Per box: Lemons, fancy, 6.50@7.00; choice, 5.00@5.50; standards, 3.00@3.50; 4.50@5.00; oranges, fancy, 5.25@5.50; choice, 4.25@4.50; limes, 2.00 per crate; tangerines, 3.00 per crate.

ALMONDS

California Almond Growers Exchange opening prices:
Nonpareil @32½, IXL @31½, Ne Plus Ultra @30½, Drake @23½.

HONEY

Jobbing prices: Extracted, Water White, 20@22 per lb.; Light Amber, 15@17; Amber, 13@14.

HOPS

1919 contracts per lb. around 60@70.

RICE

Prices per 100 lb. bag:
California: Fy., 10.50; ch., 10.25; flour, 6.25.

BEANS, PEAS

Wholesale selling prices:
Beans: Per cental: Small White, 7.25@7.50; Large White, 6.50@6.75; Lima, 14.50; Baby Lima, 13.00; Pink, 6.75@7.00; Cranberry, 7.25@7.50; Blackeye, 6.00@6.50; California Bayos, 6.75@7.00; Mexican Red, 6.00@6.50; Red Kidneys, 11.50@12.00; Garvanza, 12.00@13.00; Tepary, 2.50@3.00; Kotenashis, 5.75, in bond.
Dried Peas: Old crop, green, lb., 7½@7¾.

GRAIN AND FEEDS

Wholesale selling prices:
Oats: Red feed, 3.00@3.05; black, 3.00@3.10 per cental.
Corn: California yellow, 3.40@3.55 cwt.; Egyptian, 3.25@3.35; Milo Maize, 3.07½@3.15.
Rye, 3.25@3.35.
Barley, feed, 3.15@3.20; brewing, 3.25@3.30.
Wheat: Following are net weight prices for bulk grain, based on federal standards and grades at San Francisco Bay and Los Angeles Terminals:

	Per Bushel	Per Cental
Hard Wheat—		
No. 1	2.20	3.66 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	2.18	3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51 1-3
Club and Sonora—		
No. 1	2.16	3.60
No. 2	2.13	3.55
No. 3	2.09	3.48 1-3

For sacked grain add nine cents per bushel of 60 pounds to above price. Deduction of three-fourths of a pound is made for weight of standard grain bags. Wheat grading under No. 3 and mixed or smutty wheat will be purchased according to merit.
Mill Feed (per ton): Bran, 43.00@44.00; mill run, 42.00@43.00; Rolled Barley, 52.00@54.00. Linseed oil cake meal, nominal; cocoanut cake or meal, 41.00@42.00 per ton.

HAY

We quote today wholesale prices in carload lots as appear from dealers transfers upon the hay market—for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions:

Fancy wheat hay (light 5-wire bales)	21.00@23.00
No. 1 Wheat or Wheat and Oat hay	18.00@22.00
No. 2 Wheat or Wheat and Oat hay	17.00@19.00
Choice Tame Oat hay	20.00@23.00
Other Tame Oat hay	17.00@20.00
Wild Oat hay	16.00@10.00
Barley hay	16.00@20.00
Alfalfa hay	18.00@23.00
Stock hay	13.00@16.00
No. 1 Barley straw, bale	50@80

Citrus Markets

Los Angeles, November 12, 1919.

Valencias are bringing a wide range of prices in the Eastern markets, some as low as $1.80, the best $9. There are 1,800 cars yet in California, and shippers are faced by car shortage, contending with grape shippers in this state and apple shippers in the Northwest. The Tulare district expects to start shipment of holiday fruit immediately. The oranges are running to large sizes but the holiday trade is expected to take care of these. Florida fruit has been very slow in maturing this season and as yet has not affected sales of Californias.
Cold weather in the East has cut down the demand for lemons and there is fairly large supply of foreigns available.

Shipments

Shipment of oranges from Southern California to date since November 1, 1919: Oranges, 611 cars; lemons, 122; total 733. To same date last season: Oranges, 22; lemons 290, total 312.

PRODUCER LOOKING FORWARD

Continued from Page 649.

doubt but that their ideas would have readily been met by their employers. Their publicity department was inadequate but the employers have put a true value on public sentiment and their publicity departments have been working overtime.

With half the nation's capital invested in agriculture, there is no reason in the world why, through the proper organization, the biggest and best publicity department should not be developed to apprise the city man of the opportunities and freedom of the country and let him know how he can be his own boss and independent. Teach him how he can become a successful farmer if he is willing to combine intelligent effort and hard work. Through this method the old "back to the soil" movement would be speedily revived and production would hold pace with consumption and the country would enjoy a prosperity beyond all anticipations.

If the public moneys being spent at present on investigations of profiteering and in court proceedings against producers were diverted to a strong publicity campaign depicting the advantages of agriculture as an occupation, incomparably better results would be obtained, more moderate and steady prices would prevail; the entire nation would be greatly benefited and agitation quieted.

PANAMA TRADE

The American consul general at Panama City says that increased trade between the United States and Panama and the retention of the trade established during the war depend largely upon the observance of suggestions offered by Panama merchants, for the business of Panama consists largely of the wholesaling and retailing of imported merchandise. We must have good shipping facilities and a representative sent out to cover the field thoroughly to obtain a knowledge of the customs and manners of the people. Careful packing, prompt execution of orders, no substitutions, easy terms of credit (60 days after sight), and an intimate knowledge of Panama banking methods are necessary. In 1919 the most valuable cargoes sent to Panama from the United States were textiles and manufactures, with edible animal products and mineral oils and derivatives second and third, respectively. Our heaviest purchase from Panama was bananas, to the value of $2,467,442. Next to this came rubber, and then $707,637 worth of coconuts.

PROBABLY NOT

"I was reading, the other evening," mused honest Farmer Hornbeak, "that in China, I believe it was, the dawn comes up like thunder. But I don't s'pose the hired men there are inclined to pay any more attention to it than they do to the alarm clocks over here."

Hatching Eggs---Their Selection and Care

By Jean A. Koethen

THE history of a hatching egg might easily begin, as Dr. Holmes would have the education of a child begin, several generations back. When we consider the wonderful complexity of the forces which combine to make so small and weak a creature as a baby chick it is not difficult to realize that the selection of a grandfather or grandmother may make a world of difference in the finished product. The vigor of the germ is a factor which enters into every consideration for there is now and then a germ so vigorous that no abuse can kill it and now and then one so weak that no care can keep it alive.

The eggs from which we expect to hatch profitable layers or winners at fall and winter shows must be laid by hens that are profitable layers or winners of the blue. Like produces like, and the offspring, while in most cases it will not quite come up to the parents in quality, can be made to excel them only by the most careful mating. It is most important, therefore, that the breeders be the most vigorous birds in the flock or the most vigorous to be purchased, and that they as nearly as possible approach perfection in other respects. Better hatch from a single hen, if she is the best pattern for the flock you wish to develop, than from hens of mediocre quality.

Remember too that to a large extent the eggs of next year's pullets will be like the eggs you use for hatching. Do you want your hens to lay eggs that will run 24 ounces to the dozen? Then select good sized eggs for hatching, not overly large eggs, for they are apt to be infertile, but eggs that will themselves weigh two ounces each. Do you wish eggs of a uniform shade of cream or brown? Then select eggs of the shade you wish and use no others. White eggs, I believe, are always white, but brown eggs are not always brown. Sometimes they are cream, sometimes almost white. Select the shade you prefer or the shade the majority of your hens lay and stick to that. Even then you will be disappointed sometimes in the results for hens have a queer way of throwing back in color of eggs as in other respects.

The market demands eggs that are uniform in color and size. If yours are not they will have to be graded and you pay for the grading. If you select for hatching eggs that are uniform in color, size and shape, there will be less grading to do afterwards. Avoid eggs of odd shapes or with rough, uneven surface, and do not be tempted to put in cull eggs to fill out a hatch or setting. If these eggs fail to hatch, as they may, or hatch culls, as they are more than likely to do, they are less profitable than if you had eaten them in the beginning.

Take Care of the Germ

The fertile egg contains a germ that is very susceptible to external influences. Left in the nest a few hours in warm weather it may begin to develop. If it is kept in a warm place in the house the same thing may happen. Broody hens allowed to stay on the nest for several days have spoiled many a hatching egg. On the other hand, if the egg is chilled the germ is just as certainly injured. Hatching eggs should be taken from the nest soon after they are laid and kept in a temperature approximating 50 degrees. A dry closet or cellar is the best place.

In what position does the germ rest most comfortably? Some say on its side. Others keep all hatching eggs in a rack with the large end up. Since the hen that steals her nest and fills it an egg a day or less is obliged to leave her eggs lying on the side, we may safely conclude that this position is as good as any.

More important, probably, than the position in which it rests is the rule so often given and so often neglected, that the egg should be turned every day. This is simply to keep the germ from settling down against one side of the shell and adhering there. Turning the egg daily in any direction is sufficient. After incubation is commenced this daily turning is just as necessary and probably more necessary than it was before. Some incubator manufacturers provide an extra tray with the instruction that the eggs are to be turned from one tray to the other twice daily. Others advise rolling the eggs about by hand. It does not matter just how it is done if only the position of the germ is shifted from time to time. The hen rolls the eggs about under her wings with her beak, and it is a matter of common observance that the hen that sits "tight," rarely moving on the nest or from it usually brings off a smaller brood than the lively hen that keeps her eggs moving and airs them frequently.

Do Not Keep Eggs Too Long

The most important rule connected with the care of hatching eggs has to do with the length of time they are kept before incubation begins. More hatches are spoiled, I believe, by keeping hatching eggs too long than in any other way. An egg that is not turned while it is waiting for inbucation may still produce a husky chick, but an egg that is kept more than two weeks will rarely if ever hatch. Whether this is because of the evaporation of the air in the cell or because the germ can live only a certain length of time the fact remains that every day an egg is kept after the first week lessens its hatchability. Two weeks is the utmost limit of time and only in an emergency should eggs be kept more than ten days. We are told that it is better for them to rest a day after they are laid before being put in the incubator. Why this should be the case I do not know, and I have my doubts if it is so. At any rate, the sooner after the first 24 hours incubation is commenced, the better chance of a good hatch. This is extremely important. It is far better to set a small number of eggs that are fresh and fully hatchable than to set a full setting a third of which are too old to hatch.

EGG LAYING CONTEST

Storrs, Connecticut, October 31, 1919.—Report for the week ending October 30:

A pen of Barred Rocks from New York won the eighth international egg laying contest conducted by the Connecticut agricultural college at Storrs. For the year ending October 30, the ten pullets in this pen entered by Jules F. Francais of Westhampton Beach, Long Island, laid 2022 eggs. This was the only pen in the entire competition to average more than 200 eggs for each of the ten hens. The winning pen has led all comers for the last 32 weeks and won in spite of the fact that one of their number went on strike last July and has not laid an egg since. This is the second time that Barred Rocks have outlaid all competitors as can be seen from the following list of winners and their records in the contest at Storrs during the past eight years:

1912, White Leghorns (5 birds), F. G. Yost, Sayre, Pennsylvania, 1,071.

1913, White Leghorns (5 birds), Tom Barron, Catforth, England, 1,190.

1914, White Leghorns (10 birds), Francis F. Lincoln, Mt. Carmel, Connecticut, 2,088.

1915, White Wyandottes (10 birds), Tom Barron, Catforth, England, 2,072.

1916, White Wyandottes (10 birds), Obed G. Knight, Bridgeton, Rhode Island, 2,265.

1917, Barred Plymouth Rocks (10 birds), Applecock Farm, Fitzwilliam, New Hampshire, 2,119.

1918, Oregons (10 birds), Agricultural College, Corvallis, Oregon, 2,352.

1919, Barred Plymouth Rocks (10 birds), Jules F. Francais, Westhampton Beach, Long Island, 2,022.

There were 1,000 birds in the contest of 11 different breeds and varie-

Adams Pipe Works
Bay and Mateo Sts. Los Angeles, Cal.

ties and from 15 states and three of the Canadian provinces. They laid a grand total of 145,462 eggs. The following table shows the number of birds in each of the four principal classes, the average individual egg yield for the year and the general average for all varieties that participated in the contest.

500 Leghorns	149.7
220 Plymouth Rocks	147.5
100 Rhode Island Reds	147.3
130 Wyandottes	134.8
50 Miscellaneous	119.1
1,000 Average all breeds	145.5

The best individual work was done by White Leghorn hen No. 522, owned by S. G. McLean, South Glastonbury, Connecticut. This hen laid more eggs than any other hen in the contest. Her record for the year was 260 eggs. Laurel Hill Farm's Rhode Island Red No. 402 from Bridgeton, Rhode Island, was best in her class with a score of 258 eggs. Two Barred Rock hens, Nos. 46 and 47, from Laurel, Quebec, tied for first with a score of 235 eggs each. Curtis L. Allen's hen No. 275 from Nicholson, Pennsylvania, was at the top in the Wyandotte division with a yield of 238 eggs. The following list shows the 20 best pens in the order of their production, also their records for the year.

Jules F. Francais, Barred Plymouth Rocks, 2,022.

Laurel Poultry Farm, Laurel, Quebec, Barred Plymouth Rocks, 1,918.

J. Frank Dubois, East Lynn, Massachusetts, White Leghorns, 1,867.

Kirkup Bros, Mattituck, New York, White Leghorns, 1,845.

D. Tancred, Kent, Washington, White Leghorns, 1,833.

Deer Brook Poultry Farm, Short Falls, New Hampshire, Rhode Island Reds, 1,828.

Laurel Hill Farm, Bridgeton, Rhode Island, Rhode Island Reds, 1,825.

James O. LeFevre, New Platz, New York, White Leghorns, 1,789.

Howard R. Sullivan, Hartford, Connecticut, Barred Plymouth Rocks, 1,774.

Ingleside Poultry Farm, Palenville, New York, Barred Plymouth Rocks, 1,737.

Mrs. J. L. Thuesen, New Haven, Connecticut, White Leghorns, 1,735.

Agricultural College, East Lansing, Michigan, Barred Plymouth Rocks, 1,730.

Hilltop Poultry Yards, Suffield, Connecticut, White Leghorns, 1,728.

S. G. McLean, So. Glastonbury, Connecticut, White Leghorns, 1,724.

Chas. H. Lane, Southboro, Massachusetts, Rhode Island Reds, 1,714.

Mount Hope Farm, Williamstown, Massachusetts, White Leghorns, 1,713.

R. Lindsay Ireland, Louisville, Kentucky, White Leghorns, 1,695.

W. Bradley, Langford, Pennsylvania, White Wyandottes, 1,667.

Poultry Queries

Conducted by J. A. Koethen

Worms in Chickens

Please tell me what to give my chickens for worms.—Subscriber, Strathmore.

Tobacco is the only worm remedy now recommended by the California station. Until recently Dr. Beach and the other experts advised making a decoction by steeping in water sufficient to cover a pound of tobacco stems for each 100 birds for two hours and with this moistening a light feed of mash. Now their treatment is even more simple. A pound of tobacco powder is thoroughly mixed into 50 pounds of dry laying mash and this is kept before the hens till all symptoms of worms have disappeared. If the moist mash is used it should be fed after the birds have fasted 24 hours and should be followed two hours later by another very light meal of mash moistened with water in which Epsom salts has been dissolved, 11 ounces for 100 fowls. It is claimed that the dry tobacco may be used indefinitely in the mash without harm to the birds or to egg production.

Lice

What will rid poultry of lice?—Subscriber, Strathmore.

There are three methods of getting rid of lice, dusting, greasing and dipping. Of these dusting with a good strong powder is generally preferred. There are several such powders on the market for adult fowls. For young chicks buhach powder is considered safest. A home made powder made by mixing three parts gasoline and one part crude carbolic acid and adding plaster of paris till the moisture is all absorbed is highly recommended by the Maine station. If greasing is preferred try blue ointment diluted with eight times its weight of lard or with vaseline half and half. This second preparation is quite strong and must be used with care, a bit the size of a pea being rubbed about the vent. Dipping with a solution of sodium fluoride has been recently recommended, but no dip should be used in any but the warmest weather.

TO PREVENT ROUP

By Jean A. Koethen

Fall, with its warm days and chilly nights and rapid changes of weather, is the time when roup is most prevalent. A little care now in protecting the birds may keep them free from this troublesome disease the winter through. A little neglect may result in chronic colds that will last till spring if they do not sooner terminate the life of the bird.

First of all, see to it that the birds have plenty of fresh air at night. A closely shut up chicken house is a regular roup breeder. If you have a house that is not open in front, open it. Take out one side. That much anyone can do.

Second, look out for knot holes and cracks through which a draft may blow on the heads of the hens. A piece of heavy wrapping paper or an old burlap sack tacked over such a place is better than nothing, but a sound piece of battening is better still.

Third, clean up. I trust there is no reader of the Cultivator who does not clean his droppings boards at least twice a week. You cannot have fresh, pure air in your roosting house, no matter how well ventilated it is, if the birds have to roost over a pile of filth. Carry out old, dirty scratching litter and replace with clean straw or leaves or sand. Cover the droppings boards with sand or dry dirt. Spade up the yards. Get rid of must and mold and smells. Roup is a disease very largely of filth. Foul air, dirty houses, contaminated drinking water are all contributory causes.

Fourth, mend that leaky roof. Dampness in the chicken house is almost as prolific a cause of roup as filth. If the house is so located or constructed that water can run under the walls, bank up or put in a cement foundation. Keep the birds dry in rainy weather.

Fifth, see that they have protection from the north winds which are sure to blow before winter is over. If the house has its back to the wind the birds may be sufficiently protected. If it has not some windbreak should be erected. Lumber, even at present prices, is cheaper than an epidemic of roup.

EVERY-DAY HELPS

We all want friendship, but are we always worthy of it?

Something is lacking in the courtesy of one who makes a practice of being late.

The things we admire pretty nearly reveal what we are.

There may be nothing sensational or brilliant in just keeping on doing what is right, but it is the sort of faithfulness that counts in the end.

Only those pleasures are safe that leave sweet memories, instead of uneasy ones or half regrets.

Semi-Solid Buttermilk

Makes 'Em Grow Fast

Feed your hogs and poultry semi-solid buttermilk. It keeps them healthy and gets them to market earlier.

Semi-solid buttermilk is pure creamery buttermilk, with nothing added—only the water is taken away. It is not modified by the addition of sulphuric acid or any other preservative. Its own NATURAL LACTIC ACID keeps it fresh.

We Guarantee Every Barrel of Semi-Solid Buttermilk.

We guarantee that semi-solid buttermilk is pure and unadulterated, sterilized and pasteurized. It is a SAFE feed, and you will be satisfied with the results from feeding it.

Saves Grain, Saves Time, Saves Money

Saves GRAIN, because it balances the grain ration. Saves TIME because hogs and poultry fatten quicker when fed semi-solid. Saves MONEY because you don't pay freight on the water content of the buttermilk, and you don't have to feed so much high-priced corn.

Semi-Solid Buttermilk Is Essential

for BABY CHICKS; raises every one; keeps them healthy and vigorous. No sickly or dead chicks. TRY IT.

FOR LAYING HENS—The egg production increases at an astonishing rate. Keep accurate account, and TRY IT.

POULTRY FOR MARKETS—Milk-fed chickens reach market first, with choice, firm, white flesh. TRY IT.

We know what SEMI-SOLID BUTTERMILK will do. Don't be skeptical, but try it, to be convinced.

A carload per week is consumed in the Petaluma District alone.

Semi-solid buttermilk is put up in 500-lb. barrels, half barrels, quarter barrels and 10-gal. kegs. Have buttermilk when you want it. Semi-solid keeps in any climate, any length of time.

Order from your dealer. If he can not supply you, send your order to Dill-Crosett, Inc., 235 Pine St., San Francisco, and we will supply you direct from our factory at Benicia, California. You pay on receipt of the goods.

WHITE LIGHT FROM KEROSENE
Beats Gas or Electric

Agents Wanted

Make your home bright and cheerful, **saving one-half** on oil. Government and leading University tests prove this wonderful new Aladdin nearly five times as efficient as best round wick open-flame lamps. **Burns 50 hours on one gallon** common kerosene (coal-oil). No odor, smoke or noise, no pumping up, easy to operate, won't explode. WON GOLD MEDAL. GUARANTEED. Prove for yourself, without risk, by

TEN NIGHTS FREE TRIAL

that Aladdin has no equal as a white light. If not satisfied, return at our expense. $1000 given anyone showing us an oil lamp equal in every way to this NEW MODEL 8 ALADDIN.

GET YOURS FREE! We want one user in each locality to whom customers can be referred. In that way you may get your own without cost. Be the first and write us quick for **10 DAY FREE TRIAL OFFER** and learn how to get one FREE.

MANTLE LAMP CO., 100 Aladdin Building, Portland, Ore.
LARGEST KEROSENE (coal oil) MANTLE LAMP HOUSE IN THE WORLD

Make big money apare or full time. Our easy selling plan makes experience unnecessary. We start you without money. Sample sent for 10 days trial and **GIVEN FREE** when you become a distributor.

Right on the Job!

Like an axe "on edge", these good tires are always ready for service. Ready to pick up and carry on and keep *going* to the end of the day's work.

No fussing nor fooling with United States Tires. They are built for long hard service. They stand up under the roughest usage. They make no *excuses*.

There are five types of these burly, rugged, rough and ready tires,—one for every need. If you want extra work, and extra miles, and extra *economy*—

Stop at the nearest United States Tire Sales and Service Depot. There you will find good treatment and good *values*.

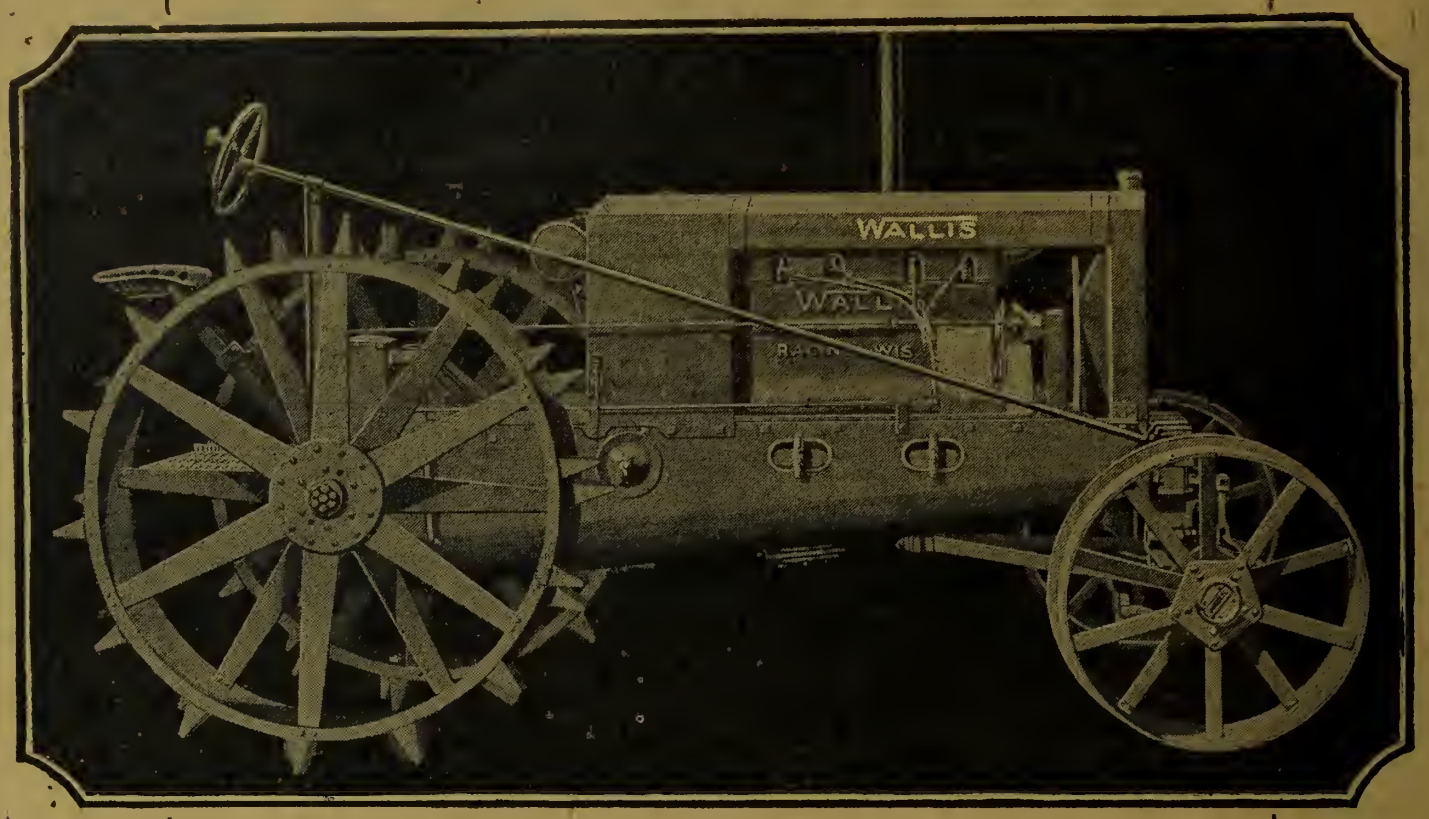
Let Our Hearts be Filled with Thanksgiving

"There shall be an handful of corn in the earth upon the top of the mountains; the fruit thereof shall shake like Lebanon; and they . . . . shall flourish like grass of the earth."

WALLIS

America's Foremost Tractor



How Long Will Your Tractor Last?

THE important feature for you to ascertain when selecting a tractor is durability—long life. Will it last?

In the Wallis the question is answered for you in an unrivalled record of service. This "quality" tractor is today recognized everywhere as the one great, dominating tractor success.

For over 12 years the Wallis has been serving on American farms and throughout the world.

Wallis advanced ideas of tractor design, light weight, simplicity, durability and economy have been proven more than practical. This master tractor has unmistakably proven its ability to do the work demanded of it year after year. It has power. But, more important, it has stamina.

The Wallis "valve-in-head" engine—with completely machine finished combustion chambers—the wonderful "U" frame—the cut and hardened steel gears, fully enclosed and running in a constant bath of clean oil—the oversize bearings—the exact machining of every part and the unusual care in every step of Wallis building, are responsible for this tremendous success.

Wallis has proven that the rough work required of the farm tractor demands the finest materials and most accurate workmanship. Long life lies in quality and design, not in bulk or heavy weight.

Wallis users—who know that after years of service the Wallis is as efficient as ever—readily confirm this fact. And phenomenal records of low cost plowing and low upkeep per year of service attest to the economy of Wallis operation.

Naturally, the Wallis is in great demand. Men realize that it is a profitable investment because its service is constant.

If you want a Wallis for next Spring, today is not an hour too early to see the local Wallis dealer or write us.

Arsenical War Babies

By Geo. P. Gray

THE time will soon be here when the wholesale houses will be laying in their stocks of arsenicals and will be receiving inquiries from customers about possible substitutes for lead arsenate. The writer has taken a keen interest in following the trend of thought in regard to the newer insecticides but has always advocated conservatism in their adoption. When inquiries have come in about the newer arsenicals the advice has always been not to be in haste to try out the new things except in an experimental way. There has been so much said in the past year or two about calcium arsenate and certain other arsenicals as substitutes for lead arsenate that a discussion of the available information about them may be of interest at this time.

The desirable chemical and physical properties of lead arsenate, the only arsenate to have come into general use in spray practice, has led to a search for other arsenates which would meet the insolubility and stability requirements but be of higher poison content and of greater toxic value. The higher prices during war times, the concerted effort of the nation toward conservation of our resources, and the unjustifiable talk of probable shortage of arsenicals, all served as an added stimulus to thought and experiment in this direction. The heavy combining weight of lead compared to the lighter calcium and magnesium and the cheapness of these latter elements occurring so abundantly in nature as limestone and magnesite, are all facts worthy of note and naturally focused attention to calcium and magnesium arsenates, particularly the former, as possible substitutes for lead arsenate. Both compounds are known to be nominally insoluble in water, and being salts of an acid stronger than carbonic, one would not expect them to be decomposed by carbon dioxide when exposed to the weather. Directions have been published for the home preparation of calcium arsenate, the commercial material is advertised by many of the manufacturers and magnesium arsenate is widely advertised by at least one company, but it cannot be said that the status of these newer poisons has yet been established.

Calcium Arsenates

The attention of horticulturists was first directed to this material by a publication of Scott and Siegler, reporting the results of three years experiments. They conclude: "The most promising new insecticide developed during the course of the experimental work is arsenate of calcium. This arsenical may be manufactured at less cost than arsenate of lead, or may be readily prepared at home. During the seasons of 1912 and 1913, arsenate of calcium gave encouraging results. In 1914 a commercial arsenate of calcium paste in combination with lime-sulphur gave very satisfactory control of the codling moth. While arsenate of calcium may have certain limitations, it will doubtless prove of value for the control of chewing insects on certain host plants."

Use

The United States bureau of entomology considers it a safe arsenical for use on plants whose foliage is not tender, such as apple, pear, grape and many vegetables, but not on peach, cherry, plum, or other stone fruits. The growers in general have been wise in hesitating to adopt this new remedy as a substitute for lead arsenate which has given such good satisfaction for more than 25 years. So far as known to the writer, calcium arsenate has not come into general use except in Nova Scotia. It is stated by Sanders that in 1918 the orders for this material in the Annapolis Valley, Nova Scotia, exceeded those for all other arsenical insecticides combined. According to his investigations and observations, when calcium arsenate is used alone on apples the results are usually disastrous, causing a yellowing and burning of foliage. It was found, however, that when mixed with lime or with lime-sulphur solution the injury was greatly reduced or prevented. Foliage injury was much less when calcium arsenate and lime-sulphur solution were used than when lead arsenate and lime-sulphur solution was the combination spray employed. The chemical compatibility of the former combination spray and the incompatibility of the latter (formation of troublesome black sludge of lead sulphide) together with less cost and higher poison content, have caused this investigator to become an enthusiastic advocate of the use of calcium arsenate.

Properties

The chemical and physical properties and method of preparation of calcium arsenate have been studied by Robinson, Holland and Buckley, Haywood and Smith, and Scott and Siegler. Theoretically the number and

The Fifteenth Arizona Fair

By M. E. Bemis

ARIZONA'S fifteenth territorial and state fair is now history. Of the 15 fairs that have been held I believe that I have attended the last nine or ten. I have seen many changes in a decade. Ten years ago the number of people who drove to the fair in automobiles was comparatively small; now the number who come from the country by any other means of conveyance is small indeed. Even many of the Indians drive in from the reservations in autos. Then the so-called desert auto race from Los Angeles to Phoenix was the big event; now the daredevil stunts of the bird men seem tame in comparison to those endurance tests of a decade ago.

Progress in the development of agriculture and livestock is even more marked than in means of transit. We had then only a few herds of pure bred cattle, so few that they were something of a rarity; now pure bred herds dot the farm lands all over the state. Long staple cotton then had not been grown on any farm except the experimental farms at Sacaton and at Yuma; now it is grown on 95,000 acres in the state and the products of these acres bring the farmers close to $20,000,000. Tractors then were big, cumbersome steam machines, impractical for any except the biggest farms; today no up to date farm of 100 acres or larger is considered complete without a tractor, and many smaller farms find their use economical.

"Bigger and Better" used to be the motto of the Arizona state fair commission. For many years each succeeding fair was bigger and better than its predecessor; then came the big war with its consequent worries and distractions that diverted people from the usual fair attractions and cut down the attendance. This year in point of attendance the fair was bigger than any preceding it; in exhibits of livestock and farm products there have been fairs that have excelled this last one.

There were many splendid animals shown, however, and many fine products of the soil. In an educational way there were many things to instruct, and the visitor to this year's fair must have gone back home wiser in many ways unless he were blind or directed his eyes to the race track and midway attractions alone.

In beef cattle there was a good showing. W. B. Mitchell of Marfa, Texas, exhibited a herd of 75 head of registered Herefords. He divided honors in this breed with C. E. Schilling of Wilcox, Arizona. The grand champion bull of the show was owned by this breeder. Ayrshires were shown by A. C. MacMinn of Phoenix and L. A. Johnson of Mesa. Jerseys were shown by Grimes Brothers of Phoenix, W. H. Bukey of Mesa, Wm. Bradshaw of Phoenix and Clyde Hussey of Phoenix. Holstein-Friesians were shown by John Bradshaw of Phoenix, the Tempe Normal School, and A. C. MacMinn of Phoenix. Many of the best cows of this breed have been shipped out of the state within the past year, and while some fine animals were shown the exhibit in dairy cattle has been better in some former fairs.

The exhibit of hogs was better than for several years, overflowing into the sheep barn. H. W. Haines of Casa Grande, Arizona, was there with some of his prize Poland Chinas, one of which weighed 900 pounds. The Winsor Ranch of Bonita, California, had some fine Duroc-Jerseys. Homan's Hog Farm of Ysleta, Texas, also was an out-of-state exhibitor of this popular breed. Mrs. George Lane and the Southwest Cotton Company of Phoenix were also exhibitors.

The sheep and goats were not there in the numbers sometimes seen, but good specimens were shown by several exhibitors, including the Grand Canyon Sheep Company of Flagstaff, The Sanford Sheep Company of Seligman and the University of Arizona. Aubrey Gist of Skull Valley, Arizona, one of the best known breeders of Angora goats in the United States, had some of his choice animals at the show.

The poultry show was worth while so far as quality is concerned, but not so large in numbers as in some former shows. White Leghorns led in numbers, with Rhode Island Whites second. There were quite a few out-of-state birds. A larger display of rabbits than common helped to increase the interest in the poultry department.

Tractors and farm implements occupied a considerable section of the fair grounds. Tents were erected to house the various machines, and the crowds of farmers that thronged them gave ample evidence of the importance of modern machines on the well kept farms.

In agricultural exhibits as well as livestock the display was not all that had been expected. Possibly fashions in ideas are changing. Possibly there was the thought that the proportionate prizes offered for the best pumpkin and for the fastest horse on the track were not equitable and that the horse was the more favored. Perhaps the producers were too busy to bother with preparing an exhibit for the doubtful chance of winning a dollar or two. The people that go to fairs seem to look for these things though and are disappointed if they don't find them; a disappointment that may, and may not, be forgotten in watching the races. If fairs are worth while then it would seem that some means should be used to get out exhibits of the best in livestock and products of the farm and orchards, though I cannot say just what those methods should be, but if it is necessary to increase the size of the purses for the races, in view of the high cost of production, might it not be still more advisable to raise the value of the premiums offered for cows and corn, for chickens and cotton, for hogs and for wheat.

The government exhibits and the exhibits of the several departments of the state university, experiment station and the agricultural extension workers were entertaining, instructive and altogether worth while. There was much that could be learned in a brief visit and far more that could be learned if one had time to stop, look and, in some cases, listen.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

The past year has been one of bountiful crops. The corn fields and the orchards and all animal kind have united apparently in the endeavor to overcome man's destruction. There have been failures and there has been suffering, as has been the case every year since time began, and today the world is endeavoring to peer into the future and learn of next year rather than to consider the blessings of the past. It is a time for faith in the future and thankfulness for the gifts of the past.

LABORER OF TODAY

Dean Van Norman referred to tbe labor question as one of the live questions of today, and from an unusual angue. The laborer of today is the land owner of tomorrow. If conditions are created which make labor attractive to the brighter American boys of today tbey will become the land owners. If, upon the other hand, farm labor is relegated to another race of people that race will ultimately own our property. Californians are beginning to appreciate this fact. There is no necessity for a movement to urge people back to the land, but there is necessity for creating conditions which will offer inducements on the farm to the boys already there and struggling for a chance to stay.

This fact has long been appreciated, but the time has come when the thinking should be done out loud, and, better, that there should be effective action.

WATCHING CALIFORNIA

Mr. Easton, a representative of the London Times, is making investigation at California's only state land settlement, and before going on and making other investigations in Australia will send to "The Thunderer" his impressions and account of methods of work at Durham. The settlement is less than a year old, but California's fame is already extending because of it. Several other states of the Union have sent representatives to Durham, one, the son of a governor, having worked on the settlement in order to secure first hand dependable information. Now comes selection of a new tract located near Turlock, and on this tract work has already begun to prepare the 8,000 acres for the making of a large number of farm homes. The taxpayers of California are not paying for these lands for the improvements upon them; every dollar is to be returned by the purchasers. The credit of the state is used, it is true, but even the costs of making collections and superintending the work is passed to the purchasers. But amongst the many advantages there is no addition to these costs in the form of excessive charges of real estate agents or profits to the promoter. And again, the welfare of the state and of these particular purchasers is safeguarded by the employment of advisers, farm engineers, soil experts, farm planners and others.

Mr. Easton's own country, Australia, has similar examples of wisdom in land settlement, but we believe none which have great advantage over that of California.

THE DOLLARETTE

Frank Swett remarked at the recent state convention that the dollar has become a very diminutive dollarette. The amount of corn and bacon, of calico and wool stuffs it will purchase is proof of the contempt in which it is held. And of course the farmer gets tbe blame.

On this point we will give our readers moro of what Mr. Swett said, in a later Cultivator. His readable story in Frank Swett style, delivered at the convention, took the 60 cent can of pears for which the consumer laid down a 50 cent piece and a ten cent piece with a grumble at the immense profit the pear grower was getting; the 50 cent piece was dissected and found to belong entirely to the canner, the transportation company, the can maker, the sugar factory, the laborer, and to so many others that there was nothing whatever left for the farmer. However, he was content to walk away with ten cents, but even of this he had to give up so much for fertilizer, for the labor of cultivation and irrigation and other farm expenses that ultimately but four cents of the 60 remained in his pocket.

In other words, "de ducks gets it all," which reminds us of Mr. Powell's story at the convention. Rastus was congratulated on his big crop and the big prices of cotton, but he looked serious and said, "De ducks gets it all." Ducks not being known to have a specially strong liking for cotton, he was asked for an explanation. He said: "Well, Boss, it's thisaway. My old mule he up and laid down and died. Massa he bought me a new mule. When he settles up for de cotton he tells me 'bout dat mule and deducks $100. Den we had to have bacon and hominy to live on and he deducks some more. Jomima had to have a calico dress and Massa he deducks some more."

The pear story and the duck story go together—"de ducks gets it all."

FROM THE PRESIDENT'S PROCLAMATION

A year ago our people poured out their hearts in praise and thanksgiving that through Divine aid the right was victorious and peace had come to the nations which had so courageously struggled in defense of human liberty and justice. Now that the stern task is ended and the fruits of achievement are ours, we look forward with confidence to the dawn of an era where the sacrifices of the nations will find recompense in a world at peace.

But to attain the consummation of the great work to which the American people devoted their manhood and the vast resources of their country they should, as they give thanks to God, reconsecrate themselves to those principles of right which triumphed through His merciful goodness. Our gratitude can find no more perfect expression than to bulwark with loyalty and patriotism those principles for which the free peoples of the earth fought and died.

During the past year we have had much to make us grateful. In spite of the confusion in our economic life resulting from the war, we have prospered. Our harvests have been plentiful and of our abundance we have been able to render succor to less favored nations. Our democracy remains unshaken in a world torn with political and social unrest. Our traditional ideals are still our guides in the path of progress and civilization.

These great blessings, vouchsafed to us, for which we devoutly give thanks, should arouse us to a fuller sense of our duty to ourselves and to mankind to see to it that nothing we may do shall mar the completeness of the victory which we helped to win. No selfish purpose animated us in becoming participants in the world war, and with a like spirit of unselfishness we should strive to aid by our example and by our cooperation in realizing the enduring welfare of all peoples and in bringing into being a world ruled by friendship and good will.

CAR WINDOW NOTES

When one travels by train from a point 150 miles north of the southern boundary of a state to within about the same distance of its northern boundary, and the trip occupies a full 24 hours, it seems it must be a state of some size. California is that state, and on such a trip several things come in through the car window.

* * *

Most glorious of these is the vision of reds, yellows and browns in canyons and on hillsides. The alders, the poplar and many other trees show these gorgeous colors. Contrasting with these is the bluish green of the juniper.

* * *

The brown has been accentuated by the need for rain. The soil, the trees, the grasses which would paint in green the pastures, the livestock, all are calling for rain.

* * *

Here and there 12 horse gangs are fallowing the ground, making ready for seeding and for the belated rain. More often the big 75's or smaller tractors are being used.

* * *

Besides tractors in the field there are tractors on flat cars. Many of these in obscure little towns are on railway sidings where the only improvement within sight is a great warehouse, and, again, in larger numbers on the cars or in the loading in the town where many tractors are made. As time passes the number of these tractors which will come through the car windows of California will increase.

* * *

A great trestle like structure where an endless belt or carrier is taking cakes of ice along its several hundred feet of length. Occasionally a car of California perishables and men with ice hooks dexterously giving a push or a pull while the ice drops into the refrigerator end of the car. It is simply one of those devices contrived by man to save of that most expensive factor in production, labor.

* * *

A California state built highway borders much of the railway through the great valley. Occasionally a low wheeled wagon in which is wood, tank for heating asphaltum and various tools, accompanied by smells of which the passing train is permitted to partake, indicates up-keep work which makes for California's well kept roads This continual repair work explains why express train speed means less as an expression of swiftness than does auto speed. Several times between Bakersfield and Sacramento autos came alongside and deliberately passed our swiftly moving train. Nor were these all daredevil drivers; simply business men on a business mission, if a car window look afforded opportunity for judging.

* * *

In Tokay Town they are still harvesting grapes. Thousands of boxes are still scattered through vineyards, and it looked as if some of the packing houses were still working. On the other hand, flat cars were occasionally passed in which were many tons of grapes loosely dumped, apparently ready for the winery. We are wondering where they will go.

* * *

Already pruning of apricots has begun. Some orchards of two and three years show about the trees litter of pruning. Nor was this pruning so severe as in former years. "Prune longer" seems to be the slogan. Is it best? Ask us later, or, better, ask the trees when they yield their crops in a few years.

* * *

"California Almond Growers" appears on many a great packing house on sidings from Stanislaus County north. It is quite convincing proof of the several thousand tons of this delicious nut produced in California.

* * *

One wouldn't think it, but occasionally a great combined harvester comes through the car window. One wouldn't think it for the simple reason that those great machines cost a great many of the dollars which are of lesser purchasing power than formerly, hence why these magnificent machines exposed to the elements to be rusted and warped and decayed so that their efficiency is lessened? Why

* * *

Blanket men—about one a mile Seems like a lot, though no accurate count was made, but by ones and twos, and occasionally in small crowds around a railway tie fire, they were busy standing or possibly strolling and going—nowhere. Yet our labor shortage is serious.

* * *

By the roadside a long stretch of walnuts, the trunks of the trees rough of bark and black like the bark of the native, the tops showing the smooth white bark of the English or, usually called, California nut. Apparently roadside trees grafted over and made to produce valuable crops.

Cooperation the Keyword at State Convention

Editorial Correspondence

ONE word describes better than any other the tenor of addresses, discussions and actions of the sessions of the Fifty Second State Fruit Growers and Farmers' Convention now closing here in Butte County. I say in Butte County, rather than Chico, for the whole county, the whole of the Sacramento Valley, has cooperated in making the convention a success.

From the moment of opening on Wednesday morning, when Rev. Geo. T. Meeker asked divine direction for producers of food and makers of homes in California valleys and hills, as they planned for more food and better homes, to the closing moment Saturday afternoon the cooperative spirit prevailed.

Mayor Reynolds spoke of the cooperative spirit which had prevailed in preparing for the convention and the unaminous welcome which he assured us was as hearty as that which John Bidwell would have extended had he been here.

George H. Hecke, director of agriculture for California, gave as the keyword for the convention, "Cooperation." After reviewing the history and work of the department, Mr. Hecke said:

Geo. H. Hecke

Agriculture is by far the largest and most important industry in California. Figures recently prepared by this office show production values for the year 1918 as follows:

Fruit and grape crops	$171,626,000
Field and truck crops	351,400,000
	$523,026,000
Marketable farm animals	$ 67,696,955
Dairy products	54,528,056
	$122,125,011
Total agricultural and livestock	$645,151,011

The figures of 1919 naturally will exceed the 1918 production estimates by many millions and at least 15 per cent would be only a very conservative increase.

For further comparison the 1918 production values show:

Minerals	$ 37,686,072
Oil	127,459,221
Lumber	29,000,000

or that the agricultural production is more than three times as large as these three great industries combined; and it is thus very evident that the great bulk of California's economic wealth accrues to her revenues from agricultural production.

As a logical conclusion it follows that the department of agriculture, which is now charged with the protection of such an extensive industry, must expand to meet the heavy demands upon it now and increasingly in the near future.

The need for adequate assistance for agriculture has been fully recognized by Governor Stephens who has laid out his agricultural platform in an editorial, "Why We Must Foster Agriculture," which will appear in the October number of the Monthly Bulletin of the department of agriculture.

The important aspect of these questions may be gathered from the timely statements included by Governor Stephens as a part of his article: "Never before in the history of the world has the realization of humanity's utter dependence on the agriculturist been so acute as it is today."

How, then, may we promote the growth of this department of agriculture to realize the maximum benefits at this time? Let us look back upon the proceedings of years ago. It was at fruit growers conventions that the need and possibility of cooperative marketing organizations were emphasized, and where the ideas materialized which later resulted in the formation of the earlier cooperative associations, which have proved of sterling worth from every viewpoint.

The outgrowth of the cooperative idea has been the organization of growers of practically every kind of farm products and fruit, and this has resulted in placing the individual growers in a position where instead of realizing a loss for their time and work, they have been able to secure at least a reasonable profit.

These cooperative associations represent the greatest development which has come to California agriculture, and as a united body they are in a position gracefully to suggest such needful agricultural legislation and to secure the well merited attention which their projects justify. Here then are the means by which adequate assistance and necessary protection to the agricultural industry may be secured.

In the past special attention has been given to questions of labor and capital by our legislatures, and under the extraordinary stress of present conditions this is the time for agriculture to be accorded its well deserved and vital consideration. Especially is it timely that these problems be given due consideration and provided for against the coming of the 1921 legislature with its usual complement of progressive agricultural legislation. We feel that these cooperative marketing organizations form the logical bodies from which to secure such needful legislation and that the ideal method of procedure is through the creation of a legislative committee composed of a representative from each of these associations.

The reasons for the formation of a legislative committee may easily be found in the fact that our recent legislatures as a whole have been kindly disposed toward measures fostering progressive agriculture. In the past, however, no concerted effort has ever been made to bring the farmers case to the attention of the legislature in a unified way. Every agricultural appropriation bill usually has met with opposition through unfortunate misunderstanding. Under such conditions, was it not almost impossible for our lawmakers to know the great thing to be done in any given case? The very lack of concerted action on the part of the farmers, added to the uncertainty of the legislators, had inadvertently clouded the merits of the case, and it is through such ill timed and disconcerted activity that a resulting lack of support was realized in many cases.

The attention of this committee then should be turned to a consideration of the various needs, their relative importance and urgency, and some definite and workable plan prepared for presentation to the coming legislature, behind which plan the entire force of all these organizations can be placed.

Every step taken by the committee would be under the direct control of the organizations that it represents, and its work would be submitted at last to the fruit growers and farmers for approval at the next fruit growers and farmers convention, and finally to the legislators for enactment. It is certain that such procedure would suggest a proper guide to legislative consideration and one that would command respect and support from all concerned.

To summarize the principal duties of this committee:

First, it must investigate the needs of agriculture and secure concerted and definite action.

Second, it must act impartially, looking always for the opportunity to secure the best legislation regardless of what branches of the state government or individual agencies may be affected.

Third, it must enjoy absolute freedom from politics, and must avoid all reference to political controversies.

This, then, is the all important and history making step which this Chico convention may take toward the upbuilding of California agriculture. To my mind this movement bids fair to become one of the most effective steps that could possibly be taken, and is one which will maintain our agricultural industry in its rightful first place as, indeed, no other single step has ever done.

Last Session of the Convention

Meeting under the oaks in Durham Land Settlement. Judge Shields calling the convention to order.

Reveries of a Californian

The topic given to James Mills was "California Agriculture; Its Importance; the Things that Threaten It; the Need for Protection." This is somewhat of a lengthy title and Mr. Mills was inspired by it to give us a most eloquent reverie touching upon things as they were in California when he came here in the 80's and as they have grown to be in the 'teens.

Cooperation With the Punch

"Accomplishments and Possibilities of Cooperatioon" set the pace for the whole convention. It was discussed by cooperators who have succeeded in cooperating. They told not how it ought to be done by somebody else but how it has been done and is being done and will continue to be done by growers who have saved millions of dollars for themselves and their industry because of cooperation. These statements were so forceful that we hope later to give more fully than is possible in this week's limited space. These addresses were made by Geo. W. Pierce of the Almond Growers Association; F. A. Seymour of the Raisin Growers Association; Frank T. Swett of the Pear Growers Association; A. E. Sunderland of the Peach Growers Association; G. Harold Powell of the California Fruit Growers Exchange; J. H. Stephens of the California Rice Growers Association; Charles H. Gray of the California Cooperative Canneries.

An Educational Evening

Contrary to all former conventions a set program for an entire evening was only carried out at one session. One evening was given up to a banquet at Oroville, another to a banquet a Chico. However, Wednesday evening's program called for a discussion of "Function of the Junior College in Its Relation to Agriculture." This topic was handled by Dr. E. B. Copeland, president of the Chico chamber of commerce; by J. B. Lillard, state supervisor of agricultural education, and by Mrs. Elizabeth Hughes, assemblywoman of the 7th district. These speakers and the audience were unanimous in the belief that the one and one-half per cent of American young people who have the advantage of a college education shall be materially increased. To that end the junior college, not exactly carried into the home but carried into the home town of the young people of the state, will greatly increase this percentage.

Some have expressed fear that this movement for a junior college would increase the work of the high school. This it would not, though it may have a certain connection with high schools. The course will give to graduates of the high school the first two years of work which is now given in the state universities. Such schooling advantage is already provided in one California town, Ontario in San Bernardino County. This school was held by all the speakers to be an example of the advantages which should be given in every California town.

At Oroville

The next day an early start was made for Oroville, 21 miles away.

Continued on Page 689.

Agricultural News Notes of the Pacific Coast

Northern California

Butte County found it necessary to raise the coyote bounty from $3 to $5.

Onions at Stockton are selling at $4.50 a hundred and potatoes as high as $3.

There are still 1,000 cars of grapes to be shipped from the Sacramento Valley.

Sacramento shipped a car of 1,000 sacks of almonds worth $30 a sack, or $30,000.

A bass weighing 51 pounds was caught in the river at Petaluma, Sonoma County.

Hamilton City, Glenn County, is to have a large deciduous fruit dehydrating plant.

More than 5,500,000 pounds of rice were handled on the Sacramento River this season.

A Colusa County rice grower who sold 105,000 bags says it will net him about two dollars a bag.

Yuba and Sutter Counties shipped 5,000 tons of raisins, an increase of 1,600 tons over last year.

Papers filed in Sonoma County show three Japanese are directors of the Hanamura Farm Company.

There have been more than 50 prosecutions of violators of the apple standardization law in Oakland.

Wheatland, Yuba County, at one time a great hop-producing town, has hopped over to a record for deciduous fruits.

The Western Rice Growers' Company has purchased another 5,000 acres of rice lands near Nelson, Butte County.

J. W. Lightfoot at Chico, Butte County, caught a salmon out of the Sacramento River that weighed 78 pounds.

San Franciscans report the toyon or Christmas berry is becoming extinct in the north by reason of reckless picking.

Land in Colusa County which a few years ago rented for 35 cents an acre now rents for $47.50 an acre for rice culture.

The famous Hooker oak at Chico, Butte County, was 105 feet high but a stroke of lightning clipped off four feet of the topmost branch.

Every grape grower in the wine grape counties is being questioned by federal agents. Uncle Sam is after that tax of 16 cents a gallon.

Stockton is fighting to hold the headquarters of the California Bean Growers Association which the directors voted to move to San Francisco.

The Solano Courier says Warren A. Woods sold his 27 acre orchard to a Japanese and Edward Dinkelspiel sold his 60 acre orchard to a Chinaman.

The manager of the California Almond Growers' Exchange, now in New York, wires that 16,000 bags of California almonds sold there for more than $500,000.

Ten years ago a piece of land near Arbuckle sold for $60 an acre. As it was improved it sold for $125, then $210, again for $410, now for $500 and is offered for $625.

According to reports received from Chico, the value of the three principal orchard crops in that vicinity this year was $3,000,000. The crops are peaches, prunes and almonds.

Central California

Porterville has shipped 30 cars of Wonderful pomegranates.

Watsonville will ship about 100 cars of potatoes and 30 cars of onions.

The best broom corn in Tulare County is selling for $200-$300 a ton.

Lindsay, Tulare County, will hold a chrysanthemum show November 11-12.

The total pay roll for Tulare County creameries in October was $206,188.33.

Brooms from rice straw are being manufactured at Oakdale, Stanislaus County.

The 80 acre Ramm vineyard at Dinuba, Tulare County, sold for $80,000.

A 15 acre alfalfa ranch near Yuma, Arizona, brought $350 an acre for the seed crop.

Kern County is warring on the weed known as bur-nut, by name Tribulus terrestris.

Large shipments of casabas are still being sent from Ripon, San Joaquin County.

Reedley, Fresno County, is building a new cannery, the second one for that district.

The delta lands of the San Joaquin River, heretofore impassable in wet seasons, are becoming a network of good roads.

A carload of Tulare County grapefruit sold in San Francisco last week for $6 a box.

From 15,000 to 20,000 sacks of potatoes to 100 acres is the yield in Santa Cruz County.

More than 1,800 acres of prunes were planted in Tulare County in the 1918-19 season.

One shipper at Turlock, Stanislaus County, sent out 270 carloads of cantaloupes in 1919.

C. B. Hunt of Porterville, Tulare County, sold his avocados in New York for $1.50 a dozen net, or more than $100 a tree.

D. C. Mattison of Modesto, Stanislaus County, has a pineapple casaba melon weighing 16 pounds, grown without irrigation.

Four ten acre sites for experiments in citrus groves have been chosen in Tulare County by representatives of the state university.

A Santa Clara County Mission fig tree 62 years old is 62 feet high, 60 feet in spread and smallest circumference of trunk is 12 feet.

Carloads of fruit shipped from Tulare County during the season just closed: Grapes, 1,008; peaches, 63; Plums, 135; apricots, 3; figs, 1; mixed, 2.

The fire damaged almonds in the warehouse at Turlock, Stanislaus County, sold for $80 a ton, and the insurance company paid the loss in full, more than $40,000.

The Fresno County Chamber of Commerce backs the California Associated Raisin Company in its price making and has sent resolutions to that effect to Washington.

A sale of school lands will be held in Madera, Fresno, Tulare and Kern Counties during November. Madera County contains 1,440 acres; Fresno County, 4,680 acres; Tulare County, 2,070 acres, and Kern County 14,315 acres of vacant school land.

Southern California

Van Nuys reports the biggest building boom in its history.

El Centro will vote on a bond issue of $200,000 to improve the water system, fire alarm system and to build a city hall.

The honey crop was so short in Orange County that apiarists are feeding bees.

The first chilis of the 1919 crop are being shipped; the price is 16 cents a pound.

About 600 acres is the area of citrus fruits in the Fallbrok, San Diego County, region.

A party of Hindus have leased 800 acres of land near Holtville and will plant cotton.

The work of partitioning the 23,503 acre Broome ranch in Ventura County has been completed.

W. J. Stokes of Hemet, Riverside County, gathered 800 pounds of walnuts from five trees.

Cotton touched its highest price in the Imperial Valley when some sales were made at 52 cents.

The date harvest in the Coachella Valley is over and the crop was much larger than that of 1918.

Ripley is the name of a new town just started in the Palo Verde Valley nine miles south of Blythe.

Blythe in the Palo Verde section of Imperial County is bragging on a pumpkin weighing 97 pounds.

The Upland Lemon Growers will erect another packing house at Upland, San Bernardino County.

Hemet, Riverside County, shipped a car of walnuts that brought the growers a gross return of $16,098.

Planting of Bermuda onions, both Crystal Wax and Yellow, is now in full swing in the Coachella Valley.

Somewhat more than 6,000 acres of citrus trees have been fumigated in Los Angeles County during 1919.

The Old Newport Lima Bean Growers Association is the name of the latest organization in Orange County.

A caterpillar tractor with three trailers delivered a load of beans at Garden Grove, Orange County, valued at $4,000.

The Sylmar olive orchard in the San Fernando Valley, the largest in the world, is this year carrying its heaviest crop.

During September in the Whittier district of Los Angeles County 1,072 acres of oranges and lemons were fumigated.

In spite of the light frosts the Pomona Los Angeles County cannery is still running on tomatoes and believes it will continue to December.

The state highway commission denied the petition of an Orange County farmer to cut down the eucalyptus trees on the state highway in front of his property.

The supervisors of Imperial County have appropriated $3,000 for the celebrating of the opening of the San Diego and Arizona Railroad, to be held December 5-6.

For the past five years the United States department of agriculture has maintained a chemical laboratory at Los Angeles for the study of by-products of citrus fruits.

The Coast and General

The 1919 Wenatchee, Washington, apple output is 10,500 cars.

Hood River, Oregon, shipped 30 carloads of Bartlett pears this season.

Two new cider mills have started operations at Hood River, Oregon.

Long staple cotton at Chandler, Arizona, has gone to 75 cents and is still rising.

Prune growers at Mosier, Oregon, received $1,000 per acre from their orchards.

A large acreage of almonds will be planted near Yuma, Arizona, the coming spring.

A car shortage is preventing potato growers of British Columbia from shipping their crops.

Roseburg, Oregon, brags of a field of corn "15 feet high, each stalk carrying three huge ears."

In the Willamette Valley, Oregon, more than 10,000 acres of loganberries will be grown next year.

Since 1902 the Wenatchee Valley, Washington, apple crop has grown from two to 10,000 carloads.

A farmer at Punta Gorda has picked 40 good sized pumpkins from one vine and has a dozen more still green.

A carload of pears from Rogue River Valley, Oregon, sold in New York for $6.47 a box, a record price.

The Florida Grower says oranges and grapefruit are running small, requiring 200 to fill the expected 150-box.

The L. B. Harris ranch near Sunnyside, Washington, was purchased by the Carnation Milk Company for $62,000.

Fewer potatoes than common are said to have been stored in Coconino County, Arizona, the potato section of the state.

Hood River apples to the number of 4,000 boxes comprised the first shipment to the Philippines from Seattle last week.

A news item states the rice harvest on the west coast of Florida is completed, much of it yielding 40 to 50 bushels to the acre.

A late Florida hurricane aided the asparagus growers on low seaside lands $100 an acre by covering the land with salt spray.

An official survey of Florida reveals 11,356,414 citrus trees of which 8,000,000 are of bearing age. The acreage covered is 160,397, owned by 47,401 persons.

A young Bartlett pear at Cottage Grove, Oregon, bore four crops this summer. The first was very large, diminishing in the fourth to the size of hazel nuts.

The castor bean growers of this country are to be paid about four and a half million dollars for losses incurred in trying to produce a crop for the government.

A new organization of cotton growers, known as the Arizona American-Egyptian Cotton Growers Association, has been formed in the Salt River Valley of Arizona. It is expected to do for the cotton growers what the Fruit Growers Association of California has done for the fruit growers of that state in the way of marketing, credits, shipments and many other features.

"THE use of Goodyear Cord Pneumatic Truck Tires on my truck has saved me a great deal of time and money. They are an economy all around in general farm work and livestock hauling—especially over farm land and rough, slippery country roads."—Mr. W. H. Duley, Livestock Farmer, Starks, Maine

THE photograph above was taken January 3rd, 1919, on the livestock farm of W. H. Duley, ten miles from Starks, Maine.

At that time Mr. Duley told us that he had been hauling on Goodyear Cord Pneumatic Truck Tires during weather that had stopped local solid-tired trucks.

The tractive Goodyear Cords had enabled his truck to overcome fierce road conditions and, in addition, to pull solid-tired trucks out of mire and up stiff grades.

The easy-rolling Goodyear Cords had enabled his truck to average three and four trips to town per day, an amount of hauling which would have required three teams.

The cushioning Goodyear Cords had enabled his truck to deliver decidedly good mileage on gasoline and oil and to remain in excellent mechanical order despite the bad going.

On top of all this, the tough Goodyear Cords had outlasted neighbors' solid tires which wore down rapidly due to spinning in the gravel on the steep hills.

This latter performance particularly reflects that long pioneering work with which Goodyear has developed Goodyear Cord Pneumatic Truck Tires for very severe hauling duty.

PLANT
your cover crop now

Every orchardist and rancher knows the value of a good cover crop. It loosens up the soil by adding humus. It prevents the winter rains from washing. And—if it's one of the leguminous plants such as

Woolly Podded Vetch

adds free nitrogen to the soil equivalent, on the average, to 1,000 pounds of nitrate of soda to the acre.

Woolly Podded Vetch is a purple-flowered winter vetch. It grows luxuriantly and covers the ground thoroughly, affording ample body for green manure. It should be planted after the first fall rains—60 to 70 pounds to the acre.

Morse's seeds are soil tested—*they grow*. They are true to strain, pure-bred, germinating seeds, free from all foreign matter.

Early planting yields the heaviest crops. Write today for quotations on Vetches, Melilotus, Clovers, Field Peas, etc. Write *now!*

C. C. MORSE & CO.

733 Front Street San Francisco

Have you tried Morse's Mixtures of Pasture Grasses? No expense has been spared to get the best pasture mixtures. Prices on application.

County Horticultural Commissioners in State Convention

Editorial Correspondence

THE aggregation of conventions which responds to the call for the State Convention of Fruit Growers and Farmers always has for its forerunner the state convention of county horticultural commissioners. This Chico convention was no exception. The commissioners were here—nearly all of them—and in occasional instances, deputies and inspectors. How to make the best bug policeman and standardization cop was the main topic. But occasionally a restiveness appeared to sweep over the assemblage and some commissioner moved that "we go into executive session." Then President Seuiberger looked genial and said: "Our latch string is no longer out; newspaper representatives and others who do not find this environment congenial may have relief by closing the door—from the outside."

So far as I could learn there was no furniture broken up during these sessions. There was some peekin' under, or over, or leaking at least, for the Chico papers came across with full accounts of these "executive" sessions and no one seemed to worry.

How to enforce standardization laws, secure honest pack, protect the consumer and create a greater demand for the products of California, whether of nursery, orchard or field, gave to the commissioners opportunity for variety in oratory and more opportunity for downright earnest discussion.

For instanee, one commissioner reported finding boxes of apples bearing certificate of inspector in which were wormy appies in abundance. Arrest and fine followed, but how can such violations of the law be prevented? Chief Standardizer Avery Hoyt said that nothing could prevent an apple shipper purchasing the stamps for using on apple boxes. These stamps are sold to shipper and the proceeds of the sale pay for services of inspectors.

Regarding the News Letter issued by the state department and of which Bronte A. Reynoids is editor, the commissioners thought family affairs should be omitted and information of real value in pest control or in standardization should be given place.

Weed control on state highways is deemed in the province of the state highway commission. There are millions of star thisties along some of the highways, which make it impossible for acreage owners alongside to eradicate the pest. A committee consisting of Commissioners Sharp, Bremner and Gorton was instructed to petition the state highway commission to eradicate weed pests.

W. C. Jacobsen, superintendent of rodent control, is supposed to own all the ground squirrels of California, but he doesn't keep them under proper control and they trespass. They trespass without conscience or consideration of H. C. L. for each ground squirrel in the state has an appetite which costs the farmers of the state approximately $30 (yes, that's no mistake of the printer, it's 30 dollars, not 30 cents).

That figure is taken from an address before the horticultural commissioners, which was made by Dr. W. T Harrison of the United States public health service. Dr. Harrison dwelt largely upon the economic aspect of the squirrel control though his work has to do with the suppression of the pest because of its direct connection with that deadliest of all diseases, bubonic plague. He referred to the recent incident, tragedy rather, in which one bubonic plague infected squirrel was the cause of 15 deaths in Oakland. A Mexican went into the hills and killed some squirrels. It is supposed one of these was infected with bubonic plague germs which in the skinning of the squirrel may have infected some wound on the hand. In any case the Mexican died, as did 14 others. Of the number were two doctors and two nurses, who had attended the patients. Most of these deaths were from pneumonic plague which developed from the original bubonic. In pneumonic plague there is invariably a 100 per cent death rate.

Bubonic plague infested squirrels have been found in ten California Counties at some time during the past four or five years. Most of these cases are found within a few miles of San Francisco harbor.

One county alone, Tulare, in which there never has been any bubonic plague, has used during the past year seven cars of carbon bisulphide for smothering squirrels, and Dr. Harrison estimates that the money invested in these seven cars has been returned to Tulare County, in crops saved, at least 50 times.

There has been spent in the state of California $375.000 in squirrel control. and it has saved foods and fuels to the value of at least $5.000,000.

Statistics

In the matter of gathering statistics there is diversity. Shall an acre on which is planted, say, a number of walnuts interset with peaches and again interplanted to beans, be reported in as an acre of walnuts, also an acre of peaches, also an acre of beans? Or shall it be a third of an acre of each, or shall it be by the number of plants. Discussion of various ramifications of these questions afforded many a happy hour for the commissioners.

And still they hadn't talked enough, so after the banquet where they "et a lot, talked a lot and said something," they

Resolved. Whereas, there are many matters of vital importance to the work of the county horticultural commissioners which should have careful consideration and concerted action taken:

Therefore be it resolved, that we, county horticultural commissioners in convention assembled, express ourselves as favoring a meeting of all commissioners to be called by the director of agriculture at a time and place to be selected by him.

Also

"We pledge our loyal support to the new director of agriculture."

Also

There exists a very urgent need for pure seed legislation.

Therefore we favor the passage of measures by the coming legislature, and we will pledge our support to this matter to the Associated Chambers of Commerce. State Association of Farm Bureaus, and similar organizations of this state, for the purpose of furthering the agricultural interests of this state.

Next Year's Officers

The following officers were elected for the coming year: G R. Gorton San Diego, was elected president; A A. Brock, Ventura, vice president.

Agri GYPSUM

AGRI GYPSUM applied to your land unlocks the bound up elements that are not available as plant food, such as Potash, Phosphorus, Nitrogen and Calcium, essential to the successful growth of crops.

Cauliflower is greatly benefited by the application of AGRI GYPSUM

AGRI GYPSUM supplies the lime calcium in soil deficient in lime and supplies sulphur which is a fertilizer. It loosens the soil when it is inclined to pack and rounds out the culture and preparation of soil for successful farming.

Soil and crop experts everywhere agree that where soil is pregnant with useful crop producing elements AGRI GYPSUM should be applied and it should be ground fine to insure the most beneficial chemical action with other beneficial elements.

Alkali soil which may be redeemed to usefulness by using AGRI GYPSUM

AGRI GYPSUM applied on Alkali soil will neutralize the alkali, rendering it harmless to the growth of vegetation. If the reader is in doubt as to the virtues of AGRI GYPSUM, apply it on a strip across a field of Alfalfa, Beans, Corn, Barley, Potatoes, Cauliflower or Garden Truck—alkali soil—and watch the results.

Call for AGRI GYPSUM; it is made by the largest producers of gypsum in the world. Inquiries about what may reasonably be expected of gypsum as it would affect your soil are cordially solicited.

Helps From Uncle Sam

By Ernest Braunton

THE United States department of agriculture has a minature manufacturing plant in Los Angeles that is turning out samples of a great many by-products from our varied fruit industries. And yet the field studies are as extensive as the laboratory research and of even greater value. Few are aware of the existence of this plant, much less do they know of the great work going on there for the benefit of the California fruit growers and the allied industries.

The Citrus By-Products Laboratory was established in 1914, after a staff of field chemists had been sent from Washington to study the maturity of citrus and other fruits. There was such a strong demand for information regarding the utilization of cull oranges, lemons and grapefruit that a laboratory was established at 142 South Anderson Street, Los Angeles, under the direction of E. M. Chace, chemist in charge. There is an enormous amount of citrus culls each year from undersized or too large fruit, from that which is misshapen, unsightly, thorn punctured, injured in picking or in other ways. All this was waste aside from a small amount used in two primitive plants for the production of citric acid. Cull oranges could be obtained in large quantities for $5 a ton; now they bring $25, and the two small commercial concerns have grown to 20 that are producing orange by-products to the extent of 7,000,000 pounds a year. Four concerns on lemon by-products also have a capacity of over 50,000 pounds of lemon oil, 500,000 pounds of citrate of lime and over 1,500,000 pounds of citric acid.

One of the most patient of Mr. Chace's researches has been for drinks from cull fruits, especially from grapefruit, and experts who have tasted a blend he now has are loud in their praises. The writer was asked to sample some that had been bottled 18 months and its flavor had in no wise deteriorated. It is composed of 80 per cent grapefruit juice and 20 per cent loganberry juice. It is very pleasing, both to the eye and the palate and will no doubt soon be manufactured at some of the local plants. The juices are bottled without dilution, though a little sweetening is added Many other blends of good quality are being tried, one of them having a base of pineapple juice, another a blend of juices from pomegranate and grapefruit. Orange juice is more of a problem as it has a higher sugar content than grapefruit juice and does not lend itself so well to sterilization, and of course, by reason of the sugar, ferments more quickly. But their greatest problem is to devise an improved process of separating the oil from lemon peel. Mr. Chace having visited Sicily to investigate the processess and methods of expression used there.

Field Work

Thus far we have mentioned only laboratory experiment and research, but field work is carried on in every county in the south end of the state, and each year part of the staff visits Florida to tell about and demonstrate the good work accomplished in California. Mr. Chace is just leaving for Florida, and one of his assistants, H. D. Poore, preceded him by some weeks. During Mr. Chace's absence, C. G. Church, assistant chemist, is in charge of local investigations. For some years they have been studying the maturity of cantaloupes in the Imperial and Coachella Valleys to devise a means by which the grower can tell at just what stage he may harvest his crop with greatest safety and profit. The latest study taken up is the maturity of the avocado, and members of the avocado growers association have kindly set aside for the use of the government experts one tree of each variety. These are visited monthly and accurate notes made of their condition so that even slight changes are closely observed. It is believed accurate data may be secured which will enable the grower to judge the maturing of his fruit, so that while none may be marketed green, all may be allowed to remain on the trees until it has reached the most palatable state. Inquiries of all sorts pertaining to fruits and their uses are constantly coming in and, as means of utilization are determined, circulars will be issued to all applicants, containing approved recipes. The first two of these appeared in our household department last week.

California Crop Prospects

The crop reporting bureau of the bureau of crop estimates, United States department of agriculture, makes the following estimates of crop conditions in California.

The total production of apples will exceed the early estimates, it now appears. The commercial, or boxed crop will be around four million boxes, which will be slightly less than 60 per cent of the total crop.

Pears will exceed last year's crop by at least 10 per cent. Shipments are not so large as in 1918 and 1917, but the tonnage dried and canned will both be materially larger, making the total crop about 110,000 tons.

Production figures on almonds and walnuts will be fully up to the forecasts of previous months, and owing to older trees and new bearing acreage both will be record crops.

Both wine and table grapes are still being shipped to the limit of available cars, although the end of the season is in sight.

Raisins are now all in the sweat boxes. The indicated average yield was not quite a ton to the acre, and the acreage picked about five per cent greater than the usual. The total production will be very close to 180,000 tons of raisins.

Oranges are ripening in Northern and Central California, and before the end of the month picking in these districts will be general. Reports on conditions show the navel crop to be about on a par with last year but only 60 per cent of a normal. Valencias and miscellaneous varieties are only 70 per cent of a normal and 80 per cent of last year.

Lemons are only 77 per cent of a normal compared with 88 last year and a ten-year average of 86.

The yield of "beans other than limas" varies from two sacks to the acre in some sections to over 15 sacks in others, with an average of all varieties for the state [illegible] pounds, or about 13 bushels. Of the 290,000 acres planted, 95 per cent, or about 275,000 acres, were harvested, making the total production 2,262,000 centals.

The production of limas was estimated one month ago at 540,000 centals. This will give a total of all beans of 2,802,000 centals, equivalent to 4,672,000 bushels compared to 8,534,000 bushels last year and 8,091,000 bushels in 1917.

The condition of sugar beets on November 1 was 68, the same as one month ago. Harvest of beets is about over with very disappointing yields in some sections. Drouth, bugs and plant diseases all took a crack at the beet men this year, and the indicated average yield per acre is only 7.30 tons compared to an average of 9.55 tons for the past nine years.

As the harvesting of the corn crop is still in progress, it is difficult to determine accurately the yield per acre in California. Based on reports now at hand, it appears to be 33 bushels, as compared with 35 bushels last year The percentage of acreage cut for silos is greater than in 1918.

The yield per acre of Irish potatoes in California shows a falling off of six bushels—129 bushels as compared with 135 last year Our estimate of the states' total production is 11,760,000 bushels. Our reports show that 80 per cent of the acreage was grown for the market. About 60 per cent of the California commercial production is made up of late winter potatoes or that portion of the crop moving after September 1. This year the

shipments of potatoes harvested after September 1 promise to be about 5,260 cars as compared with 6,200 last year, 4,590 in 1917 and 4,590 in 1916. Most of the late potatoes in California are grown in the delta region, which will probably produce 95 per cent of the late storage crop of potatoes, or nearly 5,000 cars.

Sweet potatoes in California have not met early expectations. The shortage of water for irrigation at a critical period cut down the average per acre from 170 bushels last year to 133 bushels this year. They are running small in size, but the quality is good. It is found in harvesting the crop that the earlier estimate of acreage planted was too low; therefore the total production will be about 1,000,000 bushels.

The weather has been ideal for rice harvesting and threshing. Though there have been some phenomenal yields in a few fields, the average yield is falling a little below earlier predictions.

BUD SELECTION

At the last annual convention of the California Association of Nurserymen, the most interesting discussion was upon the subject of bud selection for deciduous trees. For several years this method has been followed by the leading propagators of citrus stock, but only of late has the grower of deciduous trees turned his attention to this most vital matter. California's fruit industries are growing now as never before, and as they develop competition becomes keener. Certain sections and certain growers in those sections become noted for their production, which commands the highest price. Even in these orchards some trees are better than others, in yield, size, flavor and shipping qualities, and no argument is needed to convince all that only from these best trees should buds be taken. But no standardization of this work has yet been undertaken, and it is the belief of several prominent members that the association should exercise some means of control so that the public could rest assured that purchases from its members would be from such selected stock, for there are always some dealers offering for sale stock of inferior quality, propagated from buds indiscriminatingly cut from the orchard.

AVOCADO GROWERS MEET

The recent semi annual meeting of the California Avacado Association at Hotel Belvedere, Santa Barbara, proved one of the best this association has held. Secretary Hardin writes:

"There were 130 present at the dinner on Friday evening. Wilson Popenoe's illustrated lecture was most interesting and instructive. A large number of beautifully colored slides were shown on the screen. In addition to the regular program on Saturday, Professor David Fairchild, of the United States department of agriculture, was present and gave a most interesting talk on the avocado industry. There was an excellent exhibition of fruit, some of it weighing as much as three pounds. Avocados were served at the dinner in cocktail, salad and ice cream."

One of the most interesting features of the program was the addresses on June Drop by Messrs. Elliott, Taft, Thacher, Popenoe, Barron and Stewart. Other addresses were made by Drs. Hitchcock and Manning and Messrs. Jamieson, Spinks, Shamel and Adams.

DATE GROWERS INSTALL VACUUM FUMIGATORS

Date growers of the Coachella Valley have installed machinery for fumigation of dates to control pests. Carbon bi-sulphide is the agent and the work is done under vacuum, permitting the fumes to penetrate every particle of the fruit. All eggs, larvae, pupae and adults of the stored date pests are killed by one to two hours' fumigation, utilizing a 26 inch vacuum. Two fumigators, each with a daily capacity of over two tons of dates, are already installed and operating successfully. The California Date Association and A. W. Risher are the growers who will thus protect their pack. Not only are these two machines the first ever used for fumigating dates under this method, but this is perhaps the first commercial use of carbon bisulphide under vacuum in the United States.

Killefer Efficiency

Combination Subsoiler and Fertilizer Furrow Plow

KILLEFER QUALITY

Put Manure Into the Ground Where It Will Do the Most Good

Our Subsoiler is easily made into a Furrow Plow by changing standards.

The Furrow Plow is handled from the seat of the tractor and is strong enough to go into any ground and make a good furrow.

Subsoil your orchard first. Break your soil so the water can get down into it, then attach the plow standard to the Subsoiler frame and open up a furrow. Then put the manure into the ground.

This is the method employed by some of the most successful growers.

Write for catalogue and price, also our booklet on Deep Tillage.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Blackeye Beans for Stock

I have about 200 sacks of Blackeye beans which cannot be sold as a human food because they are discolored by the rain. In buying rolled barley for my horses I have to pay $3 for 80 pounds and they say pretty soon barley is going up. In regard to the food value, compared with barley, I think Blackeye beans should be worth considerably more than the former, but I received as the highest offer only $2.50 per 100 pounds. As I don't like to give my beans away, I beg your advice as to how I can make a better or more profitable use of them. Could I feed some of the beans to my horses in place of rolled barley? If so, how much at a time and in what state? Would it pay to buy some little pigs and feed the beans to them? Of course, I know beans alone would not be the right ration. Or how about using them as fertilizer for my orange trees? Would that be better and more profitable? Of course in choosing the first way the pig manure must be good for trees also.—Subscriber, Fullerton.

These questions were referred to Prof. F. W. Woll of the state university, and he writes:

No direct experiments as to the relative value of Blackeye beans or other cowpeas and barley as hog feeds have been conducted so far as I am aware, but cowpeas have been found to have approximately the same feeding value as Indian corn in experiments conducted at southern stations. This would place them a little ahead of barley as a feed for fattening hogs, since barley is 90 to 95 per cent as efficient a feed for this purpose as is Indian corn. The best results are obtained by feeding Blackeye beans cooked, with an addition of a little salt, feeding them mixed with ground or soaked barley in the proportion of one part of beans to two of barley, by dry weight. If the beans make up a larger proportion of the grain feed than this, the pork will be of poor quality and a low dressing percentage will be obtained. Pigs will not eat beans or cowpeas satisfactorily if soaked or ground, so far as our experience goes, so that the expense of cooking should be considered in placing a money value on them. It would seem that at ruling quotations for barley they can hardly be worth more as a bog feed than the price given. If they could be used as a part of the grain mixture for dairy cows, in which case they might be fed ground, one would be warranted in paying a similar price for them as for barley.

Brazing With Acetylene Gas

Will you please tell me if it is possible to braze with acetylene gas from a presto tank?—Subscriber, Bakersfield.

The gas from an ordinary prestolite tank will not make heat sufficient to braze metals though it can be used in soldering light work.—J. B. N.

Pump Trouble

We had a well drilled on our chicken ranch, 82 feet deep. We have 21 feet of water, have a standard make pump, eight inch bore. Pipe is two inch, cylinder 3 inch and is 20 feet from the bottom. We have an Olds gas engine, 1½ horse power, but it doesn't seem to have the power to lift the water. It pumps so hard it can not be pumped by hand. A man can hardly lift a pail of water. Can anyone tell me the reason or what is the matter? Any information will be thankfully received.—Subscriber, Vacaville.

The description is not clear, but the result as stated would indicate a scarcity of water. The cylinder is rather large for hand work at that lift, but if the water has free access to the cylinder the engine should handle it readily provided there is plenty of water. We are inferring that the pump has an eight inch stroke and if so would change to a two and one-half inch diameter cylinder placed within five feet of the bottom of the well and without any pipe on the bottom of the cylinder. The pump should not be run more than 40 double strokes per minute. The two inch pipe should be used with the smaller cylinder. —J. B. N.

Water Measurement

Is there a meter that will measure water as it flows over a weir and where can it be got? Are irrigation measures the same in the southern and northern part of the state, and what is the right measurement for a miner's inch? How deep would water have to be in a box one foot wide, running over a weir, to make four miner's inches?—Subscriber, Escondido.

There are meters made for use in open flow water channels but more correct measurements can be made in irrigation ditches by a properly constructed weir. The agricultural experiment station at Berkeley in Bulletin 247 gives drawings and measurements for construction of such weirs and can be had on application to the station. Common usage in many parts of the state allows a miner's inch of water which is a constant flow of nine gallons per minute, but if such amount is not specified the legal flow of 11½ gallons per minute is applied. While the meaning of the inch varies in different localities, it is not a stream of water an inch wide and an inch deep regardless of pressure. This cannot be answered without knowing the form of weir used.—J. B. N.

Veterinary

Answers in this column by Dr. Wm Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.
Unsigned communications receive no attention.

Lumps in Udder

One of my milk cows has hard lumps form in the udder; usually at the base of the teats. They are sore to the touch and at times break out. Does this condition render the milk unsafe for use and is there anything that can be done for her?—Subscriber, Campo.

The lumps may be caused by tuberculosis. Better have her tested. The milk should not be used for children. Older people are not so apt to contract the disease. Write State Veterinarian, Sacramento, to have her tested. He will tell you what to do after testing her.

ELECTRICAL GOODS FOR BRAZIL

According to consular reports Brazil is a promising field for American electrical goods of all kinds. In Argentina and Uruguay the lack of water power limits the use of electricity to some extent, but in Brazil the immense amount of water power available makes the electrical field one of unusual attraction. Before the war American materials were not an important factor, but now the power plants in all the large cities use American materials almost exclusively.

TRAPPERS

You Will Dance

with joy when you get your returns for furs shipped to the Abraham Fur Co., the house that never disappoints fur shippers. Our expert graders in our "Take-up" Department have positive instructions to see that every shipper gets a liberal grade on every skin and are held accountable for all furs taken up by them. Our prices are the highest ever known and now, more than ever, you need the services of an old established, reliable and experienced fur house. There are no fur houses in the world which have these qualifications to a greater extent than the Abraham Fur Co.

Ship Every Pelt You Have—Now

We urge you to send us your next shipment of furs and let us prove to you that our prices are the highest—our grading the most correct and liberal and our returns most prompt. We have been in the fur business continuously for 43 years and we have made more stanuch friends and have a larger percentage of regular old shippers than any other fur house in the U.S. These facts justify our claims that Abraham is America's Leading Fur House. Other fur houses make these same claims, but it is generally conceded by our competitors that the hardest fur house to fight against for business is the Abraham Fur Co. Why? Because our returns are always top of the market and any fur house that wants to keep pace with us will have to go some and be on the job early and late.

SUPPLIES Get one of Abraham's wonderful Smoke Pumps — $2.00 postpaid, with extra extension $2.10. Abraham's Animal Baits and Trail Scent $1.00 per bottle, 3 bottles for $2.50. Best bargain in Rain Coats $5.95. Get our free book "Fur Facts" and Trappers' Supply Catalog. It's free—drop us a card today. Weekly Reports—Tags and other literature—also free. COOPERATION AT CONVENTION

Continued from Page 681.

Oroville machines were at the service of convention attendants, and a visit was made to the larger orange orchards of the county at Thermalito; thence back through the town to Wyandotte and over the great stretch of land of approximately 20,000 acres for which recent bond election will provide water. Scattered here and there over the tract are developed properties which give promise of great future development. The great olive curing plants of the Mt. Ida Association and the Ehmann people were visited. In one of these plants an acre and a quarter of ground covered with concrete vats, termed by Mr. Pierce the "municipal baths," contained hundreds of tons of olives in the curing.

B. B. Meek, one of the largest of Oroville's olive growers, presided at the afternoon session in the Exposition Auditorium.

Manager Powell of the California Fruit Growers Exchange told of the $225,000,000 industry and some of the methods which have been necessary to build it up and make it of such enormous value to the state of California. The industry employs today 27,000 laborers, and with them are others, making 150,000 people dependent upon that industry for their living.

The past season's return to the industry has been $75,000,000. Of this $55,000,000 has gone to members of the Exchange, in which there are 200 associations and 20 sub-exchanges.

E. W. Ehmann, at the head of the great packing plant which is responsible for the introduction of manufacture of the California ripe olive in a large commercial way, referred to the fact that California must use every effort to dispose of the great crop which will come from her 50,000 acres of olives. We think of this as a great production, but when we also learn that Spain has a planting of over 4,000,000 and increases this by an amount greater than California's total acreage every year, it is seen that California is not alone in olive production.

C. C. Teague gave of his experience in handling citrus orchards and described the heavy requirements of the grower of citrus fruits. These demands must be met if success is to be wrought from that industry. Butte County citrus growers have not yet had to face these problems, as have those of the South. "Only through the cooperative movement can the great fruit industry be perpetuated. Were it not for it I would sell my orchards today."

F. J. Mason spoke of Butte County citrus conditions and output. "We believe in real cooperation in its true sense, and we believe in good teamwork between the grower, the shipper and the consumer."

In merest outline, Prof. Bioletti said:

By Frederic T. Bioletti

The large crops of fine fruit produced by some olive orchards in California demonstrate the suitability of the climate and soil of some locations for this fruit. Some failures indicate that other locations are less suited.

Olive growing tends to concentrate in the lower foothill regions of the Sierras and in similar situations in Southern California, though scattered profitable orchards are found in other localities. The least favorable localities are in the extreme north, in the coast belt subject to summer fogs and at elevations above 1500 feet.

With suitable climate, sufficient water and skillful handling, almost any good soil will yield profitable crops.

The main factors under the control of the grower are choice of variety, application of water, pruning and fertilization.

The Mission is still the safest variety for most locations; the Manzanillo, Ascolano and Sevillano coming next in about this order for special localities.

Irrigation is necessary for the best results in practically every locality. Two irrigations, one in spring and another a few weeks before the fruit commences to ripen, are almost always needed. In the hotter localities and in shallow or leachy soil, one, two, or more supplementary irrigations are necessary.

Young trees should be pruned no more than is absolutely necessary to give them the required shape. The common method of severe pruning delays the growth and bearing of the tree several years.

Old trees should be pruned every year to preserve their form, to promote an annual growth of fruiting wood, and to allow the sun to penetrate to every part of the tree. This should be done almost entirely by "thinning out" and not by "cutting back." Where trees are too close they do not bear well. Thinning out of the trees is therefore often advisable. It has in some cases been found possible to double the crop by removing half the trees.

Fertilization is useful in some cases. but is of little use unless accompanied by proper irrigation and pruning. So far nitrogenous manures have given the best results. These are farmyard manure, including sheep and chicken manure, tankage, and nitrate of soda. Green manuring by winter and summer cover crops plowed in should be practiced whenever possible.

The following general rules for the improvement of olive orchards may be given:

Promote vigorous growths by good cultivation, sufficient irrigation, and where needed by green manuring and nitrogenous fertilizers.

Prune bearing trees regularly every year to promote a moderate growth of new fruiting wood, to open up all parts of the trees to the sun and to preserve its form.

Prune young trees as little as possible while developing the desired form.

A Banquet

That evening was long to be remembered. Oroville ladies cooked Oroville products. We all ate and can certify that Oroville ladies are good cooks. Oroville musicians entertained.

W. W. Jengles presided. Director Hecke and Marshall De Motte of the state board of control made the principal addresses. Other short talks were made by Col. Harris Weinstock, Dr. E. D. Copeland, Assemblywoman Elizabeth Hughes, James Mills, Freda Ehmann, Geo. Pierce, A. R. Sprague and C. B. Messenger.

Friday Morning

With so many conventions in session at once one is unable to attend all, and Friday was my day with the Nurserymen's Association. But in addition to Prof. Whitten we believe the addresses as scheduled by Prof. Vichmeyer on irrigation investigations and by E. M. Sheehan on evaporators for fruit drying were both made. Certain I am that addresses by Prof. De Ong and Prof. Cruess were made and will afford the basis for excellent articles in later Cultivators, especially that of Prof. Cruess, which will be given with illustrations.

Effects of irrigation, pruning and spraying as factors in frost control, by Dr. J. C. Whitten—more in a later Cultivator. While Dr. Whitten was not present his paper was read by Prof. Vichmeyer.

In the afternoon Avery S. Hoyt made a strong appeal for fullest support of fruit growers in the work of standardization. California products are being given a place in the markets of the world that they never would have had were it not for the work of Mr. Hoyt and his assistants.

Charles H. Gray spoke for the California Cooperative Canneries and of the value of this great institution in stabilizing the market for canning fruit.

A Duck a Piece

The banquet on Friday evening was full of pep and punch and plenty to eat. In fact a duck for every attendant was supplied, and they were some ducks. It is safe to predict they will never molest rice fields again. C. M. Osenbaugh, president of the state normal school, was toastmaster. Addresses were made by Director Hecke, Col. John S. Chambers, Vice President Bentley of the California Packing Corporation, and Prof. W. S. Weeks. And Professor Weeks is a vaudeville artist, — especially in the handling of Scotch dialect.

Saturday

Saturday, like every day of the convention, gave to us perfect weather.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Close Road

A owns a ranch. B and C are adjoining ranch owners who have been coming through A's ranch for a number of years. A has kept gates at the entrances. Often times these gates are left open and A's stock gets away. Can B and C claim a right of way or can A close them out? The lands of B and C both border on the county road.—Subscriber, Mountain View.

The courts have held in cases exactly similar to this that the use of a right of way is not sufficient to establish a prescriptive right over the lands of another. The use must be accompanied by a claim of right communicated to the owner of the land or it must be shown that the use was so continuous and so openly and notoriously adverse to the owner as to create a presumptive knowledge in the owner that the person using the land was doing so under a claim of right. It has been held that the posting of notices on such a private road to the effect that the same is private property, strongly tended to negative any presumption of adverse user or communicated claim of right. The maintenance of gates which are closed by the owner of the private road would also very clearly tend to negative any such claim of right. It would therefore seem unquestionable that A can close his gates and refuse to permit his neighbors to use his way.

Legal Proceedings With Stray Stock

Some time ago I took up a stray heifer in my pasture. How shall I proceed to recover cost of keep?—Subscriber, San Jacinto.

Confine in a secure place and within five days file with county recorder or pound keeper a notice containing description of animal with marks and brands, probable value and a statement of the places where taken up and confined. Fee for filing 50 cents. If the value of animal exceeds $10 the notice must also be published in a newspaper in the county at least once a week for three successive weeks, stating time when animal will be delivered to the constable, or if the finder knows the owner, then within five days after the animal is taken up he shall notify the owner or person in charge of it, this notice to contain the same information as the notice above, and for this notice a charge of 50 cents may be made.

At any time within 30 days from filing the notice, any person claiming the animal may demand possession and pay taker-up all damages, expenses and costs as follows: Fee for filing the notice, costs of publishing notice and attorney's fee for preparing the notice, when recorded only, not to exceed $2.50, 50 cents a day for the keeping and care of each horse, mule, jennie, ass, cow, bull, ox, steer or calf, not to exceed 15 cents a day for keeping of sheep, goat, hog or other animal. The taker-up is obliged to properly feed and water the animal while in his care and if he fails to do so forfeits all right of lien.

If no one claims animal within the 30 days or if the claimant fails to pay expenses and commence action within said 30 days for recovery of animal, then the taker-up shall in writing notify a constable of township in which the animal is held, which notice shall specify that he has complied with all of the foregoing provisions, that the claimant of the animal has failed to appear, or if he has appeared he has failed to pay the expenses and costs, and he has failed to commence or prosecute with diligence an action for the recovery of the possession of the animal within the time provided, and that the animal is held by the taker-up subject to sale. The constable shall immediately proceed to sell the animal at public sale in conformity with the law and shall be entitled to the same fees as in sales on execution.

Out of the money realized from the sale, the constable shall first retain his fees, then pay to the taker-up his expenses and costs, and any surplus he shall pay the county treasurer to be held for the owner of the estray. If anyone within a year thereafter proves to the satisfaction of the board of supervisors that he is entitled to this sum the board shall order it paid over, and if not so proven within one year then the money shall become a part of the common school fund of the county. All sales made by the constable shall convey good and valid title to the purchaser and the owner is thereafter barred from all right to recover the animal.

Pumping Plants and Irrigation Rights

Is there any law requiring registration or the making of a report to any official by an irrigator who has his pumping plant on his own place and simply supplies his own needs? What is the law regarding supplying one's neighbors, that is to say, is there danger of their acquiring right which might prove embarrassing to the one owning the pumping plant? What regulation governs such situation?—Subscriber, Los Angeles.

If the irrigator were pumping water from a stream he would of course be required to make an appropriation and obtain permit from the state water commission. The state water commission is contending that the term "stream" applies not only to those streams which appear upon the surface, but also under ground. That matter has not been determined, however. Clearly an irrigator who merely pumps water lying under his ground, technically known as percolating or local water, would be required to make no report. It may be somewhat different in respect to supplying neighbors. It would seem that a supply from a pumping plant would be so clearly one of license and permissive use that no possible right could be acquired by adverse user such as might be in the case of a spring or stream arising upon or flowing through one's land, and in case such water was supplied without charge it would seem that there would be no difficulty arising. However, if a charge is made, the owner of the pumping plant would probably come under the definition of a public utility. The latest amendment to the public utility act provides as follows:

"When any person performs any service or delivers any commodity to any person or persons, etc., which in turn either directly or indirectly perform such service or deliver such commodity to or for the public or some portion thereof, such person, etc., is hereby declared to be a public utility and to be subject to the jurisdiction control and regulation of the railroad commission and to the provisions of this act."

"The term public or any portion thereof, means the public generally or any limited portion of the public including a person, private corporation, etc." In the event that such person sold water to his neighbors and came within the provisions of the

public utility act it would be necessary for him to file with the state railroad commission his schedule of rates and make the reports as required in the public utility act, and he would be subject to the rulings of the commission in respect to the reasonableness of his charges.

Avoiding Probate

How can real estate be arranged so that in case of death of husband it will not be necessary to probate the real estate which has been acquired since marriage?—Subscriber, Hemet.

If the parties are residing upon the property the best method is to record a joint homestead declaration; another method is to deed the property to some third person, and for that third person to deed it back to the husband and wife as joint tenants with the right of survivorship; a third method is for the husband to execute a deed to the wife for all of the property. The last two methods are not recommended as they have caused considerable litigation.

Administration of Estate

At the time of death a man owned three city lots, valued at $75 each, and no other property. Can his widow hold these lots and give clear title? If not, what must she do in order to sell them, and what will the expense be?—Subscriber, National City.

The code provision in respect to such estates provides that if the deceased leave a widow or minor child or children a petition may be filed in the superior court, verified by the administrator, widow or guardian of the children, showing that the net value of the estate over liens or encumbrances of record thereon at the date of the death of the deceased does not exceed $1,500, which allegation is enforced upon the return of the inventory of the estate showing the estate to be less than that sum, and an order shall issue fixing a certain day in the court whereupon any person interested may appear and show cause why the whole estate should not be assigned for the use and support of the family of the deceased. A notice of this order must be posted for ten days in three public places. If the allegations of the petition are found to be correct, then the whole of the estate shall be assigned to the widow of the deceased, or if there be no widow, then to the minor children, subject to encumbrances, after the payment of the expenses of the last illness, funeral charges and expenses of administration. The party to whom the estate is so assigned is then vested with absolute title to the estate and no further proceedings need be had. It is within the discretion of the court to appoint but one appraiser, whose fee would be not more than $5. It costs $6 for the filing of the petition, and the whole matter should not cost in excess of $50, including the services of the attorney. The widow could not give the title without taking probate upon the estate for the reason that there must be some means of judicially ascertaining of record that there are no other heirs, that there is no will, and that the creditors are entitled to no interaest in the estate. In fact there is nothing to show of record that the widow is the widow of the deceased, so that in order to complete the chain of title upon the death of the owner of the property it is necessary to take probate proceedings in the forms provided.

"Do you consider your nerve is sufficiently steady to fit you for an aviator?"

"Well, I've been out in a boat with a nervous fat girl."

Guarantee—*We guarantee Hanes Underwear absolutely —every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.*

The Best Bred Holsteins That MORRIS Ever Sold

Owing to a disastrous fire which destroyed their big cow barn, their entire supply of hay, mill feed, and four silos, A. W. MORRIS & SONS CORPORATION, Woodland, Calif., find it neccssary to make a reduction in the size of their herd, and have instructed us to sell

70 Royally Bred Young Cows and Bulls

State Fair Grounds, Sacramento, Cal.

Thursday, December 18, 1919

Small lots of top animals have left the Morris herd before this that would rank with these cattle in breeding, but a study of the sale list is positively convincing proof that never before has so large a number of top animals gone out of the herd in one lot.

MORE THAN 50 per cent of the individuals are daughters of Prince Gelsche Walker or granddaughters of the two former world's record cows Aralia De Kol and Riverside Sadie De Kol Burke.

PRACTICALLY 75 per cent of the females are three and four year olds, bred in the families that dominate the herd, and they would stay in the herd and be more fully developed were it not for the extreme necessity of making this sale.

EVERY FEMALE IN THE SALE is of milking age, and they are all bred to one of three bulls: SIR AAGGIE DE KOL MEAD, son of Miss Valley Mead De Kol Walker; KING AAGGIE MEAD, son of Aaggie Acme of Riverside; and KING MORCO ALCARTRA, son of Tilly Alcartra.

Think of This

The females in this sale are mostly A. R. O. cows with records up to over 30 lbs. butter in 7 days and from 750 pound 2 year old to 1093 pound yearly butter records, including a number of daughters of 1000 pound cows! And bred to the three bulls named above!

THERE HAS POSITIVELY NEVER BEEN OFFERED SUCH AN OPPORTUNITY IN THE WEST TO BUY YEARLY RECORD BREEDING EQUAL TO THIS IN ONE SALE.

Dairy Cattle at San Francisco

By R. P. Royce

NOTWITHSTANDING the fact that the show of dairy cattle was of extremely high order, in some classes touching the high point of quality, the show as a whole was not up to the full possibilities of California. This was rather an off year for many of the leading herds that made the earlier shows and it will perhaps be necessary to arrange the dates of the three larger shows so as to follow each other more closely if complete and even more representative exhibits are to be gotten out.

Perhaps the outstanding feature of the show was the quality found in all classes and the narrow margin noted between the top and bottom places. The judges for each of the four principal breeds were men of recognized ability and their placings were followed with marked interest by the large crowd about the ringside. Each year and each succeeding show but strengthens the often expressed opinion that California is producing some of the best cattle to be found in America.

The Holsteins

Nine California herds and one from Arizona staged a particularly strong and pleasing exhibit of Black and Whites. For the most part none of the different herds had met before and many of the classes furnished competition that was looked forward to with keen interest. E. W. Major, who made the ratings, took plenty of time and tied the ribbons in a most painstaking and careful manner.

A feature of the Holstein division was the fine record made by the blood of Tilly Alcartra. that was in strong evidence in the Morris exhibit.

The five aged bulls lined up with King Morco Alcartra, a son of Tilly Alcartra, in first and the judge liked him well enough to make him senior and grand champion. Vogel was second with Segis Alcartra De Kol Burke over the Toyon entry, Sir Pietertje Ormsby Mercedes. Sanders was fourth and the Napa State Hospital fifth.

The four two year olds did not make an exceptionally strong class and each fell into his place without much disagreement. Holmes' Segis Alcartra Springbrook led the three senior yearlings, Sanders was second and Toyon third. No junior yearlings appeared.

The senior bull calves furnished a strong class and it required a hairline decision to determine the rating of the two top calves. A stronger chest carried the Morris entry, King Mead of Riverside 16th, above the Dolcini calf, Sir Aaggie Korndyke Mead, with perhaps more quality and a better skin.

The junior bull calves presented one of the strong classes of the show that was topped out by the junior champion, King Morco Alcartra Mead, a son of the grand champion. Another Morris entry was second, with a university calf slipping into fourth place between two Toyon youngsters.

The outstanding class of the show and the one that was declared to be stronger than the same class at the recent National Dairy Show, was the line-up of 16 aged cows. Few shows have uncovered a stronger showing of type and production and the fact that only five names appear in the list is due to the limit of awards. Sixteen ribbons might have been given. The honor of leading such a notable class very popularly was awarded to Betsy Lamb Prilly, from the Vogel herd. In every way Betsy Lamb Prilly is one of the most acceptable types seen in a California show ring. She is a cow of ample size, disclosing dairy temperament throughout, with excellent capacity and constitutional strength to carry her through. She swings a large, capacious, well balanced udder of fine texture. Hazelwood Helio Queen, from the Napa herd, a cow of extreme size, lacking the general balance of the winner, more particularly as regards constitution, but of pleasing lines and dairy conformation, was second. Toyon Farms took the next threo places, the third and fourth rating going to cows that have recently completed records of 1,100 pounds. One of the most popular entries for high honors was the good cow, Pleasant View Johanna Aaggie, shown by Phillips. Only one three year old was in the ring.

Just before entering the show ring, Miss Aaggie Grace Alcartra, a Morris two year old, calved, and notwithstanding that she was a trifle shaky from her natural labors she was good enough to be sent forward by the judge with the remark that she was very promising. Betty Beets Banostine, a beautiful heifer owned by Phillips, was second. Toyon had the third, fourth and fifth places.

The junior and reserve grand champion, Josephine Johanna Oak De Kol, owned by Phillips, headed the senior yearlings. She is a heifer of very pleasing lines and quality. She has a beautiful head, good withers, ample depth, a strong top and splendid udder development. Toyon Colantha Fayne Valdessa in second for Toyon was a good type but lacked the finish of the one above her. Holmes showed a good heifer in milk in third. Vogel was fourth and Dolcini fifth. Only two junior yearlings were in the ring, Toyon taking first over Sanders.

The senior heifer calves made up a strong class. Napa Hospital landed first and third, Toyon second and fifth and Holmes fourth. A daughter of Tilly Alcartra won over a good class of juniors.

Exhibitors: A. W. Morris & Sons, Corporation, Woodland; Toyon Farm Association, Los Altos; H. E. Vogel, Fresno; J. P. Phillips, Fresno; V. F. Dolcini, Davis; Napa State Hospital, Napa; R. L. Holmes, Modesto; University of California, Davis; Jared W. Scudder, Holt; Frank Reed Sanders, Phoenix, Arizona.

The awards follow:

Aged bull—1, Morris on King Morco Alcartra; 2, Vogel on Segis Alcartra De Kol Burke; 3, Toyon on Sir Pietertjo Ormsby Mercedes 43rd; 4, Sanders on King Pearl Segis Pontiac; 5, Napa State Hospital on Prince Rag Apple Imperial. Two year old—1. Scudder on Model Domino Glista; 2, Sanders on Prince Hengerveld Paltz DeKol; 3, Holmes on Prince Abbekerk Aralia Walker; 4, Morris & Sons on King Aaggie Mead. Senior yearling—1, Holmes on Segis Alcartra Springbrook; 2, Sanders on Palo Verde King Pearl Pontiac; 3, Toyon on Toyon King Jondine Fayne Valdessa. Senior calf—1 and 3, Morris on King Mead of Riverside 16th and King Meade of Riverside 17th; 2, Dolcini on Sir Aaggie Korndyke Mead; 4, Holmes on Karlray Pontiac Ormsby; 5, Toyon on Sir Aaggie Mead. Junior calf—1 and 2, Morris on King Morco Alcartra Mead and King Korndyke Pontiac Acme; 3 and 5, Toyon on Toyon Butter Boy Valdessa and Toyon Circucla Valdessa; 4, U. of C. on Korndyke Senorita Boy.

Aged Cow—1, Vogel on Besty Lamb Prilly; 2, Napa Hospital on Hazelwood Helio Queen; 3, 4 and 5, Toyon on Ava Model Hengerveld 2d, Ormsby Segis Marie and Queen Van Beers 4th. Three year olds—Toyon on North Star Fayne Champion. Two year olds—1, Morris on Miss Aaggie Grace Alcartra; 2, Phillips on Betty Beets Bostine; 3, 4 and 5, Toyon on Moxie Johanna Korndyke Flebe, Korndyke Model Hartog 3d and Cascade Daisy. Senior yearling—1, Phillips on Josephine Johanna Oak DeKol; 2, Toyon on Toyon Colantha Fayne Valdessa; 3, Holmes; 4, Vogel on Annabelle Westlawn; 5, Dolcini on Netherland Snowball. Junior yearling—1, Toyon on Johanna Skylark Ormsby; 2, Sanders on Palo Verdo Hilda Segis Pontiac. Senior heifer calf—1 and 3, Napa Hospital on Napastahos Lady Lilith and Napastahos Asa Queen; 2 and 5, Toyon on Moxie Pearl Johanna and Isabella Ormsby Valdessa; 4, Holmes on Holmes Silverton Pontiac. Junior heifer calf—1 and 3, Morris on Tilly Alcartra 3d and Segis Margaret Mead; 2, and 4, Napa Hospital; 5, Toyon on Toyon Nora Hengerveld. Cow having official yearly record begun at five years or over—1, Toyon on Ava Model Hengerveld 2d; 2, Phillips on Pleasant View Johanna Aaggie. Cow having official yearly record begun under the age of five years—1, Toyon on Ormsby Segis Marie; 2, Morris on Zaza Tuebe Prophetess.

Senior champion bull—King Morco Alcartra. Junior champion bull—King Morco Alcartra Mead. Senior champion cow—Betsy Lamb Prilly. Junior champion heifer—Josephine Johanna Oak DeKol. Grand champion bull—King Morco Alcartra. Reserve—King Morco Alcartra Mead. Grand champion female—Betsy Lamb Prilly. Reserve—Josephine Johanna Oak DeKol.

Aged her—1, Vogel; 2, Toyon. Young herd—1, Toyon; 2, Sanders. Get of sire—1, Sanders; 2, Morris; 3, Toyon. Produce of dam—1, Morris; 2, Phillips; 3, Toyon. Dairy herd, to consist of five cows in milk all to be owned by exhibitor—1, Toyon.

The Jerseys

The Jersey exhibit afforded satisfaction to the breed's friends, but the Jersey breeders of California are capa-

ble of bringing out a much stronger showing in point of numbers. Several of the leading herds did not make entries.

Professor J. B. Fitch of the Kansas state agricultural college judged the Jerseys and stated that he was greatly impressed with the fact that every exhibitor was making his living from his herd, thus demonstrating the real and sound value of the breed.

J. E. Thorp, Lockeford, and Guy H. Miller, Modesto, two veterans of the show ring, were the heaviest exhibitors and winners. Thorp's aged bull, Jolly Senator Raleigh, with an undefeated record this year again won his class and went through to the championship. Miller was second with Altama Interest. Miller showed the one two year old. Making his initial showing, E. F. Smith of Hayward won the senior yearling class with Goldie's Nehalem Gold, afterwards made reserve junior champion. Thorp was second and Jersey Queen Farm third. Miller's Wanda's Altama Interest, first in the senior bull class, was junior and reserve grand champion. Thorp had the only junior bull calf.

Thorp's grand old cow, Salome of Mossdale, carries her ten years lightly and stepped out in front of a strong class of aged matrons, and kept going through to the championship. Sanders was second, Thorp third and Miller fourth and fifth. The champion is a fine combination of type and producing ability. Fronted with an expressive head, thin neck, sharp withers, a top line that is quite good for her age, she also boasts of excellent quality.

Miller won the next class over Thorp. Sanders took first, third and fourth in two year olds. The university slipped in second and Miller was fifth. The winner, Desert Honeysuckle, was reserve senior champion. Thorp and Miller divided honors on their senior yearlings. Sanders won the junior yearling tie. The senior heifers acknowledged first place to the lovely Jewel of Tintagel, shown by Fortini, that was later made junior and reserve grand champion. Sanders won the baby class.

Exhibitors: J. E. Thorp, Lockeford; Guy H. Miller, Modesto; M. Fortini, Orland; E. F. Smith, Haywards; University of California, Davis; Jersey Queen Farm, San Jose; Frank Reed Sanders, Phoenix, Arizona.

The awards follow:

Aged bulls—1, Thorp on Jolly Senator Raleigh; 2, Miller on Altama Interest. Two year olds—1, Miller on Jap's Perfection Owl. Senior yearling—1, Smith on Goldies Nehalem Gold; 2, Thorp on Golden Legacy's Champion; 3, Jersey Queen on Rioter's Prince of St. Lambert. Senior bull calf—1, Miller on Altama Interest; 2, Thorp on Biddy's King of Mossdale. Junior bull calf—1, Thorp on Jolly Ben of Mossdale.

Aged cows—1 and 3, Thorp on Salome of Mossdale and Eminent's Wardress; 2, Sanders on Honeysuckles Maid; 4 and 5, Miller on Goldie of Venadera and Wanda of Venadera. Three year olds—1, Miller on Angela of Venadera; 2, Thorp on Nomie of Mossdale. Two year olds—1, 3 and 4, Sanders on Desert Honeysuckle, Jolly Francesca and Cheewanbeeks Beatrice; 2, U. of C. on California's Owl Rose; 5, Miller on Vega of Venadera. Senior yearling—1 and 3, Thorp on Fair Salome of Mossdale and Bonnie of Mossdale; 2, Sanders on Maid's Grey Beauty. Junior yearling—1 and 5, Sanders on Jolly Valley Rose and Dorothy of the Rancho; 2, Thorp on Marcelia of Mossdale 2d; 3 and 4, Miller on Daphne of Venadera and Arla of Venadera. Senior heifer calf—1, Fortini on Jewel of Tintagel; 2, Miller on Dagmar of Venadera; 3, Thorp on Gladys of Mossdale; 4 and 5, U. of C. on Owl's Mermaiden Fera and Owl's California Nora. Junior heifer calf—1 and 5, Sanders on Oxford Nora's Pretty Daisy and Golden King Lady Violet; 3, Thorp on Queen Bess of Mossdale; 3 and 4, Miller on Fay of Venadera and Diana of Venadera. Cow having official yearly record begun at five years or over—1 and 2, Miller on Goldie of Venadera and Wanda of Venadera; 3, Thorp on one entry. Cow having official yearly record begun under the age of five years—1, Thorp on one entry; 2 and 3, Miller on Angela of Venadera and Lucille of Venadera.

Senior champion bull—Jolly Senator Raleigh. Reserve—Altama Interest. Junior champion—Wanda's Altama Interest. Reserve—Goldies Nehalem Gold. Senior champion cow—Salome of Mossdale. Reserve—Desert Honeysuckle. Junior champion—Jewel of Tintagel. Grand champion bull—Jolly Senator Raleigh. Reserve—Wanda's Altama Interest. Grand champion cow—Salome of Mossdale. Reserve—Jewel of Tintagel.

Aged herd—1, Miller. Young herd—1, Thorp; 2, Miller. Calf herd—1, Miller; 2, Thorp. Get of sire—1, Sanders; 2, Thorp; 3,U. of C.; 4, Miller. Produce of dam—1, Thorp; 2 and 3, Sanders. Dairy herd to consist of five cows in milk all to be owned by exhibitor—1, Thorp; 2, Miller.

California Central Creameries Special

For the best grade cow, sired by registered bull, any age, with a testing association year's record for milk and butter fat production, completed since November 1, 1918—J. W. Coppini.

The Guernseys

Two herds of Guernseys represented the breed at San Francisco. A. B. Humphrey of Escalon made pretty much of a clean sweep over the L. Dee Smith cattle, Humphrey taking every championship and allowing only three firsts to his competitor. J. B. Fitch made the awards, which follow:

Aged bull—1, Humphrey on Bullion of Edgemoor; 2, Smith, on Mysie's Duke of Claremont. Two year olds—1, Humphrey on Escalon Challenger; 2, Smith on Polo Boy. Senior yearling—1, Humphrey on Nobleman of Maple Hill; 2, Smith on Mysie's Laddie Claremont. Senior bull calf—1, Humphrey on Escalon Dandy; 2, Smith on Prince Mysie of Claremont. Junior bull calf—1, Humphrey on Escalon True Type; 2, Smith on Glen's Fawn of Claremont.

Aged cows—1, Smith on Mysie May of Claremont; 2, Humphrey on Fairy of Alfalfa Farms. Three year old—1, Smith on Mysie Star of Claremont. Two year olds—1, Humphrey on Escalon Fairy; 2, Smith on Mysie's Moon of Claremont. Senior yearling—1, Humphrey on Escalon Evangeline; 2, Smith on Mysie's May of Claremont 2d; 3, Humphrey on Escalon Bo-peep. Junior yearling—1, Humphrey on Calla Grove Merry Princess; 2, Smith on Mysie's Poppy of Claremont. Senior heifer calf—1, Humphrey on Escalon Lassie; 2, Smith on Mysie's Cherry of Claremont 2d; 3, Humphrey on Escalon Maggie. Junior heifer calf—1 and 2, Humphrey on Escalon Rose and Escalon Flossie; 3, Smith on Unnamed. Cow having official yearly record begun under the age of five years—1, Smith on Mysie's Star of Claremont; 2, Humphrey on Fairy of Alfalfa Farms.

Senior champion bull—Escalon Challenger. Junior champion—Escalon True Type. Senior champion cow—Escalon Fairy. Junior champion—Escalon Evangeline. Grand champion bull—Escalon Challenger. Reserve—Escalon True Type. Grand champion cow—Escalon Fairy. Reserve—Escalon Bo-peep.

Aged herds—1, Humphrey; 2, Smith. Young herd—1, Humphrey; 2, Smith. Calf herd—1, Humphrey; 2, Smith. Get of sire—1, Humphrey; 2, Smith. Produce of dam—1, Humphrey; 2, Smith.

The Ayrshires

With but two herds competing the showing made by the Ayrshire was a distinct credit to the breed and averaged as high in quality as any of the dairy classes.

H. H. Kildee of Iowa was the judge and said he had been at few shows where the general level of quality was superior to the cattle shown by J. Henry Meyer of San Francisco and E. B. McFarland of San Mateo. Meyer took all championships except the junior and reserve grand championship.

Elkhorn Public Opinion was again given premier honors and Highland Ithan, a grand and bonnie coo', held her usual place.

The awards follow:

Two year olds—1, Meyer on Holehouse Secretary Imp.; 2, McFarland on Steybrae Improver. Senior calf—1, Meyer on Elkhorn Public Opinion; 2, McFarland on Steybrae Master Douglas. Junior calf—1,Meyer on Elkhorn Royal Review; 2, 3 and 4, McFarland on Ayrmont 359, Ayrmont 361 and Steybrae Bobbie Burns.

Aged cow—1, 4 and 5, Myer on Highland Ithan, Curfew Bell 3d and Hardcroft Favorite Imp; 2 and 3, McFarland on Willowmoor Happy Girl and Willowmoor Vesta 4th. Three year olds—1 and 2, McFarland on Lady Stair of Steybrae and Auchinbay Jean 8th; 3, Meyer on Torr of Elkhorn. Two year olds—1, 3, 4 and 5. McFarland on Steybrae Ellen, Steybrae Hangle, Steybrae Grace Darling and Steybrae Jeannie Deans; 2, Meyer on Robin's Lucy of Elkhorn. Senior yearling—1 and 3, Meyer on Baron's Snow Maid of Elkhorn and Baron's Bright Eyes of Elkhorn; 2, McFarland on Steybrae Kirsty. Junior yearling—1, McFarland on Burnside Miss Courtney; 3, Meyer on Elkhorn Kirsty. Senior heifer calf—1,

You'll Like These Holsteins

The registered Holsteins to be sold at Tulare are noteworthy in more respects than one:

FIRST. They represent some of the most popular families of heavy producers, and the cows in the sale include a number with official records up to over 26 lbs. butter in seven days.

SECOND. There are many fresh cows and others in calf to some of the best bred yearly record bulls in California in the offering. These are a first class investment anywhere, any time.

THIRD. The sale includes daughters or granddaughters of such famous bulls as Pontiac Korndyke, Sir Korndyke Hengerveld De Kol, Sir Aaggie De Kol Acme, King Segis Alcartra Prilly, Johanna McKinley Segis and others of high merit, and many of them are bred to KING KORNDYKE PONTIAC 20th, Higdon's $6500 son of Miss Valley Mead De Kol Walker, SIR AAGGIE DE KOL ACME 2nd, Whaley's son of Aralia De Kol 3d, his five nearest dams averaging over 1150 lbs. butter in one year; Phillips' SIR PIETERTJE KORNDYKE ORMSBY, son of Sir Pietertje Ormsby Mercedes, the greatest sire of yearly record producers and show ring winners of the breed; Post-Card Ranch's KING PONTIAC PIETERTJE ORMSBY, a 31 pound son Spring Farm King; Sturgeon's SEGIS PONTIAC ABBEKERK, half brother to the $11,000 bull and out of the only 35 pound cow in California that made over 34 lbs. at previous freshening; and to other bulls of equally substantial breeding.

FOURTH. Every animal in the sale is positively guaranteed to be a breeder. EVERY ANIMAL OVER SIX MONTHS OF AGE IS TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER.

The Sale Will Be Held at

Sales Pavilion, Tulare, Cal.

Tuesday, November 25, 1919

Beginning at 10 A.M.

CONTRIBUTORS TO SALE:

W. J. HIGDON, Tulare.
ALEX WHALEY, Tulare.
R. C. STURGEON, Tulare.
J. P. PHILLIPS, Fresno.
L. Y. MONTGOMERY, Fresno.
POST-CARD RANCH, Corcoran.
H. J. STEVENS, Visalia.

TAKE NOTICE!

THE HIGHEST PRICE paid for a car load of fat hogs at the California International Livestock Show came from the

BASSETT

Herd of Advance Type Poland Chinas

Many firsts, seconds, senior champion sow and GRAND CHAMPION SOW were won in the open classes, proving without a single doubt we are breeding the kind the packer wants and the farmer should raise. Animals of all ages, high class young boars, bred sows and gilts for sale at reasonable prices.

M. Bassett & Son **Hanford, Cal.**

Lendorris Ranch

Good boars will not make a good herd without good sows. A visit to our ranch will prove to you that the matrons mantained have no superiors on the coast. Young, big type, Poland Chinas from good mothers by such boars as Lendorris Liberty Bond, Young Jumbo and Liberator. For sale at reasonable prices.

W. L. Haag & Son **Hanford, Cal.**

Blood Will Tell

In the show ring, in the feed lot or on the butcher's block. The Poland Chinas bred by me fulfill all these requirements. They make money for me and they will for you. My prices for good breeding animals are always reasonable.

Eugene Miner **Lodi, Cal.**

Golden West King

was such a superior type of a big Poland China boar that as a junior boar pig he was made GRAND CHAMPION BOAR at the California International Livestock Show. His litter mate, second to him in class was regarded by the judge as practically his equal. My winnings at the State Fair, Stockton, and at San Francisco, prove my claims for superior Poland Chinas. Eastern judges and breeders pronounce them the equal of any seen at the big eastern shows. I have these kind for sale at reasonable prices.

J. F. LEHMAN **LODI, CAL.**

Come to Paradise

and see my big type Poland Chinas; grandsons and daughters of Caldwell's Big Bob. One of his best sons heads my herd. Also the home of Whiz-Bang. Get my prices and breeding and satisfy yourself that I offer the kind you want.

J. H. Cook **Paradise, Cal.**

Come and See Them

Our Big Type Poland-Chinas are the real kind of hogs. If you can't come write for what you want. We have them if you want the prolific, quick growing, big type kind.

Poland China Ranch H. B. Peake Mgr. **San Bernardino, Calif.**

YOUNG HERD BOARS SIRED BY THE YANKEE JR.

a Poland China boar with no superiors and few equals. Get an outstanding herd boar bred right and of the right type. The demand for the blood of The Yankee, Jr. is strong—some will be disappointed by not placing their order early as a number are alrcady sold. Write for prices and full particulars.

John M. Bernstein **Hanford, Cal.**

The Swine Show at San Francisco

By B. S. Bennett

FROM the opening to the closing day the swine department was one of the main attraction of the show. A numher of the good herds seen at Los Angeles were there and these were augmented by hreeders from the central part of the state and territory adjacent to the show. It was particularly pleasing to note that while some of the older hreeders were exhibitors most of the entries came from the herds of the younger hreeders. The outstanding feature of the show and the one that attracted the greatest attention was the fat barrow contest, and at no time during the judging of these classes was there lack of interest or ringside attention. Let us hope that every fair in the state will in the future arrange for like classifications. The judging commenced early Monday morning and was not finished until late Wednesday afternoon and interest in the various classes was sustained throughout. The judges were H. H. Kildee of the Iowa state agricultural college, Ames, and W. H. Pew, breeder of Poland China swine and Shorthorn cattle, Ravenna, Ohio. Both men have national reputations as judges, and did their work in a rapid, pleasing manner and not a single "kick" was registered relative to the placings. All the exhibitors were from California with the exception of Roy E. Fisher, Lincoln, Nebraska, who showed Duroc-Jerseys and Hampshires.

Berkshires

The Berkshires were the first classes judged and were represented by the herds of six breeders, with J. Francis O'Connor, Santa Rosa, and A. B. Humphrey, Escalon, aving the largest number of entries. Anchorage Farm, Orland, making its first show, captured the highest honors in the hoar classes, winning grand championship on Natomas Baron Duke, that won similar honors at the last state fair. In the sow classes, J. Francis O'Connor duplicated his Los Angeles winning of grand champion on his senior sow pig, Castleview Premier Belle. The classes for senior and junior hoar pigs and senior and junior sows were the outstanding features and afforded the hottest contests of the show.

The exhibitors were: J. Francis O'Connor, Santa Rosa; A. B. Humphrey, Escalon; Anchorage Farm, Orland; A. L. Stephenson, Los Molinos; J. H. Rosseter, Burke; F. B. Anderson, Sacramento; Mrs. John J. Weber, Yuba City. H. H. Kildee was the judge. Following are the awards:

Aged boar — 1 and 2, Humphrey on Grape Wild Emblem and Grape Wild Farm Leader; 3, Stephenson on Wilsonia Chief Leader. Senior yearling—1 and 2, O'Connor on Rose Crest Rival 3d and Castleview Rival Champion. Junior yearling—1, Anchorage Farm on Natomas Baron Duke. Senior pig—1, Humphrey on Escalon Type; 2, 3 and 4, O'Connor on Escalon Artful 5th, Rival's Leader 2d and Rosecrest Rival 7th. Junior pig—1 and 2, Humphrey on Escalon May Bob and Escalon Royal Leader; 3 and 5, O'Connor on Castleview Rival Duke 2d and Castleview Rival Duke; 4, Anderson on Natomas Leader.

Aged sow—1 and 2, Humphrey on Leader's Jeanette and Leader's Artful Belle; 3 and 4, Rosseter on Princess Lee 46th and Princess Lee 47th; 5, Stephenson on Wilsonia Laurel. Senior yearling—1 and 2, Humphrey on Royal Polly 2d and Escalon Emblem Queen 2d; 3 and 4, Rosseter on Wiklup Princess 2d and Wiklup Princess. Junior yearling—1 and 2, Humphrey on Escalon Artful Belle 6th and Escalon Emblem Belle; 3, Anchorage Farm on Anchorage Star 36th; 4, Anderson on Natomas Symboleer Beauty; 5, Anchorage Farm on Anchorage Ruby Lee 2nd. Senior pig—1, O'Connor on Castleview Premier Belle; 2, Humphrey on Leader's Artful Belle 8th; 3, Anchorage Farm on Superior May 31st; 4 and 5, Humphrey on Grape Wild Rose 6th and Grape Wild Rose 7th. Junior pig—1 and 4, Humphrey on Grape Wild Rose 8th and Escalon May 11th; 2 and 3, O'Connor on Castleview Rival Duchess and Doubles Duchess; 5, Anderson on Natomas Leader Beauty.

Senior champion boar, Natomas Baron Duke. Junior champion boar, Escalon Type. Senior champion sow, Emblem's Escalon Belle. Junior champion sow, Castleview Premier Belle. Grand champion boar, Natomas Baron Duke. Reserve, Escalon Type. Grand champion sow, Castleview Premier Belle. Reserve, Emblem's Escalon Belle.

Aged herd—1, Humphrey. Young herd—1, Humphrey; 2, O'Connor; 3, Anderson; 4, Stephenson. Herd bred by exhibitor—1 and 2, Humphrey; 3, O'Connor; 4, Anderson; 5, Stephenson. Get of sire—1, Humphrey; 2, O'Connor; 3, Anderson; 4, Stephenson. Produce of dam—1, O'Connor; 2, Anderson; 3, Stephenson.

Western Berkshire Congress Specials

Boar bred by exhibitor—1, Humphrey; 2, O'Connor; 3, Anderson; 4, Stephenson; 5, Webber. Sow bred by exhibitor — 1 Humphrey; 2, O'Connor; 3, Stephenson; 4, Anderson; 5, Webber. Junior barrow—1, Humphrey; 2, O'Connor; 3, Hollis; 4, Graham.

Duroc-Jerseys

Eight California herds and one from Nebraska met in this division and put up a show that reflected great credit on this hreed of swine. F. M. Johnson won top honors for hoars on his King Orion Jr., which was made grand champion of the show. This boar, one of the hest individuals shown this season, has extreme length and depth, large hone, is very masculine in appearance and will, no douht, be heard from as one of the state's leading sires of Duroc-Jerseys. Conejo Ranch had no trouble in winning grand championship for sow with Grand Lady 66th as she was the class of the show. H. H. Kildee was the judge.

The exhibitors were, F. M. Johnson, Napa; Conejo Ranch, Newbury Park; H. M. Berglund, Dixon; Jersey Queen Farm, San Jose; J. E. Thorp, Lockeford; S. E. Whiting, Sacramento; Western Laboratory Serum Farm; J. H. Rosseter, Burke; Roy E. Fisher, Lincoln, Nebraska.

Aged boar—1, Johnson on King Orion Jr.; 2, Berglund on California Orion King; 3, Fisher on National Critic. Senior yearling—1, Conejo Ranch on Model Lad. Junior yearling—1, Conejo Ranch on Giant Wonder; 2, Fisher on Nebraska Orion; 3, Jersey Queen Farm on Lucy Orion's Model; 4, Whiting on Defender of Hazel Louise Ranch; 5, Rosseter on Beautiful Defender. Senior pig — 1, Conejo Ranch on Big Model; 2, Fisher; 3, Whiting on Top Sensation 2nd; 4, Fisher on Sensation Wonder. Junior pig—1, Western Lab.; 2 and 3, Conejo Ranch on Giant Type and Wonder's Choice 1st; 4 and 5, Thorp on You'll Do Prince and You'll Do Regulator.

Aged sow—1, Conejo on Grand Lady 66th; 2 and 4, Thorp on Happy Lass of Mossdale and Delight of Mossdale; 3, Jersey Queen Farm on Model D.; 5, Berglund on King Orion Lady. Senior yearling—1, Conego on Great Wonder Lady 17th; 2, Fisher on Rainbow Lady. Junior yearling—1 and 2, Conejo on Wonder's Bell and Lady Model 3rd; 3 and 5, Fisher; 4, Thorp on Miss You'll Do. Senior pig—1, 2 and 3, Conejo Ranch on Lady Model 1st, Lady Model and Lady Model 2d; 4, Thorp on Reggie's Twilight of Mossdale; 5, Whiting on Fancy Maid of Mossdale. Junior pig—1, Thorp on Reggie's You'll Do; 2, 3 and 4, Conejo on Giant Bell, Giant Bell 1st and Giant Bell 2d; 5, Whiting on Princess Delight.

Senior champion boar, King Orion Jr. Junior champion boar, Big Model. Senior champion sow, Lady Model 1st. Grand champion boar, King Orion. Jr. Reserve, Big Model. Grand champion sow. Grand Lady 66th. Reserve, Wonder's Bell.

Aged Herd, 1, Conejo; 2, Fisher; 3, Thorp. Young Herd, 1 and 3, Conejo; 2, Thorp. Herd bred by exhibitor, 1, Thorp; 2, Berglund. Get of sire, 1 and 2, Conejo; 3, Fisher. Produce of dam, 1 and 3, Conejo; 2, Fisher.

Poland Chinas

This great breed of swine which has made such a rapid advance the past few years in California was not represented by as many herds nor to the degree to which it is rightfully entitled. Only three breeders entered their herds but these three put up a strong show with honors pretty evenly divided. Golden West King, a junior boar pig from the herd of J. F. Lehman, was made grand champion. It is rather unusual for a hoar of this age to win such honors. but he is a real outstanding individual and King's Timm, from the Bassett herd, his strongest opponent, was not in the condition he was at the state fair, having now been shown at four different fairs and gone through a severe sick spell in the meantime. Hopeful from the Bassett herd was not only the grand champion but was the highest class sow of the show. McCarty & Starkweather were 1, 2, 3, 4 in the senior sow pig class and if these young sows are carried on and properly developed they will, in the opinion of the judge, make a great showing in the senior yearling classes next year. W. H. Pew was the judge.

The exhibitors were M. and A. L. Bassett, Hanford, McCarty and Starkweather, Modesto; J. F. Lehman, Lodi. Following are the awards:

Senior yearling boar—1, Bassett on Kings Timm. Junior yearling—1, Bassett on Model Fellow, Jr.; 2, McCarty and Starkweather on King Jones Over. Senior boar pig—1, Bassett on Golden Model. Junior boar pig—1, 2, 3, 5, Lehman on Golden West King, Queens King, Lehman's King, Long King; 4, Bassett on Big Smooth Gerstdale.

Aged sow—1, Bassett on Hopeful; 2, McCarty and Starkweather on Mc's Miss Wonder. Senior yearling sow — 1, 2, 3, Bassett on Jumbo Dorris; Big Smooth Model, Big Model Maid. Junior yearling

sow—1, Lehman on Bobetta. Senior sow pig—1, 2, 3, 4, McCarty and Starkweather on Nuggett Nell, Long Prospect, Stylish Wonder, California Poppy; 5, Bassett on Big Princess Model. Junior sow pig—1, Bassett on Gerstdale Best; 2, 3, 4, Lehman on Lady King, King's Queen, Miss Goldie; 5, McCarty and Starkweather on Master Lady.

Senior champion boar, King's Timm. Junior champion boar, Golden West King. Senior champion sow, Hopeful. Junior champion sow, Gerstdale Best. Grand champion boar, Golden West King. Reserve, King's Timm. Grand champion sow, Hopeful. Reserve, Gerstdale Best.

Aged herd—1, Bassett. Young herd—1, Lehman; 2, McCarty and Starkweather; 3, Bassett. Herd bred by exhibitor—1, Lehman; 2, McCarty and Starkweather; 3, Bassett. Get of sire—1, Lehman; 2, McCarty and Starkweather; 3, Bassett. Produce of dam—1, Lehman; 2, McCarty and Starkweather; 3, Bassett.

Hampshires

Two California herds and one from Nebraska made up the show for this breed of swine. While this breed has firmly entrenched itself in Southern California it has not, as yet, made much headway in the central and northern part of the state. The showing made at this fair will no doubt create a demand for this breed in this section and will therefore be of much benefit to both the breeders and the breed.

Roy E. Fisher won grand championship for boar on Black Beauty, Conejo Ranch getting the reserve on Rex 2d. Fisher also won the sow grand championship on Duke's Flosine 2d. W. H. Pew was the judge.

The exhibitors were: Conejo Ranch, Newbury Park; C. J. Gilbert, Lancaster; Roy E. Fisher, Lincoln, Nebraska. Following are the awards:

Aged boar—1, Conejo on Challenger; 2, Gilbert on Harvester Again. Senior yearling boar—1, Conejo on Liberty. Junior yearling boar—1, Fisher on Black Beauty; 2, 3, Conejo on Conejo Prince, Conejo Duke Allen; 4, 5, Gilbert on True Allen, Quality Allen. Senior boar pig—1, Fisher on Young Tip; 2, Gilbert on Harvester's Echo. Junior boar pig—1, 2, Conejo on Rex II, Rex I; 3, Gilbert on Chief Harvester.

Aged sow—1, Fisher on Duke's Florine II; 2, Gilbert on Wavelet; 3, Fisher on Elice N.; 4, Gilbert on Mary Pickford; 5, Conejo on Gypsie Maid. Senior yearling sow—1, Fisher on Flora S.; 2, Conejo on Choice Maid. Junior yearling sow—1, 2, 3, 4, Conejo on Florine 2nd, 4th, 5th, 3rd; 5, Gilbert on Mary Allen. Senior sow pig—1, Fisher; 2, 3, Conejo on Rose Tipton, Miss Tipton; 4, Fisher; 5, Conejo on Perfect Maid. Junior sow pig — 1, Fisher; 2, Gilbert on Mary Again; 3, 4, 5, Conejo.

Senior champion boar, Black Beauty. Junior champion boar, Rex II. Senior champion sow, Duke's Florine II. Junior champion sow, Fisher. Grand champion boar, Black Beauty. Reserve, Liberty. Grand champoin sow, Duke's Florine II. Reserve, Flora S.

Aged herd—1, Fisher; 2, 3, Conejo. Young herd—1, 3, Conejo; 2, Fisher. Herd bred by exhibitor—1, Conejo; 2, Gilbert. Get of sire—1, Conejo; 2, Fisher; 3, Gilbert. Produce of dam—1, 2, Conejo; 3, Gilbert.

Chester Whites

C. B. Cunningham, Mills, was awarded all firsts and championships on the most excellent herd he showed.

Yorkshires

Lloyd and Tointon, Santa Rosa, awarded all firsts and championships.

Tamworths

Dr. Jas. J. Summerfield, Santa Rosa, awarded all firsts and championships.

THE BARROW AND FAT HOG SHOW

Nothing at the livestock show attracted wider interest or had greater educational value than did the contests in this division. Practically all breeds had entries, but for championship honors the fight was between the Poland Chinas entered by M. and A. L. Bassett, Hanford, and the Berkshires entered by A. B. Humphrey, Escalon. Bassett had the champion single barrow in the class for barrows farrowed before February 1, 1919, while Humphrey had the champion single barrow farrowed after March 1, 1919. The Bassett entry was made the grand champion barrow of the show and this animal was pronounced by the judges as the best barrow seen for several years at any of the big shows. It was reported that he would be shown at the International Livestock Show, Chicago, in December. In the contest for pen of three barrows the Humphrey entry won grand champion pen on three barrows farrowed after March 1, 1919, over the Bassett entry. While the champion barrow was one of the pen of three shown his individual excellence was not strong enough to carry his two mates to the top against the three highly finished Berkshires shown by Humphrey.

In the carload lots there were three entries in the class for heavy packers weighing over 250 pounds. Napa State Hospital was first on a load of Berkshires, M. and A. L. Bassett second on Poland Chinas and Western Meat Company third on Duroc-Jerseys.

In the light packers class, 175 pounds and under 250 pounds, the Western Meat Company was first on a load of Poland Chinas, M. and A. L. Bassett second on Poland Chinas and Napa State Hospital third on Berkshires.

The Berkshires shown in the heavy packer class were made the grand champion carload on the entry of the Napa State Hospital.

The awards in all classes were as follows:

Berkshires

Senior barrow—1, University of California. Junior barrow—1, 3, Humphrey; 2, O'Connor. Pen of three junior barrows—1, Humphrey; 2, Hillis; 3, Graham. Champion barrow and champion pen of barrows—Humphrey.

Chester Whites

Senior barrow—1, 2, and 3, C. B. Cunningham, Mills. Junior barrow—1, 2 and 3, Cunningham. Pen of three senior barrows—1, Cunningham. Pen of three junior barrows——1, Cunningham. Barrow and pen of barrows, Cunningham.

Duroc-Jerseys

Senior barrow—1, 2 and 3, University of California. Junior barrow—1, 2 and 3, V. F. Dolcini, Davis. Pen of three senior barrows—University of California. Pen of three junior barrows—V. F. Dolcini.

Hampshires

Junior barrow—1, Conejo Ranch, Newbury Park; 2, Roy Fisher, Lincoln, Nebraska; 3, C. J. Gilbert, Lancaster. Pen of three junior barrows—Gilbert. Champion barrow—Conejo Ranch. Champion pen of barrows—C. J. Gilbert.

Poland Chinas

Senior barrow—1 and 2, M. and A. L. Bassett, Hanford; 3, University of California. Junior barrow—1, 2 and 3, M. and A. L. Bassett. Pen of three senior barrows—1, M and A. L. Bassett; 2, Miller & Lux, San Francisco. Pen of three junior barrows—M. and A. L. Bassett. Champion barrow and champion pen of barrows—M. and A. L. Bassett.

Yorkshires

Senior barrow—1, Lloyd and Tointon, Santa Rosa. Junior barrow—1, 2 and 3, Lloyd and Tointon. Pen of three junior barrows—Lloyd and Tointon. Champion barrow and champion pen of barrows—Lloyd and Tointon.

Grades and Cross-breds

Junior barrow—1, 2 and 3—J. C. Finlay, Sacramento. Pen of three barrows—1, J. C. Finlay.

C. Finlay. Champion senior barrow—M. and A. L. Bassett, Poland China. Champion junior barrow—Humphrey, Berkshire. Grand champion barrow—M. and A. L. Bassett, Poland China. Champion pen—Humphrey on Berkshires. Reserve—M. and A. L. Bassett, Poland Chinas.

FEEDING DISEASED CARCASSES MAY SPREAD TUBERCULOSIS

Warning against the feeding of diseased cattle carcasses to hogs is sounded by the United States department of agriculture. A conference of state and federal officials, held early in October to deal with matters of tuberculosis eradication, brought to light numerous instances where hogs contracted tuberculosis after feeding on carcasses of tuberculous cattle. In one case nearly an entire drove of hogs showed lesions of tuberculosis which at first the owner could not account for. Later he admitted to the veterinarian investigating the case that several months before he had fed to the hogs the carcass of a cow that "never did very well."

The bureau of animal industry urges livestock owners to have a careful autopsy made on animals dying on the farm or killed because of sickness, in order that the definite cause of trouble may be learned. Carcasses that show lesions of infectious diseases should not be fed. Instead, such carcasses should be cared for so that no part can be eaten by hogs. Thorough destruction of the carcass by burning, or by deep burial under a liberal application of quicklime, is the proper procedure in such cases. Attention is called also to the danger of feeding offal from slaughtered animals to swine, as such a practice is another source of infection.

ANOTHER CURE FOR THE BALKY HORSE

"Our Dumb Animals" is authority for this cure:

The next time your horse balks, try putting a little dust, or sand, from the wayside on his tongue. It is quite effective in getting his mind away from his determination not to move.

Her Health Was Not Left to Chance

The cows that make the big milk records are well fed and well bred, to be sure. But, above all, they are in the pink of condition. The constant strain of heavy milk production will wear down the vitality of the digestive and genital organs in the best of cows, and the result is such ailments as Abortion, Retained Afterbirth, Barrenness, Scouring, Bunches and Milk Fever. Any of these diseases can be successfully treated and eliminated with KOW-KURE, the great cow medicine. The medicinal properties of this famous remedy act directly on the organs of production and reproduction, putting the cow's system back to normal, healthy action. Feed dealers and druggists sell KOW-KURE: 60c and $1.20 packages. Consider cow-health first, and your dairy will be a leader, and a money-maker. Our free treatise,

"THE HOME COW DOCTOR,"

will give you valuable pointers on how to treat and prevent cow diseases. Ask for your copy.

Dairy Association Company
Lyndonville, Vt.

KOW-KURE

Health Pays!

This perfect three-year-old Jersey has a yearly milk record of 17,793 lbs. Nothing short of 100% health would make such a record possible.

Try raising the health standard of your cows; it will increase your milk profits.

Pure Hawaiian Cane Molasses

Pork Production

By actual test will increase pork production five-tenths pounds daily over a barley and tankage feed, yet it sells for less than half the price.

Milk Production

One of our customers writes: "We are out of molasses and our cows are falling off in their milk badly, hence we would appreciate immediate shipment. Kindly ship us two tons more in addition."

We supply it in barrels or tank cars for shipment anywhere.

W. H. Young Company

Holbrook Bldg. San Francisco

Is a Calf Worth 23 Cents?

For 23 cents you can insure your calves against death from Blackleg by having them vaccinated with PURITY BLACKLEG AGGRESSIN. (The Kansas Germ Free Blackleg Vaccine.) One treatment immunizes for life and there is no danger in introducing Blackleg into healthy herds of cattle. We also manufacture and sell PURITY ANTI-HOG CHOLERA SERUM, PURITY MIXED VACCINE for swine, and PURITY HEMORRAGHIC SEPTICEMIA VACCINES for cattle and sheep. Stop your losses and increase your profits—it's good business. For service that counts, and does not end by selling, write, wire or phone

Continued from Page 693.

Meyer on Elkhorn Heatherflower; 2 and 3, McFariand on Ayrmont 354 and Ayrmont 363; 5, U. of C. on California Barcheskie. Junior heifer calf—1 and 3, McFariand on Steybrae Jessica and Steybrae Elta; 2, Meyer on Elkhorn Thistledown; 4, U. of C. on California Barcheski 2d.

Senior champion bull—Holehouse Secretary Imp. Junior champion—Elkhorn Public Opinion. Senior champion cow—Highland Ithan. Junior champion—Burnside Miss Courtney. Grand champion bull—Elkhorn Public Opinion. Reserve—Holehouse Secretary Imp. Grand champion cow—Highland Ithan. Reserve—Burnside Miss Courtney.

Aged herd—1, Meyer; 2, McFarland Young herd—1, McFariand. Calf herd—1 and 2, McFariand. Get of sire—1, 2 and 3, McFariand. Produce of dam—1, McFarland; 2, Meyers; 3, U. of C. Dairy herd—1, McFariand; 2, Meyer.

The Milking Shorthorns

The milking Shorthorns turned out one of the good shows of the week with closer competition than the list of awards indicates. The Misses Alexander & Kellogg of Sulsun made a clean sweep of the championship honors and in so doing had to pass some of the good individuals at the head of classes wherein they were not even contenders.

Thomas Harrison of Santa Rosa was put at the top of the aged bull class with his Foothills Pioneer by W. H. Pew of Ravenna, Ohio, but Alexander & Kellogg nosed him out for grand champion. Creditable showings were also made by Leon F. Douglas of San Rafael.

The awards in this class follow:

Milking Shorthorns

Aged bull—1, Harrison on Foothills Pioneer; 2, Douglas on Potrero Darlington. Two year olds—1, Alexander & Kellogg on Westward Ho. Senior calf—Harrison on Count Thickset. Junior calf—1 and 2, Alexander & Kellog on Innisfail Favorite and Innisfail Heggle.

Aged cow—1 and 2, Alexander & Kellog on Believue Daisy and Lady Beatrice. Two year olds—1, Harrison on Welfare's Bell; 2, Alexander & Kellogg on Bessie Rose 2d. Senior yearling—1 and 2, Alexander & Kellogg on Valley Bell 6th and Beggar Maid's Beauty 2. Junior yearling—1 and 2, Alexander & Kellogg on Valley Belle 6th and Beggar Maid's Beauty 2d. Junior yearling—1 and 2, Alexander & Kellogg on Innisfail Daisy Maid and Roan Lilly 5th. Senior heifer calf—1, Harrison on Glen Dorothy; 2, Alexander & Kellogg on Annabel. Junior heifer calf—1, Alexander & Kellogg on Francisca; 2, Harrison on Frantic Girl.

Senior champion bull—Westward Ho. Junior champion—Innisfail Favorite. Senior champion cow—Believue Daisy. Junior champion—Valley Bell 6th. Grand champion bull—Westward Ho. Reserve—Innisfail Favorite. Grand champion cow—Bellevue Daisy. Reserve—Valley Bell 6th.

Aged herd—Alexander & Kellogg. Young herd—Alexander & Kellogg.

The Dutch Belted

Frank Reed Sanders of Phoenix, Arizona, exhibited a few representative individuals of the breed.

The Draft Horses at California International

What was probably the strongest showing of draft horses made in California since the P. P. I. E. came before Dean C. F. Curtiss of Ames, Iowa, for judgment. Each of the leading breeds was represented and no one herd had a monopoly on quality.

N. W. Thompson of Patterson won every first place in the Percheron classes in which he entered, and his big, clean legged flash moving three year old Sensation, was made champion. Barring tendency toward rather refined underpinning and a hoof head that might be larger, his quality, top, style and character made him a popular winner. The University won the stallion colt class with a very promising youngster, L'Aiglon, that is put up on proper lines and is particularly good in his legs, joints and feet.

The aged mares made a strong class, with four good greys from the University stud rather outstanding. The judge preferred the good topped, light boned Fernand's Lucille to the better moving Poule of Paicines and the better balanced Fernand's Lottie. Palo Alto Percheron Farm was at the top with a cracking good black three year old that could have been tied champion. L. A. Hall won the two year old class and Ruth Maxwell the yearling class. The University showed three filly foals into the top three places.

Easton and Ward made a notable showing of Shires and won every class except that for filly foals, which was won by Merritt-Bowers. Anwick Arthur was champion stud, and the sensational mare, Blackhawk Chessie, was champion mare. This same firm was out with a number of high class hitches, the judge declaring that their pair of mares could go anywhere. Few establishments in the country are capable of making as high class showing of the British horse of draft.

Merritt & Bowers and N. W. Thompson were the principal exhibitors of Belgian stallions. The roan Brussels shown by Merritt & Bowers was champion and La Conrier from the Thompson stable won reserve. The Ratto Stock Farm captured most of the mare awards, and their aged mare, Paula de Lens, was champion.

While fewer in numbers, than the other herds, the Clydesdale show was of higho rder. The Dibblee Estate and both championships. Bonnie Edward, their champion stallion, is one of the best representatives seen in this state in years. He is right above and right below and moves according to the most approved Clydesdale standards. O. H. Brandt had the reserve champion mare in Dibblee's Bonnie Bloom.

Shires

Aged stallion—1, 2 and 3, Easton & Ward on Anwick Arthur, Salvador Conqueror and Dovecote King. Three year olds—1 and 2, Easton & Ward on Blackhawk Senator and Blackhawk Forest King. Yearling—1, Easton & Ward on Blackhawk Clansman. Stallion foal—1 and 2, Easton & Ward on Blackhawk King and Blackhawk Model.

Aged mare—1 and 2, Easton & Ward on Blackhawk Chessie and Hawton Bounce; 3, Merritt & Bowers on Wrydelands Model. Two year olds—1 and 2, Easton & Ward on Blackhawk Forest Queen and Blackhawk Belladonna. Yearlings—1 and 2, Easton & Ward on Blackhawk Alberta and Blackhawk Choice. Filly foal—1, Merritt & Bowers on Eloise.

Champion stallion — Anwick Arthur. Reserve—Blackhawk Senator. Champion mare—Blackhawk Chessie. Reserve—Blackhawk Forest Queen. Get of sire—1, Easton & Ward. Produce of dam—1, Easton & Ward.

Belgians

Aged stallion—1, 2 and 3, Merritt & Bowers on Brusseis, Adonis and Cadet of Paicines. Three year olds—1 and 2, Thompson on La Courier and Cob; 3, Ratto on Clarion de Lenz. Two year olds—1, Merritt & Bowers on Dewey. Yearlings—1, Merritt & Bowers on Liberty.

Aged mare—1 and 2, Ratto on Paula De Lens and Bell de Mars; 3, Merritt & Bowers on Mina.

Champion stallion—Brussels. Reserve—La Courier. Champion mare—Paula de Lens. Reserve—Bell de Mars. Produce of dam—Merritt & Bowers.

Clydesdales

Aged stallion—1, Dibblee on Bonnie Edward. Three year olds—1, Dibblee on Prince Edward. Two year olds—1, Dibblee on Royal Wilsone. Stallion foal—1, Brandt on Fairlands Pride.

Aged mare—1, 2 and 3, Brandt on Victoria, Cricket and Jean Morrisson. Three year olds—1, Dibblee on Bonnie's Darling. Two year olds—1, Dibblee on Bonnie's Bloom; 2, Brandt on Jessica Derby. Yearlings—1, Dibblee on Bonnie Rosebud; 2, Brandt on Annette Morrison. Filly foal—1, Dibblee on Bonnie Rosebud 2d.

Champion stallion—Bonnie Edward. Reserve—Royal Wilsone. Champion mare—Bonnie Bloom. Reserve—Victoria. Get of sire—Dibblee.

Percherons

Aged stallions—1, Thompson on Kerry; 2 and 3, Merritt & Bowers on Inquiet and Palo Alto Prince. Three year olds—1, Thompson on Sensation; 2, Merritt & Bowers on Woodland. Two year olds—1, Thompson on Pedro; 2, Merritt & Bowers on Colore; 3, Maxwell on Rigel. Yearlings—1, Thompson on San Gabriel; 2 and 3, Hall on Sammie and May Boy. Stallion foal—1, U. of C. on L'Aiglon; 2 and 3, Maxwell on Aldebaran and Antar Brilliant.

Aged mares—1, 2 and 3, U. of C. on Fernand's Lucile, Fernand's Lottie and Poule of Paicines. Three year olds—1, Palo Alto on Palo Alto Bedlia. Two year olds—1, Hall on Palo Alto Ciara. Yearlings—1, Maxwell on Adalet. Filly foal—1, 2 and 3, U. of C. on Silver Leaf, Victorie and Fern Leaf.

Grand champion stallion—Sensation. Reserve—Kerry. Grand champion mare—Fernand's Lucile. Reserve—Palo Alto Bedlia. Get of sire—1 and 2, U. of C.; 3, Palo Alto. Produce of dam—1, U. of C.; 2, Palo Alto.

THE SHEEP SHOW AT SAN FRANCISCO

The sheep division was the best balanced show seen in California in several years and it is honed that the sheep breeders of California and the West will make strong efforts to keep alive the interest developed at San Francisco. Bullard Bros., Woodland, annexed all the Rambouillet championships. Butte City Ranch, Butte City, had the champion Shropshire ewe and the Ratto Stock Farm, Napa, had the champion Shropshire ram. The University of California and C. Harold Hopkins of the Conaway Ranch, Woodland, divided the Hampshire championship with Calla Grove Farm, Manteca, a strong contender. The University also showed Southdowns and Romneys and Ellenwood and Ramsey of Red Bluff exhibited a few Corriedales. Frank Brown of Carleton, Oregon, judged.

AUCTION SALE OF FAT STOCK AT SAN FRANCISCO

Following the judging of the fat steers, sheep and swine classes at the California International, many of the winners were sold at public auction, the result of which appears below. Col. Ben A. Rhoades of Los Angeles conducted the sale and was assisted by Professor J. S. Thompson, of the University Farm and C. L. Hughes of Sacramento.

First prize Shorthorn steer consigned by Ormondale Co., Redwood City, to D. M. Linnard, Palace Hotel, San Francisco, 20c per pound.

Third prize Shorthorn steer consigned by T. T. Miller, Hollister, to D. M. Linnard, 20c per pound.

Second prize Angus steer consigned by University Farm, Davis, to Napa State Hospital, 17c per pound.

Three Duroc barrows, consigned by V. F. Doicini, Davis, to South San Francisco Packing Co., 15½c per pound.

Four Yorkshire barrows, consigned by Lloyd and Tointon, Santa Rosa, to South San Francisco Packing Co., 15½c per pound.

Fourth prize Chester White barrow, consigned by C. B. Cunningham, Milis, to South San Francisco Packing Company, 15½c per pound.

First prize senior Berkshire barrow and third prize Poland China barrow, consigned by University Farm to South San Francisco Packing Company, 14c per pound.

First prize yearling wethers, consigned by University Farm to Gehl Packing Company, Santa Barbara, 13c per pound.

Third prize, 15 head steers, consigned by Newhall Land and Farming Company, San Francisco, to Western Meat Company, 13¾c per pound.

Reserve champion lot 15 steers, consigned by C. Swanston and Son, Sacramento, to California Meat Company, San Francisco, 14¾c per pound.

First and fourth prize lots, two cars steers, consigned by Western Meat Company, to C. B. Harris, Los Angeles, 15c per pound.

First prize and champion carload Berkshire heavy packer hogs, consigned by Napa State Hospital, to Western Meat Company, 15¾c per pound.

Third prize carload Berkshire light packer hogs, consigned by Napa State Hospital, Napa, to Western Meat Company, 15¾c per pound.

Second prize carload Poland China, heavy packer hogs, consigned by M. Bassett, Hanford, to Western Meat Company, 17c per pound.

Second prize carload Poland China, light packer hogs, consigned by M. Bassett to Western Meat Company, 16c per pound.

CARLOT CLASSES AT SAN FRANCISCO

A feature of the San Francisco Livestock Show was the unexpected exhibits in the carlot classes for cattle, sheep and swine.

Over 20 full loads were in the various pens, and notwithstanding that in some instances more finish and quality might be desired, it is certain that no California show has served quite so well to encourage the finishing of fat stuff. If the initial show is taken as an index, future shows will be notable.

The Western Meat Company won first and fourth in carlots of steers over three years old, including the champion carlot of the show. The Kern County Land Company of Bakersfield won second, and the Newhall Land and Farming Company of San Francisco third. C. Swanston & Sons of Sacramento won the first prize and reserve champion carlot of fat cattle in the class for two year old steers. Practically all the carlots of steers were Herefords.

The Western Meat Company also won first prize with a carlot of fat sheep, carrying along the championship award in this class. The Foster Company was second and reserve champion, and the Union Land & Cattle Company third.

No less than six carlots of hogs were entered, and the rivalry between the adherents of the different breeds made this show one of the keenest of the week. The awards follow:

Car load fat hogs weighing 250 pounds—1, Napa State Hospital on Berkshires; 2, M. and A. L. Bassett, Hanford, on Poland Chinas; 3, Western Meat Company on Duroc-Jerseys.

Carload fat hogs weighing 175 pounds to 250 pounds—1, Western Meat Company; 2, M. and A. L. Bassett; 3, Napa State Hospital.

Grand champion carload—Napa State Hospital.

Live Stock News Notes

LIVESTOCK SALE CALENDAR

Holstein Cattle

November 25. Registered Holsteins, California Breeders Sales and Pedigree Company, Tulare.
December 18-19, A. W. Moris & Sons, Woodland.

Duroc-Jersey Swine

January 28, Diamond Bar Ranch, Spadra, Los Angeles County.
January 29, Winsor Ranch, Bonita, sale in Los Angeles.
January 30, Ireland Ranch, Owensmouth, Los Angeles County.

Percheron Horses

November 25, Sam Wade & Son, Enterprise, Oregon.

Following their successful auction on October 21 the Tulare County Poland China Breeders Association has set Friday, February 6, as the date for their second annual sale of pedigreed open and bred gilts. The sale will be held at the sales pavilion of the Tulare County Live Stock Association at Tulare, where the previous sale was held.

Seventy-five head of pedigreed Holsteins will be offered at the first annual sale of the Tulare County Live Stock Association at their sales pavilion at Tulare on November 25, with the California Breeders Sales and Pedigree Company in charge of the event. The association, with the cooperation of the Tulare Board of Trade, raised $15,000 for the purchase of the ground and erection of buildings and the sales pavilion was opened only a short time ago. The place promises to be the scene of one or more big stock sales every month and is becoming the stock show place of the San Joaquin Valley.

Martin Bros. of Visalia report that three of their sows, bred to California Big Bone leader, have littered eight, 12 and 14 pigs and that all the young Polands are showing up in fine shape and promise to be classy animals. The sows are prize winners, having taken ribbons at the Tulare and Visalia fairs.

Next Wednesday, November 19, the Fresno County Poland China Breeders Association will hold its second consignment sale of 50 bred sows, bred and open gilts and young boars. Walter C. Ficklin, secretary of the association, states that the sale is attracting attention from various parts of the state, due no doubt to the variety of blood lines to be found in the sale.

Fresno Evolution, a sow of the $25,200 Poland China boar Evolution sold in the August sale of Wm. E. Green, Algona, Iowa, has been secured by Walter C. Ficklin, Fresno, as an addition to his present herd of big type Polands. Fresno Evolution has for his dam the $1,750 sow Big Fancy Maid 2nd. Mr. Ficklin is consigning two gilts bred to this boar to the breeders sale to be held in Fresno November 19.

Prof. J. I. Thompson of university farm has purchased from Castleview Ranch, Santa Rosa, the Berkshire boar Rose Crest Rival 6th for the College of Hawaii, Honolulu. Another boar from the same ranch goes to F. E. Crowell, Alpaugh.

J. F. McSwain, Merced, who breeds Poland Chinas and had, in Big Model Fellow, the reserve grand champion boar at the last state fair, has been gathering together a large number of good sows and gilts for mating with this boar. He will on February 21, 1920, offer an attractive lot at public sale in Merced. Recent sale includes a bred gilt to M. M. Reiman, Planada; two bred gilts and a boar to T. R. McSwain, Merced; a young boar to W. M. Sell, Ahwahnee. and open gilts to Clarence Alvord, LeGrand; Harmon Morley, Merced, and Neta Parti, Athlone.

E. R. Eichner, Selma, who breeds Jersey cattle and Poland China swine, has now on official test nine of his Jersey cows which bid fair to make very creditable records. At the head of his herd is the bull Undulata Prince, sire of Brilliant Jersey Queen, the grand champion cow at the last state fair. At the head of his Poland China herd is Cal. Bob Wonder, a half brother to Caldwell's Big Bob.

T. Caesar & Son, Reedley, breeders of Poland China swine, have been making some additions to their herd of sows, including the top of the Haag and Bernstein sale. Big Lady M., for which they paid $570. It is the intention of Messrs. Caesar to reduce their herd to about eight sows of the highest breeding and type they can secure. They are using at the present for herd boar a young son of the famous Haag boar, Young Jumbo.

The Poland China breeders of Merced County have awakened to the necessity of organization and cooperation. As the result of a recent meeting they organized the Merced County Poland China Breeders' Association, with 12 members, and other breeders have signified their intention of joining the organization. The following officers were elected: J. F. McSwain, president; M. B. Cross, secretary, and J. A. Martin, M. M. Reimon and P. M. Mitchell directors.

John Kincaid of East Bakersfield is using a young Duroc boar sired by the noted hog Joe's Orion Cherry King 5th of Ira Jackson's breeding, the dam coming from the Waltemeyer herd of Iowa. The young boar is registered as Orion Cherry King Jr. He is a February 27 pig and weighs 375 pounds in breeding form. This is correct foundation blood for a great herd of Durocs in a good man's hands in Kern County.

A. R. Doctor owns a nice little alfalfa and Poland China ranch at Van Nuys. Less than a year ago Mr. Doctor selected a young boar pig sired by President from the John M. Bernstein herd. This young boar has made phenomenal development and gives promise of making an outstanding show boar for 1920. At 12 months he stands at 400 pounds. He is 64 inches in length, 54 inches both heart and loin, with ten inch bone. Mr. Doctor has 31 pigs in his first four litters sired by this boar, Bell's Hanford Boy.

The latest acquisition to San Fernando Valley livestock interests is the equipment of a new home for the Whitley Durocs. This is under the management of Mrs. Ross E. Whitley, whose 400 acre ranch is to have for its primary purpose the very best development of her favorite breed of swine, the Duroc-Jersey. Every feature of this equipment is strictly modern in type and bespeaks utility and permanency in every plan. The place is known as the Tu-Tock-A-Nu-La Ranch. It is located about one mile south of Van Nuys on Ventura boulevard and will be one of the show places of San Fernando Valley.

L. R. Hitchcock, Van Nuys, owns the 12 months old boar Nutmeg Gano, who is quite the picture of his famous sire Orion's King Gano. Mr. Hitchcock also owns a dozen spring gilts that are to be mated with this boar. These gilts are of high class blood lines and of good size for age. and clean cut in type and conformation. The first litter by Nutmeg Gano consisted of eight sow pigs and three boars out of the fine Uneeda Model sow, Jeanette.

One of Southern California's up to date business herds of registered Holstein cattle is that owned by W. D. Millard at Arcadia. A foundation sire for this herd is Aralia De Kol Pontiac Salambo 175997, with 25 of his get now in herd. His dam's record is 950 pounds butter in one year, milk 22,097 pounds; second dam's butter record one year is 1,003 pounds, milk 22,287 pounds. Mr. Millard also secured 19 head of cattle from the well known Ginn herd at Corcoran and five high class cows from the McAllister herd at Chino. The great three year old bull now in service is King Paul Korndyke Vale, by the noted King Korndyke Sadie Vale. The six nearest dams of this young bull averaged 30 pounds butter in seven days. His sire stands in a class by himself with a 40 pound dam, a 40 pound sister and a 40 pound daughter. It is a herd to be reckoned with in the future.

The sale of unregistered Herefords held at South San Francisco, November 8 by H. M. Barngrover of Santa Clara demonstrated the results to be expected from the use of pure bred bulls. Cows sired by pure bred bulls and rebred sold around $150; yearling

Announcement

52 SHORTHORNS

at Public Sale

State Fair Grounds, Sacramento, Cal.

Tuesday, December 11

The offering for this sale comes from one of the oldest established herds in the West, that of W. C. Short, Reno, Nevada, and this being his initial sale he has selected a splendid lot of well bred useful cattle. Most of the offering consists of bred and open heifers and a number of strong, well developed bulls, ready for service.

The offering will be presented in pasture condition. All are good deep reds, and sell tuberculin tested and as guaranteed breeders.

GEORGE W. BELL
A BUSINESS AUCTIONEER
When in need of high class auctioneering service I would be glad to have breeders and farmers correspond with me. I have had years of experience, know values and know pedigrees. I am selling for many of the leading breeders of California and am prepared to deliver the same results that have attracted this custom. Terms reasonable. Write, wire or phone.
GEORGE W. BELL Tulare, California

SUCCESSFUL RANGE MANAGEMENT

Many people who have visited the Salt River Valley of Arizona and taken the trip by auto from Phoenix to Glendale have inspected the fine beef feeding plant, including silos, sheds and yards, of E. C. Cavness of the Burnt Ranch Cattle Company. Here each year large numbers of cattle are fattened upon feeds produced in the Salt River Valley.

A few facts concerning the range activities of the company are supplied through County Agent H. C. Heard of Maricopa County:

"A number of years ago Mr. Cavness and a brother established a range on the head of Lime Creek about 65 miles north of Phoenix. The range had previously suffered from no management and had been pretty well grazed out with both sheep and cattle. At that time there were a great number of Shorthorn dairy cattle in the Salt River Valley, and from these the Cavness brothers stocked their ranch. When the range came under the direction of the forest service there was, of course, considerable skepticism on the part of most ranchers and a hesitancy to take out grazing permits. Mr. Cavness soon took out a permit for 400 head of cattle and was awarded a good sized basin which was more than sufficient for their cattle. The topography, however, was such as to prevent the range being divided so other operators were kept off.

"In the first year or so nearly as many strange cattle drifted into this range as those that belonged there. Cavness Brothers put in a series of drift fences and were later allowed to fence the entire range. As soon as they could protect their cattle from intermingling they took out all of the old bulls and restocked with good pure bred sires. As a result the ranch, which at present belongs to a brother of Mr. Cavness, is now entirely stocked with pure bred Shorthorns, though the cows have not been registered. Furthermore, the calves have been consistently dehorned and as a result all of the cattle are now hornless.

"This trial of Shorthorns came in the face of an accepted opinion that Shorthorn cattle were unable to care for themselves on the range. In spite of this the Cavness Brothers have made a distinct financial success out of the place and have found the Shorthorns were good rustlers even on their ranch, which is very rocky. It is the opinion of Mr. Cavness that Shorthorns need more range than Herefords, but are much better feeders when ready for the lot, and keep up especially well in quality.

"The Burnt Ranch herd consists of about 4,000 head of cattle. The range is largely grama grass and browse with a number of various weeds. The best part of this range is kept for a bull pasture, and in the winter time all of the bulls are put in this pasture. Most of those that have been in one winter go back of their own accord, and out of 200 or more bulls probably only about ten per cent have to be rounded up and put in the pasture. During the winter those bulls are inspected every week or so, and any that are beginning to get thin are brought to the corral and fed. Mr. Cavness firmly believes that bulls cannot be of the best service unless they are kept in good condition, and by the time they are turned on the range again there are relatively few that have not had some feeding. They are allowed all the salt they can eat and are put on the range usually from Middle Western points in a fat condition.

"Furthermore, his summer and winter range is kept separate and the grazing is therefore increased. Because of the system of removing bulls from the range and keeping them in good condition, and dropping the calf crop in the most desirable season (April is the heaviest month), Mr. Cavness gets a calf crop of probably 60 per cent where most ranchers probably get only 50 per cent. Mr. Cavness rather expects the calf crop to increase with the addition of new blood."

BUTTER AND CHEESE SCORING CONTEST

The third scoring of the California Educational Butter and Cheese Scoring Contest will be held in connection with the Creamery Operators Association Convention at Davis on November 20. All entries must be shipped not later than Monday, November 17, and addressed Dairy Industry Division, University Farm, Davis, California.

The practical butter makers short course is to be held at the university farm from November 10 to 19 inclusive. This course offers an excellent opportunity for the practical buttermakers to brush up in their work.

On Thursday, November 20, or the day following the short course, there will be held the scoring contest, a buttermakers' judging contest, a meeting of "California Butter, Cheese and Ice Cream Makers' Association," and the opening session of the California Creamery Operators Association Convention. The convention of the Creamery Operators will be continued through Friday and Saturday.

This is the first time that California buttermakers have had a chance of attending all of these meetings during a two weeks' vacation. For further particulars address S. L. Denning, University Farm, Davis.

OVERCOMING THE HAY SHORTAGE

A very practical way of meeting the present hay shortage is through the use of beet top silage, 30 pounds of which per day per steer will reduce the animal's hay requirements by one-half.

On many fields as much as five tons per acre of silage can be had when the tops are promptly gathered and put into piles immediately after the beets are topped. This prevents scattering and waste. The farmer after gathering the tops should pile them in a pit silo, packing them down firmly and sealing them over with fresh beet pulp or earth. A satisfactory silo may be made by scooping out a hole of suitable size and lining the sides and bottom with straw before filling. After 30 days, on opening the pit a fine quality of warm, succulent feed will be available. The silage has a value equal to about one-half the value of hay. The feed should be collected handy to the feeding yards. The silage comes out of the pit in warm, appetizing conditon all through the winter feeding period. In fact, some growers hold a part of the silage for summer feeding to supplement the short grass season when pastures are suffering for lack of moisture.

The silage is good for beef or dairy cattle and also for sheep. When fed in regulated amounts excellent results are had. Much larger values are had from beet tops when siloed and fed as a blended ration than when grazed off the field in the usual way. Saving one-half of the hay crop is a big item this season where a hay shortage exists.

GENEROUS COWS NEED GOOD GRAIN RATION

With the pasturing season at an end every owner of dairy cows should begin to plan his winter feeding, says C. H. Eckles, University Farm, St. Paul. Cows often suffer more for lack of feed between the time when winter feeding in earnest begins than they do after winter is really at hand. Every experienced feeder has learned that it is easy to let cows decline in milk as a result of poor feed, but very hard to bring them back. A good production for the year is possible only when the cow is kept at a high level of milk production all the time.

The foundation of all good dairy rations is a succulent feed, either silage or roots, and alfalfa. Just as soon as the grass begins to get short, therefore, the feeding of silage and hay should begin. It never pays to scrimp on roughage. Let the cows have as much as they will eat up clean all the time. That is what a cow is for—to convert roughage into milk. If silage and legume hay are on hand the rest of the feeding problem is not so hard.

A good grain mixture should contain at least three different feeds, one of which is rather high in protein. A good grain mixture for cows of medium production is ground corn or barley four parts, oats or bran two parts, linseed meal one part.

The grain fed should vary with the milk produced. The man who feeds all his cows the same amount of grain never feeds economically. The cow that is milking heavily is the one to receive the liberal grain allowance. A good rule to follow with reference to amount of feed, adds Mr. Eckles, is to give one pound of grain to each three pounds of milk produced by a Guernsey or Jersey, and one pound of grain to each three and one-half pounds of milk by a Holstein.

NATIONAL SWINE SHOW AT DES MOINES NEXT YEAR

The officers of the National Swine Growers Association have just decided to hold the Fifth Annual National Swine Show and Exposition at Des Moines, Iowa, in 1920. The show will fall in the same position in the circuit of fairs and expositions as it has in the past. On account of the fact that all shows will be one week later on account of Labor Day, the National Swine Show and Exposition in 1920 will be held during the week beginning October 4.

PRACTICAL STUDY OF MARKETING

Courses in marketing of farm products are now offered by many agricultural schools. A three day short course in livestock marketing for managers of cooperative associations is announced by the Missouri college of agriculture. These will be held in two of the principal stock markets. Instruction will be given in grading stock and accounting. The managers will also have opportunity to discuss their common marketing problems.

The cooperative livestock shipping association affords a means whereby the farmer feeding stock in less than car lots can get just what his stock brings on the central market, less shipping expenses. So far as marketing is concerned, this organization puts the small feeder on a level with the man who feeds a carload at a time.

State Game Warden Joe Prochaska of Arizona is recommending the employment of trappers and hunters in the Sitgreaves national forest to protect the herd of elks from destruction by lions and wolves

MALTHOID
and
RU-BER-OID
READY ROOFINGS

Good Roofing Pays

Sun and rain are the two worst enemies of roofing, particularly the sun because it draws the vitality—the life—right out of ordinary roofing.

That's why *good* roofing is always cheapest. It has the long-lasting qualities—the ability to *resist*. You can depend upon it to protect the contents of your home, barn, garage, warehouse or shop for years, and it costs little or nothing for repairs.

Tough, long-fibre rag felt and highly waterproof, sun-resisting, saturative and coating compounds are scientifically and skillfully combined to make Malthoid and Ru-ber-oid roofings. *Quality* is built in at every step, and every step is supervised by experts of long experience. We have been making Malthoid and Ru-ber-oid for over eighteen years.

It pays to roof with Malthoid and Ru-ber-oid because of their remarkable resistance to the elements, and consequent long life and freedom from repair expense.

LIVESTOCK NEWS NOTES

Continued from Page 697.

bulls sold in lots up to $230, and bull calves averaged $150. The principal buyers were the Berryessa Cattle Co., San Francisco; J. F. Dunne, Gilroy; Silliman Bros., Watsonville; S. W. Cheney, Chico and the La Honda Stock Farm, La Honda. C. L. Hughes managed the sale and Col. Ben A. Rhoades of Los Angeles was the auctioneer.

John A. Bunting, Mission San Jose, secretary of the Pacific Coast Hereford Breeders' Association, and H. H. Gable, Esparto and H. M. Barngrover, Santa Clara, directors of the association, are attending the American Royal Livestock Show at Kansas City. Bunting and Gable expect to remain East for the International at Chicago and plan to visit a number of the leading Hereford herds of the East.

Professor J. I. Thompson of the university farm, Davis, is attending the Pacific International Livestock Exposition at Portland. Thompson will also attend the International at Chicago.

The champion Poland China barrow shown by M. Bassett of Hanford at the recent San Francisco show will compete at the great Chicago show. The Bassett barrow made a strong impression on the Eastern judges at San Francisco and it is expected that he will be a factor at the Eastern show.

The Edinger-Johnston Co., Hood, disposed of all their grade Holsteins at a sale held November 12. Prices ruled very satisfactory, cows making a general average of $115. This firm has been one of the heaviest buyers at recent Shorthorn sales.

At Last—It's Here!

A Great Leverless Tractor Disc
with an

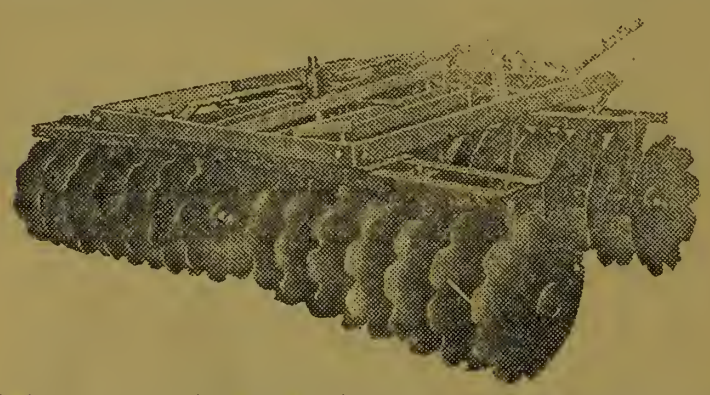
AUTOMATIC ADJUSTABLE HITCH.

It offers more advanced ideas of construction than were ever before presented

You can get a disc now without levers sticking up on it to break off tree limbs or to break your back "throwin' her out" of the ground.

We have ready for distribution a new tractor disc with the best automatic features ever invented.

The angle of the disc is given by pulling a rope attached to a trip lever on the disc and brought forward to the tractor. To change from straight to working angle all that is necessary is to pull the rope attached to the trip lever which sets the disc to any angle desired.



Besides the automatic features which give this disc an advantage everyone desires, the automatic is one of the heaviest and strongest ever constructed, having braces and cross braces of steel angle irons. This is not a trailer type harrow. It is absolutely impossible for the rear gang to trail the furrows made by the front gang. The frame is rigid. The disc cuts down ridges, fills up holes and levels the ground. Every feature of the construction is for utility and hard service. Made for tractors in 5, 6, 7, 8, 9 and 10 ft. sizes with either 18 or 20 inch cutaway or solid discs. Farmers who expect to buy discs soon should be sure to see this new automatic disc with its many improved features. All sizes on display at the Sales Rooms of

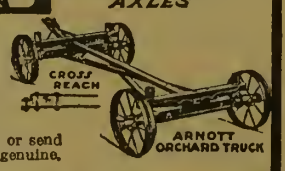
E. P. Bosbyshell Co.

127 North Los Angeles Street
Los Angeles, California

Write for name of your nearest dealer showing this disc.

GROOVED TIRE STEEL WHEELS — **FARM TRUCKS** — HICKORY AXLES

We carry in Los Angeles stock the largest assortment in the Southwest. Well finished and painted. Guaranteed in every way Hickory axles. Steel wheels with grooved tires. Wood or steel gears. Nothing handier around the farm. Prices $47.25 and up. Your dealer will take your order, or send to us direct. Don't accept imitations. Our name on every axle if genuine. Call and look them over when in the city, or write for Catalogue.



ARNOTT & COMPANY, Inc., 112-18 S. Los Angeles St., Los Angeles

"The Goat'airy"

— Raise Goats on Shares —

Want party with suitable range and some milk to raise kids on the shares.

Will have probably 100 well-bred doe kids the coming season. Our stock is select—3-quart does the minimum. Many 4 to 5-quart does in herd.

SIRES—Pure-bred bucks of highest standing: Nubian, Inkyo Yusif 861; Saanen—Sir Barnaby 3531; Toggenburg—Fairy 1930. Have won many prizes on these sires at shows this year. Address

"The Goat'airy," 320 W. Ave. 45, Los Angeles

One of the largest deals in registered Shorthorns made in California this year was recently closed when the Caledonia Farms, West Sacramento, sold to the Edinger-Johnston Co., Hood. 25 cows with heifer calves at foot. Many of the cows are rebred to the famous bulls at the head of the Caledonia herd.

The dispersal sale of Hereford cattle held at San Francisco, November 10, by the Diablo Stock Farm, Danville, distributed a useful class of cattle to a number of new buyers at prices that represent conservative values. Aged cows sold up to $280 and the top price for a bull was $500, the price paid by John Buck, Sr., San Francisco, for the aged bull, Bertram Fairfax, a grandson of Perfection Fairfax. It was stated that this bull was to be shipped to the Hawaiian Islands. T. A. Work, Monterey, bought 12 head, P. H. Hoare, Hayward, took five. Other buyers were: H. M. Barngrover, Santa Clara; Owen Hollister, Lompoc; E. L. Farley, Raymond; L. F. Buchetto, Oakdale; Geo. A. Clough, San Francisco; A. T. Devoy, Island Mountain, and J. A. Niles, Portersville. The sale was managed by C. L. Hughes of the California Breeders Sales and Pedigree Co., Sacramento, and Col. Ben A. Rhoades of Los Angeles was the auctioneer.

The Tulare County Poland China Breeders Association have claimed February 6 as the date for their next consignment sale to be held at Tulare.

At a recent meeting of the Durham Livestock Breeders Association, it was decided to purchase four Holstein bulls at prices around $1000 each. Three of the bulls were secured from the Jane Garden Farm, owned by Fred Kiesel of Sacramento. The fourth bull was selected from the University Farm herd.

Frank B. Anderson, Sacramento, secretary of the Western Berkshire Congress, has claimed December 2 as the date on which he will hold his first public sale of Berkshires. The sale will be held at the state fair grounds and will consist of 40 head of bred sows, gilts and boars, including a number that were shown at the fall fairs.

On December 11, W. C. Short of Reno, Nevada, will sell at the state fair grounds, Sacramento, 52 head of registered Shorthorn bulls and females. This sale is Mr. Short's initial offering and it is expected that the sale will appeal to those interested in cattle of conservative values. Ord L. Leachman of Sacramento has the sale in charge.

GOOD HOLSTEINS IN TULARE SALE

An unusually attractive lot of registered Holsteins will be sold at public auction in the new Sales Pavilion at Tulare on Tuesday, November 25, from seven of the leading herds in the lower San Joaquin Valley. Buyers will find a large number of highly bred young cows and heifers from which to select, and many of them are bred to the wonderfully well bred yearly record bulls that have gone into this territory as herd headers within the past two years. It is safe to say that no more attractive Holsteins have appeared in the fall sales to date, and as the cattle are sold guaranteed to be breeders and subject to tuberculin retest by the buyer they should meet with a good reception on sale day. The sale is under the management of California Breeders Sales and Pedigree Co., Sacramento, with Col. Ben A. Rhoades of Los Angeles on the block and Col. Geo. W. Bell, Tulare, in the ring.

THE AMERICAN HAT

In 1918 the little island of Trinidad in the West Indies imported hats from the United States to the value of $10,812. Eight times that value in hats comes from England for the price is lower. But the better classes purchase largely of American hats of all kinds for men, women and children. As the sales are made largely from travelers' samples, the method of salesmanship must be practiced by American manufacturers and jobbers.

MORRIS WILL SELL SOME OF THE TOPS

The unfortunate fire which destroyed the great cow barn, the four silos, a large quantity of mill feed. and the season's hay crop on the A. W. Morris & Sons Corporation farm at Woodland, caused some hasty and necessary changes in the plans of this big breeding firm. It was found absolutely necessary to reduce the size of the herd at the earliest possible date, and after careful survey it was found that at least 70 head must go. These will be sold at public auction at Sacramento on Thursday, December 18. This is conceded to be the best bred large lot of cattle that has ever left the Morris herd in one group, the females being practically all daughters of the herd bulls that have been proven and made famous in the Morris herd. A very large number of the females are three and four year olds, and but for the present necessity would be kept in the herd and still further developed. An outstanding feature of the sale is the fact that the females are all bred to bulls from dams with records of over 1000, 1100 and 1,300 pounds butter in one year, all of them being the present Morris herd sires. In making up the list of bulls to be offered in the sale it was found that steady sales had kept the bull crop down to a point where there were only ten bulls of service age on the farm, and every one of them will be sold in this sale. It will thus be the only opportunity buyers will have to secure a bull of service age from the Morris herd until some months from now when the younger ones will have reached service age. The sale will be conducted by California Breeders Sales and Pedigree Company, Sacramento, with Col. Ben A. Rhoades Los Angeles, on the block.

ELKHORN AYRSHIRE SALES

J. Henry Meyer, who maintains the Elkhorn Ayrshire herd at Watsonville, reports the sale of two high class bulls.

One, Elkhorn Statesman, was purchased by the University of California to head their Ayrshire herd at Davis. Professor Gordon H. True selected him from among a number of good individuals. His sire is a grandson of the world's record Ayrshire cow, Garclaugh May Mischief, with a record of 25,329 pounds of milk and 1,053 pounds of butter. His dam, Polly Puss III, has a two year old record of 9,198 pounds of milk and 452 pounds of butter, test 4.18 per cent fat; a junior four year old record of 9,394 pounds of milk and 464 pounds of butter, test 4.19 per cent fat; and a senior four year old record of 13,194 pounds of milk and 612 pounds of butter, test 3.98 per cent fat. She is at present on A. R. test again and for the first ten months of her lactation period has produced over 14,000 pounds of milk testing over four per cent fat.

The other young bull, Rena's Laddie of Elkhorn was sold to Edwin A. Wells, a noted Ayrshire breeder of British Columbia. The sire of this young bull is a son of Lotus Jean Armour, the highest priced cow at the last National Ayrshire Sale held in Massachusetts, the consideration being $8,100. Her dam, Jean Armour III, is the world's record three year old Ayrshire, having produced 21,983 pounds of milk and 1,003 pounds of butter. This youngster's dam, Rena Ross III, is a member of the famous Rena Ross family.

LOS ANGELES GOAT DAIRY

Four years ago J. A. Winans established a goat dairy out in the Highland Park district of Los Angeles known as "The Goatalry." Today there are 200 high class does in the herd, 75 of them milking at this time. As seen today the herd is practically of Mr. Winans' own breeding. It is strictly a commercial enterprise, with up to date equipment and twice a day delivery service. The three quart doe is the minimum as standard for production. However, the outstanding doe Starlight has made a four weeks' record of seven quarts per day; and there are many others with four and five quart records. The Nubian-Saanen cross is the favorite for milk production. The great Nubian sire Inkyo Yusif 861 is the leading show buck of the breed, winning the blue ribbon at Los Angeles Livestock Show.

POTATO IMPROVEMENT

It has been general practice for the farmer to save his best ears of corn and his poorest potatoes for seed purposes, though he never knew why selection should not work alike in both cases, which it surely does. Now, not only does the careful farmer save the best ears of corn, but the best ears from the best producing stalks. The potato farmer is not only looking for the best individual potatoes but considers the hill yield of still greater value. His goal is the most, as well as the best potatoes he can grow. The value of the potato crop, the quick and sure cash returns, the value of the potato in crop rotation and its great importance as a food have led to the closest scientific and practical study of crop production, and the outcome of this has been organization of potato growers' clubs, potato growers' departments in farm bureaus and, still further, seed potato growers' associations whose members market certified seed potatoes. The California potato grower of today demands a clean, smooth, shallow eyed, true to name, uniform seed, free from disease, adapted to his particular soil and climate and of strong vitality. And he can get it. This state has made wonderful strides in the development of potatoes and none need send east for seed potatoes, in fact, he who does will prove a loser. Occasionally seed runs out, but a new supply should be procured from other sections of the Pacific Coast.

State Nurserymen

The Nurserymen's Convention held at Chico at the same time as the State Fruit Growers' Convention, had somewhat smaller attendance than usual though there were members present from all sections of the state, but the fewer number present had no effect upon the punch given to the various sessions by snappy discussions and effective action. The live things started by the convention included a movement for the establishment by nurserymen of a great testing out or standardizing orchard. It was determined to organize a company with $100,000 capital, which should investigate and plant trees for the purpose of securing seed, scions and buds the quality and productive power of which are known to be the highest. This movement was understood by some to have the scope of a great trust or co-operative nursery in which all nurserymen of the state would unite. It is that in no sense, but, as noted, simply for the purpose of securing seeds and scions. The committee named for perfecting the organization of the $100,000 corporation is Geo. C. Roeding, Max J. Crow, Wm. P. Kirkman, J. E. Bergholdt and H. A. Hyde.

The nurserymen also plainly set forth their attitude on the Japanese question. When the subject was first presented one nurseryman reported material loss and discomfort because Japanese had worked a boycott and he questioned whether it would be wise to touch upon the question in a public way. This, however, brought quick response from practically everyone present that California nurserymen were nothing if not patriotic and full-blooded Americans. Ringing resolutions appealing to Governor Stephens for quick action were unanimously passed.

Discussion of the establishment of a standard of size in nursery stock was continued from the Riverside convention at which it was first broached.

The ladies' auxiliary of the nurserymen, of which Mrs. John Vallance was president, failed to secure a quorum, but it is expected a large attendance will be secured at the next convention which will be held in Fresno.

The officers elected are: President, J. E. Bergtholdt; vice presidents, H. A. Hyde, Will C. Wood, L. H. Elmer, James Mills and Geo. C. Roeding; secretary-treasurer, Henry Kruckeberg. Board of directors: J. E. Merriweather, chairman; R. M. Teague, Leonard Coates, W. T. Kirkman, Jr., and H. J. Shearer.

Upper row: At left, Geo. C. Roeding, Byron O. Clark, Henry Kruckeberg, Will C. Wood, Max J. Crow. Two at lower right, with overcoats: Frederick Maskew, R. C. Nougaret. Standing at Mr. Roeding's right: E. D. Copeland. Hands in pockets: J. E. Bergtholdt. At his right: H. A. Hyde.

Prune and Apricot Growers Campaign for Membership

The board of directors of the California Prune and Apricot Growers, Inc., has notified its 8,000 grower members that the continuance of their farmers non-profit organization beyond March 1 next depended upon the signing for the association of an additional 20,000 acres of prunes and 6,000 acres of apricots before that date.

The directors informed the association members that unless this new acreage was signed it would not exercise the option it holds to purchase the growers' crops in 1920 and 1921. Failure of the association to exercise these options would mean the collapse of one of the strongest fruit growers' organizations which the California farmers have ever formed and would leave the prune and apricot industry in the chaotic state which existed prior to 1917 when the growers were at the mercy of the independent dried fruit packers.

The value of the growers' organization, according to the association officers, was proven conclusively this fall, when after three years of existence the association obtained for its members the best price they have ever been paid for their fruit and established hundreds of them on a firm business basis.

H. G. Coykendall, general manager of the California Prune and Apricot Growers, Inc., said yesterday that there was no doubt but that sufficient new members would be obtained to make up the 26,000 acres demanded, but explained that the motion was adopted by the board of directors to give the farmers fair warning that a crisis faced their organization which must be met unflinchingly by every prune and apricot grower in the state.

Pointing out the necessity of demanding greater support for their marketing organizations by the fruit growers of the state, H. C. Dunlap, organization manager of the association, said yesterday that young orchards already planted would double the prune yield of the state by 1924. He said there are 80,000 acres now producing prunes in California and estimated that 14,000 acres were coming into bearing annually. The production of dried apricots he figured would increase even more rapidly.

Organization meetings to be attended by growers and influential business men of the prune and apricot producing districts of the state will be begun immediately under the direction of Dunlap to complete plans for the acreage campaign. Meetings arranged for to date will be held at Chico, Colusa, Yuba City, Corning, Santa Rosa, Healdsburg, Geyserville, Napa, Vacaville, Suisun, Winters, Visalia, Hanford, Kingsburg, San Jose, Hollister, Haywards, Santa Paula, Hemet and Santa Rosa.

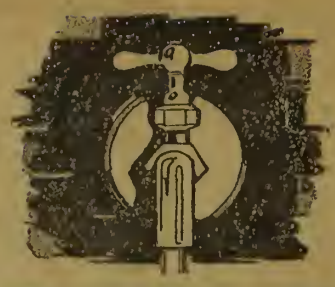
For All Water Power



BOSCH

HIGH TENSION MAGNETO

Fairbanks-Morse "Z" Engines use Bosch High Tension Magneto Ignition. Largest Magneto order goes to Bosch.

Big pumping systems that irrigate thousands of acres—Small power pumps that give the farm running water—all serve better when a properly designed Bosch High Tension Magneto equipt Gas Engine supplies the power stream.

Fairbanks-Morse Engineers, after the most searching comparative tests, selected the Bosch High Tension Magneto for their famous "Z" engines. The price they paid for Bosch is more, but the dependable service "Z" engine users get puts price consideration last.

Any fuel in every size "Z" engine, from 1½ to 20 Horse Power gives more power with Rip-Roaring Bosch Sparks.

Bosch High Tension Magneto Ignition will also give you equally efficient results on your Automobile, Tractor or Truck.

ARSENICAL WAR BABIES

Continued from Page 679.

kinds of calcium and lead arsenates are equal, but for practical purposes the acid and the basic types only are of interest. All investigators agree that the acid type is too soluble in water to permit its use on foliage. It has been uniformly observed by those who have studied the matter that this solubility is reduced to an insignificant quantity in the presence of lime water or milk of lime. It is suspected, however, that the acid type is converted into a neutral or basic type by this treatment, the properties of which are discussed below. The solubility defect of the acid type makes further discussion of its properties of no concern to the student of insecticides, even though the material is known to be satisfactory in respect to its other properties.

A pure neutral calcium arsenate was prepared by Robinson who found that it was considerably less soluble in water than the acid salt. The experiments of this investigator showed that if lime were added to a suspension in water of either type of calcium arsenate, the lime almost disappeared from the solution up to a certain point, but if added in sufficient quantity to be present in solution even in a slight excess, no soluble arsenic could be detected in solution. The phenomenon of removal of lime from solution in this manner strongly sugests the formation of basic arsenates, but the matter has not been investigated. At any rate the experiences of all investigators, both in the laboratory and in the field, have plainly shown the need of excess of lime to reduce the solubility of all calcium arsenates in order to permit their use as a spray.

Stability Under Weather Conditions

Inasmuch as both the commercial calcium arsenates and the home preparation almost invariably contain an excess of lime, they probably may be considered either neutral or basic types, but not of definite composition nor of uniform poison content. The reports concerning safety to plants are based upon the use of either the commercially or home prepared material, and it is not surprising that conclusions are at times contradictory as noted in the introductory paragraphs. This fact and the wide variation in climatic conditions under which the experiments are made cannot do otherwise than lead to diverse results.

Judging from an impartial survey of all the information available, the writer is of the opinion that calcium arsenate, as now commonly prepared, is considerably less stable than acid lead arsenate when exposed to the weather and does not compare at all favorably with the basic type of lead arsenate. It is possible, however, that future experimentation will develop a compound of lime and arsenic which will be more resistant to the solvent action of water and the weather than preparations now available.

As a combination spray with lime-sulphur solution, calcium arsenate is of more than usual interest. Both insecticides being of the same base, calcium, the tendency for chemical action is reduced to a minimum. In fact, the experiments of Robinson have shown that there is no chemical change when the two are mixed. This is in sharp contrast to the results when acid lead arsenate and lime-sulphur solution are mixed when a number of reactions occur resulting in the liberation of a large amount of soluble arsenic, free sulphur, and the formation of lead sulphide.

Carbon dioxide when passed through a suspension of either acid or neutral calcium arsenate in water has an appreciable solvent action on the arsenicals, but this is diminished in the presence of excess lime.

Action on Insects

Calcium arsenate has been found to be a little slower in its action on insects than lead arsenate when equivalent amounts of poison were used.

Poison Content

The commercial materials contain roughly 18 to 50 per cent arsenic pentoxide, many of which contain a too large proportion of arsenic to be used with safety to foliage. Neither the "C.P." nor the commercial compounds are above criticism.

The pure salt of the acid type containing 64 per cent arsenic pentoxide is too soluble in water to permit its use on foliage. Sanders emphasizes that the neutral salt only should be purchased for use in Nova Scotia. Robinson's experiments have confirmed the soundness of this view. The pure neutral salt carries about 58 per cent arsenic pentoxide, which is also more than the percentage usually found in the commercial material. It is therefore evident that the commercial article is quite impure, probably containing excess lime which would tend to lessen its toxicity to plants. The pure neutral salt contains about the same amount of poison as Paris green, although being an arsenate, it is probably less active. The commercial material, however, only contains about one-third more poison than acid lead arsenate, and being somewhat slower in its action about equal quantities of a 40-45 per cent calcium arsenate and lead arsenate would be expected to be equally toxic to insects.

The fineness of particles of a well made home preparation and the better grades of factory products is above criticism and compares favorably with that of the best of the arsenicals.

The specific gravity of calcium arsenates is about half that of lead arsenates.

Adhesiveness. The adhesive qualities of calcium arsenate are reported to be excellent, remaining on foliage in abundant quantities even after heavy rains.

Cost. Calcium arsenate sells at a lower price than lead arsenate, but has not been on the market a sufficient length of time to have established a price sufficiently definite for comparison.

Summary

The solubility in water of the pure compounds prohibits their use on plants but this solubility is diminished by the addition of excess lime. Laboratory tests have shown that carbonic acid decomposes calcium arsenate, but this action is likewise decreased or prevented by lime. Field observations have tended to show that calcium arsenates are not sufficiently stable to permit their use on tender foliage, and in some sections (as noted in Canada), the material is not a safe insecticide for use alone on apples. Its chemical compatibility with lime-sulphur solution is an important point in its favor. Its toxicity to insects compares favorably with that of lead arsenate. Its physical properties are above criticism, being equal to or superior to those of most arsenicals. The less cost and somewhat greater poison content of calcium arsenate as compared with that of lead arsenate has made a strong appeal to the grower in these days of high prices for all commodities, but perhaps has been unduly emphasized in view of the somewhat greater risk of foliage injury attending its use.

It may be that this remedy will establish for itself a place of limited usefulness in certain combination sprays, but never as a general stomach poison unless greatly improved. On the whole, it would seem that the use of calcium arsenate would be a step backward in the art of pest control. The uniform caution in the literature "to use lime" and "not to spray peaches, plums or other tender foliage," reminds one too strongly of the style of the literature during the period when Paris green was "fashionable" in the orchard.

Iron arsenate although non-toxic to the most tender foliage failed to give a satisfactory control of insects even when used in amounts equivalent to twice the arsenical content found effective with better known arsenicals.

Zinc arsenate is fairly effective as a stomach poison but somewhat less so than lead arsenate and has no distinct advantage over the latter.

Magnesium arsenate. A large chemical company introduced and extensively advertised a magnesium arsenate in 1918, said to be composed of 73 per cent magnesium arsenato and 23 per cent inert matter consisting of magnesium hydrate, moisture, etc. The poison content and water-solublo arsenic is declared on the label to be about the same as that of acid lead arsenate.

In the absence of any published laboratory or field study of this youngest

"baby" arsenical, it is placed on the list for experimentation by impartial investigators in order to determine its status among economic poisons. It is recommended for trial only in a small way.

GOOD SEED POTATOES

The average production per acre of potatoes in the United States is very much lower than in Canada, Great Britain and European countries outside of Italy. One of the reasons is that less attention has been given to the character of the seed. The production of high grade seed should be regarded as a special business.

Good strains may be obtained by the tuber unit, hill or mass selection methods through the process of roguing out the diseases and weak hills.

When tubers from diseases or weak plants are planted a similar harvest will be reaped.

Only seed from productive plants should be used.

Careful attention should be given to securing seed that is free from varietal mixture and that is true to type.

Good seed can not be produced unless the growing plants are given good cultural attention.

As a rule the quantity of seed used is not sufficient to produce a maximum crop.

From 15 to 18 bushels of seed should be used per acre instead of 9 to 11, as at the present time.

All seed stock should be disinfected before planting.

Good storage conditions are essential to insure sound, firm seed at planting time.

POTATO GROWERS ORGANIZE

The California Seed Potato Growers bave organized and elected Geo. H. Peters of Bakersfield, president. Mr. Peters has a large acreage six miles scuth of Edison, Kern County, and this coming spring will plant 400 acres of White Rose and British Queen, largely to produce certified seed potatoes. The other officers, all prominent potato growers, are: President, T. H. Lambert, El Monte; secretary-treasurer, J. L. Oleson, Van Nuys. In addition three directors have been appointed: H. H. Hyde, Watsonville E. D. McSweeney, El Monte, and Prof. S. S. Rogers, representing the University of California. Two more directors will be appointed at the meeting at Chico, one from Stockton and one from Sacramento, so that every potato growing district of the state will be represented. A committee was appointed to perfect a local organization, the potato growers department of the Los Angeles County farm bureau, and will meet within a week or two and effect organization.

CUT TOPS OFF GLADIOLUS CORMS

The "Flower Grower" says:

It seems rather strange that the old time practice of leaving an inch or two of the stalf on gladiolus corms when cutting foliage from the corm should survive so long. Even at this late date writers recommend the leaving of more or less of the stalk on the corm.

As we have repeatedly pointed out there is absolutely no reason for leaving any part of the stalk attached to the corm after it is taken out of the ground. Cut it off at once and cut it off close.

WINTER VEGETABLES

The other day the Cultivator vegetable man ventured into a Japanese district which grows a variety of produce for local consumption and city markets. Several crops were being planted in one field, cultivated in another, and harvested in a third, so that the crops are always on the market. In an area of a mile square these vegetables were growing: Beet, cabbage, carrot, cauliflower, kale or Chinese cabbage, lettuce, onion, parsley, parsnip, radish and spinach. These you may grow in your winter garden.

Making plans is the easiest part of farming; carrying them to a successful conclusion is where the work comes in.

Capacity for Work

Its great capacity for work makes the "Caterpillar" Tractor the most dependable and economical tractor for every purpose.

Capacity for work—ability to handle big loads regardless of ground or weather conditions, without mirring, without packing the soil.

Capacity for work—day after day dependability; readiness to work day and night, if necessary; ability to give such service continuously without troubles or delays and with a minimum of expense for operation and up-keep.

"Caterpillar" capacity for work is the combined result of Holt selection and combination of materials, Holt workmanship and particularly of Holt design—developments resulting from more than a quarter century of tractor study and experience.

"Caterpillar" Tractor capacity has been proved scores of times for thousands of farmers everywhere. The War service of the "Caterpillar" Tractor proved it for the entire world.

The "Caterpillar" Tractor was the only tractor used by the Allies for their heaviest war service, selected after severe and prolonged tests. Buy your "Caterpillar" Tractor now. Send for Catalog 407.

DELIVER THE GOODS

Road builders are facing the problem of constructing roads which will sustain not only the heavy traffic of today, but the anticipated increase in traffic which will develop within the next two decades. The use of the motor truck for transportation, now in its infancy, seems likely to become as universal as the use of the passenger motor car; and looming up as it does as the most important element in the future movement of freight, must consequently be considered one of the principal governing factors in the design of modern highways.

These conditions exist in all the states, and far-seeing highway officials are undertaking to cope with the problem of building highways which will have the stamina to join with the heavy truck in "delivering the goods" of tomorrow.

The anticipated increase in truck traffic is responsible also for the construction of wider roads than would have been necessary if only ordinary team and automobile traffic were to be carried. On those routes where two lines of traffic can reasonably be expected an additional width of at least two feet is demanded, with a proportionate increase in cost. Should congested mixed traffic develop even greater widths may be demanded, and the widening of many of the main trunk line roads in the future will not improbably become necessary.

Household Department

THANKSGIVING DAY

Ah, on Thanksgiving Day, when from East and from West,
From North and from South, come the pilgrim and guest,
When the gray-haired New Englander sees round his board
The old broken links of affection restored,
When the care wearied man seeks his mother once more,
And the worn matron smiles where the girl smiled before,
What moistens the lip and what brightens the eye?
What calls back the past like the rich pumpkin pie?
O, fruit loved of boyhood!—the old days recalling,
When wood grapes were purpling and brown nuts were falling!
When wild ugly faces we carved in its skin,
Glaring out through the dark with a candle within!
When we laughed round the corn heap, with hearts all in tune,
Our chair a broad pumpkin—our lantern the moon,
Telling tales of the fairy who traveled like steam,
In a pumpkin shell coach, with two rats for her team.

—J. G. Whittier.

OUR THANKSGIVING

By Mrs. J. R. Kelley, Los Angeles

Dear Sister: Another Thanksgiving Day has come and gone. It was such a bright beautiful day that it seemed impossible to be anything but happy. The whole week has been so full that I am glad to have it over again in writing about it to you.

All the children were home as usual and we are a houseful now, I can tell you, 16 counting the new granddaughter, and she should be counted for wasn't she the center of attractioon all day!

I was up bright and early Monday morning and had the washing on the line by 9 o'clock and got the ironing done in the afternoon. Tuesday I made pie crust, carrot pudding and salad dressing. If you have never made carrot pudding you must try it. I will enclose recipe. In the afternoon I dressed the turkeys. They were birds to be proud of. Wednesday morning early Mrs. Field, who lives on the next ranch down the road came in. She said they were all going out to Thanksgiving dinner so she came over hoping to help me. We worked together like a well matched team. We made cranberry sauce, boiled sweet potatoes, cooked tomatoes for soup, made cottage cheese for salad and then made taffy apples for the little ones and sugared walnuts for all.

Having done all we could in the kitchen, we set the table. The centerpiece was a hollowed out pumpkin filled with fruit. We scattered autumn leaves over the cloth.

Thanksgiving morning found me busy as a bee getting the last minute things done. By the time the children arrived everything was shipshape.

The dinner went off just fine and altogether it was a lovely day.

Menu

Cream of tomato soup
Turkey
Mashed potatoes
Candied sweet potatoes, pickles, rolls
Creamed onions
Cranberry sauce
Pimento cheese salad
Pumpkin pie, Carrot pudding, sweet sauce
Coffee

We are looking forward to spending Christmas with you.

Love to you all. I remain as ever your loving sister, Mary.

Carrot Pudding

Two cups brown sugar, one cup grated raw apple, one cup grated raw carrot, one cup grated raw potato, one-half cup suet, one cup grated bread, one and one-half teaspoons soda, one-fourth teaspoon salt, one cup flour, spices, raisins.

A THANKSGIVING LETTER

By Minnie C. Childs, Tustin

Dear Betty: I am going to have a half dozen friends who have no kinfolks out here to eat tutrkey, Thanksgiving, and I want you to come and help to brighten the day.

I have so many blessings to be thankful for, but above all I place health and a heart content. Such wonderful flowers and sunshine as only California can produce are with us, and the country is beautiful now.

Well, I will tell you about my color scheme and dinner, so you will not be disappointed. Nothing elaborate, you know—home cooked food and home made decorations.

A long low center piece of yellow roses, small yellow paper baskets filled with sugared walnuts at each place. Oh, of course I shall use my best china and silver, and there will be plenty of good cheer but no frills.

Here is my menu:

Celery soup, Salted wafers, olives
Turkey with stuffing, gravy
Mashed potatoes, sweet potatoes
Mashed turnips
Nut and apple salad
Buttered dinner rolls
Pumpkin pie, cheese
Apples, oranges, figs, raisins
Sugared walnuts
Coffee

I was going to make some fudge, but will you believe it, Betty dear, the grocers will sell only two pounds of sugar to a customer, so no candy.

After dinner we will cast dull care to the winds and enjoy a ride to the beach.

Perhaps you remember mother's delicious dinner rolls; well, I am going to make plenty.

Here is the recipe just as mother made them:

Dinner Rolls

Two cups sweet milk, two tablespoons butter or lard, one square compressed yeast, one heaping teaspoon salt, two tablespoons sugar.

Put sugar, salt and shortening in milk, warming it to melt shortening, cool. Dissolve yeast in a little warm water and add to milk. Use flour to make a stiff sponge. Beat sponge for several minutes. Cover and set to rise. When light knead until very elastic and fine grained, taking care to keep the dough soft as can be handled. Cover until light, knead very little and roll on molding board; roll out, and cut with round cutter. Dip one edge in melted butter and fold over. Let rise again and bake in hot oven. If rolls are wanted for dinner at noon let the sponge be set over night. If for the evening, set sponge in the morning.

This recipe has been a prize winner wherever used. Try it.

Come early, Betty dear. As always, Minnie.

Nut Roast

One cup toasted bread crumbs, one cup nut meats chopped, one egg, one small onion, one teaspoon salt, two cups hot water. Mix dry ingredients, then add water or milk, lastly well beaten eggs. Turn into well greased pan and bake in moderate oven 30 minutes.

THE HOME THANKSGIVING

By Mrs. A. C. Pickett, Riverside

Even President Wilson's pocketbook will be severely taxed if he gives away the customary number of turkeys this year. Chicken is not cheap, but roasted in exactly the same way as turkey it often tastes better.

If we are on sugar rations we may have to doctor our cranberries with soda, but have them we must to give the correct color to the feast. We can make fine pumpkin pies without eggs and even camouflage green tomatoes into mince meat.

However, some of these subterfuges remind me of the beggar's stone soup in Aesop's Fables. With turkey or chicken, mashed Irish, baked sweet potatoes, cabbage salad, maybe olives or pickles, celery, white bread, Boston brown bread, pies, nuts and raisins, we have spelled genuine Thanksgiving atmosphere. Appetites will be satisfied without the added dishes which have multiplied with the years until some weary mothers dread the day, and the stuffed family has no disposition to be thankful after a many course banquet.

For many years it was our custom to have all the relatives who could come gather at one of the homes on Thanksgiving. Some lonesome or homeless guest was often included. To make the task less arduous for the

hostess the work was divided. One brought the turkey, another the pies, etc. Some set and decorated the long table ,and all made quick work of the "clearing up" and dish washing.

Our dinners were served not often later than 1 o'clock. We did not want to wait until the children were famished, then uncomfortable and cross from a surfeit of good things. If the guests chose to linger for the evening they expected nothing to eat requiring a set table or dishes. Apples, popcorn, doughnuts or a foraging trip to the pantry were permissible.

Many of our group are scattered now, many gone from our earthly sight forever, but the memory of happy Thanksgiving days from my early childhood up remains a precious legacy. It is the habit with some families to take their Thanksgiving dinners at a hotel or cafeteria. It saves work but not expense, and I doubt if the memories in these cases will have the same flavor as those of the simple, old fashioned home dinners. For these I plead. A happy childhood and youth is one indestructible treasure we should make every effort possible to bequeath to our children.

A THANKSGIVING MENU

By Linda W. McNeil

Tomato cream soup, wafers
Roast chicken, dressing and gravy
Mashed white potatoes
Glazed sweet potatoes
Crabapple pickles Grape jelly
Pumpkin pie Cheese
Fruit pudding, caramel sauce
Apples Walnuts
Coffee

While this menu is planned for farming people and its aim is to utilize home grown products, so reducing the cost to its lowest terms, it is quite tasty and good enough for any family, city or country. Turkey may be substituted for chicken if one has them or cares to go to the expense, but the chicken is quite as good and what is lost in name is made up in cost.

Dressing

This is the most satisfactory manner of making dressing I have ever tried:

Slice the bread and dry on pans in the oven. When crisp, but not brown, put through the food grinder. At the same time add onion and whatever seasoning you use and grind together. This mixes it evenly. Add cold water to make of the proper consistency and plenty of any clean, sweet fat or dripping. If the chicken is very fat, try out the internal fat and use for the dressing. Stir with a fork. If handled properly you will have a soft, crumbly, delicious dish and not the pasty, soggy mass which so often passes under the name of dressing.

THANKSGIVING DAY AND DINNER

By Gertrude Coble, Ripon

First of all let me tell you that our Thanksgiving dinner this year is to be a sort of community affair, that is, three families living close together are pooling their raw materials and we three mothers intend to turn them into eats (as the children are saying) for the dinner. The pies, etc., which can be fixed the day before we plan to make at our own homes, but the turkey and other things which must be cooked Thanksgiving morning will be cooked in the big range at the home where the dinner will be eaten.

The children have planned several unique games for young and old to take place both before and after the dinner and have promised to have the chrysanthemums for our decorations all ready the night before.

Our menu is as follows:
Fruit salad
Roast turkey, sage and onion dressing
Corn, String Beans, Peas
Milk gravy, White bread
Celery, Cranberry jelly, Pickles
Pumpkin pie, Coffee, Nut cake
Apple sherbet

Then in addition we intend to have a big dish of apples, nuts and candy.

Fruit Salad

To make the salad take an equal amount of apples and celery chopped fine, one-fourth as much chopped banana and nut meats, mix together and top with mayonnaise dressing.

Apple Sherbet

For the apple sherbet we take six large apples, peel, core and slice. To them add one cup of sugar, a stick of cinnamon and the grated rind and juice of half a lemon. When tender remove cinnamon stick and press apples through colander. When cool add two eggs beaten stiff, two cups of rich sweet milk, a half a cup of sugar and freeze slowly.

MY IDEAL THANKSGIVING

By Mrs. L. E. Carlton

I would go to church in the morninging, perhaps a tradition or habit, but I love the Thanksgiving service; it takes me back in memory to mother and home. Then I would invite a friend or two who would have no place to go for dinner and would otherwise be lonely. As we live moderately and have no servants I could not care for more.

I would serve a fat roast rabbit or hen of our own raising, as turkeys are a luxury in these days of high cost of living.

In the afternoon I would take these friends for a drive in the back country where nature reigns supreme, where the noise of the city cannot be heard, where God seems nearer. This is my ideal Thanksgiving day.

FOR THANKSGIVING AND THE DAY AFTER

After a nice plump turkey has been dressed, salt and let remain over night. Next morning place in a hot oven, pour on a pint of boiling water and baste often when necessary. Bake from three to four hours. For the dressing use one quart of light bread and cracker crumbs, one egg, beaten; one tablespoon of butter, one teaspoon of sage; season with pepper and salt. Moisten with turkey broth, place in a buttered dish and brown lightly. Serve with celery and cranberry sauce.

Turkey Croquettes: To a pint of minced turkey add one-fourth cup of bread crumbs, two eggs and sufficient gravy to moisten all. Season to taste and make into little croquettes, dip into beaten egg and then in cracker crumbs and fry a delicate brown.

Turkey Casserole: Cook one cupful of rice in plenty of slightly salted boiling water until tender, then drain in a colander and line the bottom and sides of a three pint mold with it, reserving sufficient to cover the top.

How You Dread Wash Day!

WE are talking to you, Mrs. Farmer. And we want to help you. You have the meals to get for the men folks on wash day the same as every other day—and there are the children to be looked after as usual, as well as your regular housework and chores. Even without these added tasks, the family wash is usually enough to break any woman's back and to wear her out generally. Working in the fields and around farm machinery makes dirty clothes — as you well know.

An **International Kerosene Engine** — 1½-h. p. size — will take the hard work and backache out of the family wash for you as well as removing all of the dirt just as efficiently as you could do it yourself. You need a power washer and one of these little engines just as much as your husband needs a mower or grain binder. He doesn't cut the hay and grain with a sickle or scythe — modern machinery has taken the hard work and backache out of these tasks for him. So you are certainly entitled to an engine and power washer to do as much for you.

And between times the engine will churn the butter, turn the cream separator, shell corn for the chickens, turn the grindstone, pump water, saw wood and handle other chores, saving work for the whole family. Write for a descriptive catalogue so that you can show your husband just the engine you want. There are three sizes — 1½, 3, and 6-h. p.

CATALOGUE NOTICE

Send 10 cents in silver or stamps for our Up-to-Date FALL AND WINTER 1919-1920 CATALOGUE, containing 550 designs of Ladies' Misses' and Children's Patterns, a CONCISE AND COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH

How to Order Patterns

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest Chicago styles, all pattern orders are filled in Chicago. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

PATTERN DEPARTMENT
California Cultivator
Los Angeles.

Chop fine one pint of cold turkey and season it to taste, then add a pinch of thyme, one tablespoonful of finely minced onion, one well beaten egg and one cupful of fine bread crumbs. Add sufficient gravy to moisten and press it in the center of the mold. Spread the remainder of the rice over the top and steam for one hour. Turn out carefully on a heated dish and serve with tomato or oyster sauce.

Potted Turkey: Free the remains of a cooked turkey from the skin, bone and sinew and put one pound in a mortar with one-half pound of cold boiled tongue. Pound the whole to a smooth paste, adding a generous lump of butter, with one-half teaspoonful each of powdered mace, salt and pepper and a pinch of cinnamon. When it is quite smooth and well mixed press it into small pots, cover with clarified butter and store in a dry, cool place.

THIS WEEK'S PATTERNS

Style 3060 is an exceptionally practical one for separate coat of jersey cloth. The cut of the back is new and exceedingly good for giving the straight back line so much desired. The hat shown on this figure is the most popular of this season's styles.

The dress pattern at lower right hand corner shows a becoming collar which is again in style and is shown in many of the expensive and exquisite Paris models. Of course it has to be cut right and fitted right and wired right to be right.

The little girl's dress in 3057 shows the simple and very much used trimming of two or three lines of heavy silk or wool. The yarn or thread is simply run through the material with long even stitches with shorter intervals. Handwork is in greater favor than ever and it is all of the quick and easy kind that is very effective and lasts as long as the garment which it adorns. The work dress 2655 is eminently satisfactory in cotton or wool. With the addition of a fresh white collar it becomes a dainty afternoon dress. The apron opposite is exceptionally good.

O loving Source of all,
We on thy great name call
And give thee thanks.
With grateful hearts we raise
Our joyful song of praise.
Thou who hast blest our days,
We give thee thanks.
Lord of the sun and rain,
Lord of the fruit and grain,
We give thee thanks.
For thy rich harvests stored,
For plenty on each board,
For all thy bounties, Lord,
We give thee thanks.
For life and strength and health.
Best of all earthly wealth,
We give thee thanks.
For these our friends so dear,
Gathered from far and near
This feast day of the year,
We give thee thanks.

CONTEST PRIZE WINNERS

There are three instead of two prize winners. The Cultivator has taken the liberty of dividing the $2 first prize and making three awards. It was impossible to single out a best one among these three. The winners are:

Linda McNeil, $1 cash; Mrs. J. R. Kelley, $1 cash; Minnie C. Child, $1 cash; others whose leters are published, one year's subscription to California Cultivator.

CHRISTMAS STORY CONTEST

This will be for the younger readers of the household page, the boys and girls 16 and younger. What part of Christmas do you like best, that is really and truly the jolliest and happiest? Is it helping cut the tree and string popcorn and make candy and put the tinsel on the tree? Is it counting over the pennies and nickles and dimes you have been saving up for months and months and planning what you will get for mother and father and Jack and baby? Is it the Sunday school Christmas tree? Is it Christmas morning when you find your stocking full of wonderful things?

Continued on Page 709.

YOUR party, dance, social or club session calls for refreshments—and there's one unfailingly successful beverage—Ghirardelli's. Creamy, delicious, fragrant—it's an instant favorite with or without cakes or sandwiches. Better than all, Ghirardelli's is made in a jiffy!

Never sold in bulk—but in cans only.

No. 2 Wheat or Wheat and Choice Tame Oat hay	21.00@24.00
Other Tame Oat hay	18.00@21.00
Wild Oat hay	17.00@20.00
Barley hay	17.00@21.00
Alfalfa hay	19.00@24.00
Stock hay	14.00@17.00

Citrus Markets

Los Angeles, November 19, 1919.

Valencias are lower. Some spectacular sales are still made, but the quality of the general run of shipments is lowering and some days' prices have taken a material tumble. There are still some 1,300 or 1,400 cars to go. Navels are already going from Northern markets at a rate of five or six cars a day. Florida fruit is not of highest quality and a slight reduction in estimates of output is now made. The total from that state will be about 11,000,000 boxes.

Lemons in sight at Eastern markets are not far from 40,000 boxes. Demand for California's good.

Shipments

Shipment of oranges from Southern California to date since November 1, 1919: Oranges, 1,263 cars; lemons, 215; total, 1,478. To same date last season: Oranges, 26; lemons, 420; total, 446. Central California: Oranges, 48; lemons, 41; total, 89; To same date last season: Oranges, 143; lemons, 80; total, 223. Northern California: Oranges, 13 cars. To same date last season: Oranges, 8.

Boston: 13 or., 2 lem. Val., 3.00@6.75; lem., 4.05@5.65.

SAN DIEGO POULTRY ASSOCIATION

This organization, though in existence but three years, has made most rapid strides. It started in a small way, without expectation of becoming immediately strong, but it is now recognized as one of the most successful associations in the south end of the state. A capitalization of $50,000 has been authorized and the business has already developed beyond the capacity of the present plant. The officers are now negotiating for a tract of land belonging to the city, on a long term lease. The association now operates a warehouse and mill, in which is manufactured 200 tons of poultry mash per month. A total volume of about 500 tons of feed per month is handled. The phenomenal growth which the association has made is conclusive evidence of the valuable services it has rendered the poultry industry in San Diego

County. The present officers are: President, Edward M. Burnell; vice president, J. A. Butts; secretary-treasurer and manager, G. C. Keeney.

FRUIT GROWERS' CONVENTION

Continued from Page 689.

A seven mile auto trip was given the delegates by Chico people, the day's program being continued on the state land settlement farm at Durham. Judge Peter J. Shields called the convention to order.

Never since the dawn of history have there been such educational opportunities nor such permanent aid extended for human welfare as today. Could people of the East see the opportunities which exist in California with her agricultural outlook, her schools, homes, and social conditions there would not be sufficient standing room for those who would come.

Dr. Elwood Mead was introduced as teaching more than any other the true lessons of California's possibilities. Dr. Mead extended welcome in behalf of the settlers and referred to the fact that two years ago Durham was only a crossroads in which none were interested but today is visited by people of other states and nations as are but few sections in California. This because of the lessons it is teaching.

John P. Irish eulogized the Japanese. He said he realized the audience present was not in sympathy with his utterances.

The central thought in the last address of the convention by Dean Van Norman was that the laborer of today becomes the land owner of tomorrow, and he gave most serious and eloquent appeal to the young men of California to fit themselves to perform farm labor and to possess the land which had been given to their fathers and urged that it be not passed on to the alien.

Then came the resolutions.

A rising vote of thanks was tendered the people of Chico, of Oroville and of all Butte County for their hospitality.

"Whereas, California agriculture in great measure does now and must forever depend upon irrigation for best results, and we view with alarm the effort on the part of great public service corporations at times to utilize for power purposes an increasing proportion of the waters of the state, to the great disadvantage of agriculture; therefore, be it resolved, that, in the direct interest of 1,000,000 Californians dependent upon farming, and in the indirect interest of all, we insist that the right of agriculture to the use of water, whether stream flow or stored, shall be recognized and confirmed as superior to the right to use water for power, and to this end we instruct the legislative committee to watch all developments in order that such rights of agriculture shall be protected."

The state highway commission was asked to abate weed infestation which comes from highways bordered with some of our worst seed pests. In the words of the resolutions committee: "The state law for weed control must be considered by the state highway commission who may by force of example lead in upholding this law and thus make it easier for our county horticultural commissioners to enforce it on individual property."

Regret was expressed that Governor Stephens could not be present and thanks and appreciation for his telegram promising utmost protection for the agricultural industry.

Thanks were also extended to officials and the government of South Africa because of courtesies extended to Dr. Lounsbury in his search for beneficial insects.

Regarding the relations between nurserymen and orchardists: "Recognizing as we do that losses suffered by nurserymen from overproduction of nursery stock must at last be paid by fruit growers in increased cost of trees, therefore, be it resolved, that we pledge ourselves so far as we are able, through our various organizations, to make available to the nurserymen the knowledge of our needs for trees, as far as possible, in advance of planting, in order that the immense waste prevailing in previous years may be avoided."

"Whereas, this convention recognizes that the present salaries of the horticultural commissioners and of horticultural inspectors are wholly insufficient to maintain efficient officers in these important positions, therefore, be it resolved, that the legislative committee be instructed to endeavor to secure a reasonable increase of such salaries at the earliest possible date, since the work in each of these lines is suffering very seriously from such inadequate compensation."

"Resolved, that the legislation committee of the cooperative and other producers of California be requested by this convention to consider the necessity of the University of California establishing on an adequate scale a fruit by-products laboratory and experimental demonstration plant.

"We sugest that the committee, at a suitable time, take the matter up with Dr. Whitten, Dean Hunt and the board of regents."

It was resolved that experimental plants now under direction of pomologists in charge of viticultural investigations should be continued in California, "That we particularly request the purchase of two of the most important of these experimental plats, viz., the one situated at Fresno and the one at Oakville, Napa County, both of which are located in the heart of important grape producing areas, and we understand the leases covering these plats will soon expire. Work of a most important nature is already under way with the end in view of aiding our grape growers and this will be entirely lost unless these properties are purchased outright and properly equipped for the prosecution of this work under the most favorable and effective conditions."

CONVENTION NOTES

President Copeland and Secretary Durkee of the Chico Chamber of Commerce, were persistent workers for the comfort of the convention attendants. Chico was full but no one had to sleep in the park.

The three ring feature of the convention that held session last week in Chico, Oroville and Durham, gave variety and added to the interest.

Oroville entertained royally. It seemed as if all the autos in the town were in service and at command of visitors. Messrs Hornung, Meek, Ehmann and all the rest said: "What do you want? Name it and it's yours."

Oroville olives! Hornung's barrel is not so full as it was for those big ripe Missions sacrificed themselves to glorify Oroville.

jujubes by serving visitors at the delicious. Mrs. Beagle preached the gospel of more general planting of jujjubes by serving visitors at the gardens with the candied fruit.

City of Oaks and Maples has fall coloring like unto back East and the school children kicked up the leaves of red and gold much as did the kiddies of years ago back in New England or on the old Western Reserve.

The efficiency of organization was apparent in the work of Mr. Hecke's workers. Convention plans worked out according to program and Messrs. Taylor, Hoyt, Jacobsen, Smith, Strong and Reynolds aided at every opportunity.

The Normal School people under direction of Prof. C. M. Osenbaugh, gave cordial welcome and provided a most acceptable meeting place. The auditorium has splendid acoustic properties.

The report of the engineers of the Iron Canyon project, in effect that instead of bedrock they had found a bed of sand which might prevent the construction of the dam for the great storage reservior, caused a depression which all the other happy events of the week could not entirely dispel. The engineers still hope for some way of construction which will be safe. The possibilities of this natural reservoir site are so great that every effort will be put forth to overcome all obstacles.

The Japanese question was taboo so far as resolutions were concerned. Too bad!

Byron O. Clark, B. F. Walton, C. M. Burkett, John P. Irish and others of the old timers reminded of state conventions of a score or more of years ago.

Sypher's orchestra and other musicians added much to the pleasure of convention week. One of the most enjoyable features was several solos rendered by Arthur Winters. When it comes to pep and music with the punch the Sacramento chamber of commerce qquartet was especially fine and took off the honors on banquet evening.

The Durham Land Settlement furnished machines of the settlers and several came from Chico to give every convention attendants a trip amongst the settlement farms.

The possibilities from conservation were graphically shown by a mammoth relief map of the Great Central Valley located in the hallway of the normal building and explained in detail by Van Bernard, president of the Fourteen Counties Protective Association. The slogan of the association is "Hereafter we stick together." And the members are making good, which enables the officers to hold a line on legislation, especially to the end that homes and holdings are protected from flood waters.

Since apple growing began in the United States there have been no such prices as the fruit is commanding this year. The production will be near 24,000,000 barrels.

PUENTE, THE WALNUT CITY

That's the name they have given to their town, and it must be conceded that they have a right to it. On Tuesday, November 11, Puente celebrated Armistice Day with a big parade, nearly a mile in length, featuring very heavily the agricultural crops of the district. Even Covina sent a truck loaded with 50 boxes of Valencia oranges, also a half dozen decorated autos. A large tent housed a chicken and goat show and under a mammoth tent was an auto and tractor exhibit that proved the main attraction. The attendance was said to have exceeded 15,000 and 4,400 pounds of boned meat had been barbecued to feed the hungry hordes, and it was all eaten. A street dance closed the Walnut City's "grandest day.'

CHRISTMAS STORY CONTEST

Continued from Page 707.

Is it the Christmas dinner with grandfather and grandmother and the cousins coming for all day? Is it the walk or the ride or the games afterward? Whatever it is that you, your own self, like best about Christmas, tell the rest of us in a letter of not more than 300 words and send it to Household Department, California Cultivator, Los Angeles, by Saturday, November 29. That just leaves a week to write it in, so put on your very best thinking cap right away.

The letters will be published in the household department on Saturday, December 13, so there will be plenty of time to plan on what you are going to do with the prize you win. Usually the Cultivator does not send the prizes till the first of the month following the publishing of articles, but this time is an exception for of course you want to use the prizes for Christmas.

Prize Offer

For best letter, $2 cash; for second best, $1; for all published, one year's subscription to California Cultivator—and you know that would cost just $1 and will make the finest kind of present for father or your teacher or some boy or girl who has joined a pig club.

Write on one side of paper, not more than 300 words, sign name and address and name and address of the one to whom you wish subscription given if you win a subscription prize.

COUNTY HORTICULTURAL COMMISSIONERS

Continued from Page 684.

Fred Brosius, Sacramento, secretary.

Attorney R. W. Harrison, assistant to Attorney General Webb, answered legal questions which were presented by commissioners. They touched all points from the legal rights of the most debased of bugs to those of the consumer of a box of apples.

The employes of the Fallbrook Growers' Association held their annual dinner at the cannery on Thursday, November 13. There was a large gathering and a very pleasant evening was spent.

NORTHWEST SHORTHORN SALES

Col. H. C. Crancke, of Nez Perce, Idaho, one of the well known auctioneers of that section, reports a keen demand for pure bred beef cattle in the Northwest. Col. Crancke writes that 55 head in the Schildewan & Hawley sale averaged $355; Nate Holmes, Buhl, Idaho, sold 45 head for an averaged of $307; C. A. McMasters, Twin Falls, Idaho, sold 55 head for over $547 each; W. G. Cordiner, Walla Walla, Washington, sold 40 head for $641, said to be record price for Washington. Forty head of Herefords in a British Columbia sale averaged $325.

INTERNATIONAL GRAIN SHOW

The International Stock, Grain and Hay Show will be held at Chicago November 29 to December 6.

"Better than the best incubator cellar"

So writes John Forney, Kingsburg, a user of Charters Incubator.

"Even during the last three days—when the temperature is in danger of running up—the Charters Regulator keeps the heat exactly right—no matter what the weather outside." Says Mr. Forney: "Its action is almost human. I wish again to thank you for your

CHARTERS REGULATOR"

(Readily attached to your Incubator. Part of the equipment of Charters Incubator.)

How they work:

It's the thermostats that do the the trick—actually anticipating any outside change of temperature—thus automatically adjusting the size of the lamp flame to meet the new condition, and keep the egg chamber the same, no matter what the weather. The outside atmosphere may vary 70 degrees, yet the egg chamber will change less than half a degree. The mechanism is entirely unlike the unsuccessful "sleeve" type of regulator. The big tank holds a supply capable of running the lamp 2 to 3 weeks. This means only one refill and trimming a week.

No more fear that the flame will run too low or too high, if neglected, and so endanger the hatch. No more getting up in the night to see if the lamps are all right. No more filling and trimming the lamp every day.

George Ellison of the Mission Hatchery, Campbell, installed Charters Regulators on every one of his machines (over a hundred)—and writes us that he finds they save him much time, and fuel and that "change had been well repaid."

Enoch Crews of Seabright Hatcheries, says: "I would never run off another hatch without your Regulators and Incubators complete." And backs up his endorsement with an order for 50 new machines, to add to the ones now in use.

Write today for free catalogue—or better still—place your order now for your Charters Incubators, or Regulator, so we can deliver in time for the Fall hatch. The Regulator is $10. The Incubator (with Regulator attached) is $65.00. They have saved money for others. If they do not serve you as well—your money back.

See The Charters at principal fairs and poultry shows this year.

The November Slacker

By Jean A. Koethen

THERE are two classes of hens that cannot be expected to lay in November. These are the late molters and the immature pullets. Late molters may be classified again as old hens and yearlings. By old hens I mean hens over two years of age. The number of eggs to be gotten from these hens in the fall is problematical at the best and depends largely on individual characteristics. Hens of the heavy breeds, Rocks, Orpingtons and Brahmas, cannot be depended on for fall work after they are two years old, though some of them may be profitable two years longer than this. The Oregon station has succeeded in breeding Barred Rocks that were valuable for four years, but the amateur is rarely so fortunate. Unless they are fed very carefully both Barred Rocks and Orpingtons incline to put on fat after they are two years old, and this tendency is not easily controlled.

Old hens usually molt a little later than young ones, and so November frequently finds them just getting into their fall suits. It also finds the best of the yearlings out of condition, for they have laid up to the last possible minute before beginning to shed their feathers. It would be unjust and unappreciative to insist that a hen that has laid from November to November must go on till Christmas or be voted a slacker.

The yearling hen that began to molt in August ought to be back on the job by the middle of November. If she is not, either she is a plain slacker and must be dealt with accordingly, or else she has not had the feeding and care that encourage laying.

Burden on the Early Pullet

By the process of elimination we have found that the burden of providing November eggs rests on the pullets, but we must eliminate even part of these. The pullet that has not had time to mature is never a dependable fall layer. She may lay a few scattering eggs, and she may deliberately postpone laying at all till January. Leghorns and other Mediterraneans hatched before the first of May and hens of the heavy breeds hatched before the middle of March can usually be depended on to produce eggs in November, unless they molt. Pullets hatched later than these dates are not dependable. My experience is that Buff Orpingtons rarely fail to lay between the end of the sixth and the beginning of the seventh month. Birds hatched as late as the first of April are often, in fact nearly always, in full lay before November. Rhode Island Reds, although of considerably less weight, do no better. I doubt if one can count on them under eight months. Light Brahmas, while there are exceptions, cannot be counted on to lay under ten months, and Cornish require a year. All the American breeds are rather slow in getting under way, and no dual purpose hen, except the Orpington, can be counted on to do much laying before she is eight months old. Knowing this, we are forced to hatch early or go without fall eggs. It all simmers down to this, that the dual purpose pullet hatched later than the first week in March is not a dependable fall layer. All immature pullets, that is, Leghorns under six months and dual purpose breeds under eight months, must be eliminated when we are looking for slackers. Edward Brown, the English authority, says:

"It ought to be the ideal in the minds of all poultry keepers to have each individual pullet laying by November 1, which can be accomplished provided the birds are hatched early enough and at the same time reared in a proper manner. It is impossible in this connection to lay down any hard and fast rule, because a great deal depends upon the nature of the breed kept, the class of soil and the method of rearing. Upon heavy soils chickens do not grow so quickly as upon the lighter lands, and the same is true as to the more exposed and colder parts of the country."

Only Two Slackers

When we get down to the facts in the case we find that there are but two real November slackers, the pullet that is old enough to lay but does not lay, and the yearling hen that has finished molting but does not get back to work. Statistics compiled by various experiment stations have shown that the pullet that does not begin to lay promptly and lay a fair number of eggs the first three months will always lay behind her more energetic sisters. In the 12 months' laying competition of the Utility Poultry Club, an English organization, in which were 600 competing birds, it was found that birds which laid ten or more eggs in the first four weeks (October 15 to November 12) averaged 187 eggs during the year; that birds which laid at all the first four weeks averaged 167 eggs in the year; that birds which did not lay in the first four weeks but did lay in the first eight weeks averaged 161 eggs; and that birds which did not lay during the first three months averaged but 106 eggs. At a similar competition in Cork eight hens which produced an average of 57 eggs in the first three months averaged 206 eggs in the year; eight hens which produced an average of 20 eggs in first three months averaged 96 eggs in the year; and eight hens which averaged only 1.25 eggs in the first three months averaged only 48 eggs in the year. At the fourth annual international egg laying contest at Storrs, Connecticut, the ten Wyandottes which made the best average for the year averaged 4.9 eggs in November, 8.7 in December, and a fraction over 12 in January and February. The White Leghorns averaged 5.7 in November, but were more influenced by the cold weather in January. Examples might be duplicated indefinitely showing that the most profitable layers begin laying in November or earlier. The pullet that defers laying until January in spite of careful feeding should be culled out and sent to market.

Study Environment and Feeding

Failure to lay when eggs can reasonably be expected is not always the fault of the layer. It may be the fault of feeding or environment. The pullet that is just beginning to lay is more susceptible to poor conditions of housing and environment than a

mature ben, just as a young person is more susceptible than one of mature years. Overcrowding, filthy quarters, lack of ventilation, infestation of mites and lice, all tell on the health and production of a pullet. She should have protection from rain and sun and wind. Pullets allowed to run with cockerels or with the older hens are often teased and annoyed to the detriment of production. Keep them by themselves and see that they are thoroughly comfortable.

The pullet that is dilatory in beginning to lay and the yearling hen that is inclined to be a slacker may often be induced to lay by proper feeding. The dietary of all fowls, young or old, layers or non-layers, should consist of hard grain, ground grain, animal food in some form, green feed, shell, grit and an abundance of pure, fresh water. Omit any one of these and egg production will suffer.

Dry Mash Important

All farmers feed hard grain on the ground or in litter, but many fail to realize the importance of keeping dry mash always before the birds. This system of feeding dry mash in hoppers has superseded the old plan of giving a moist mash in the morning and letting the birds hustle for their living till supper time. The wet mash at some time in the day helps to start the pullets and is fed by many commercial poultrymen the winter through but it does not take the place of a dry mash always accessible. The mash may be one of the many good proprietary mashes that can be bad already mixed or it may be mixed by the farmer or his wife. It may be simple or complex, may contain many ingredients or few, but it is always necessary to satisfactory production because it is the only method of feeding which makes it absolutely certain that every hen shall at all times have all the feed she needs. The grain feeding at night is necessary to the health of the fowls, but it is the mash that produces eggs. In it may be incorporated the ingredients required for egg manufacture, and if only a limited amount of hard grain is given the hens are forced to eat mash or go hungry. A quart a day of hard grain to a dozen fowls was formerly thought necessary, but a quart to 15 or 16 is now deemed sufficient. The more mash a hen can be induced to eat, up to a certain point, tbe more eggs will she lay. Of course, if she is forced to eat mash entirely the digestive organs, which require the exercise of digesting hard grain, will suffer.

When the dry mash is kept before the pullets, a moist mash containing cooked vegetables may be given morning or night or early in the afternoon, but this is more an appetizer than anything else, and only what the birds will clean up in a short time should be given. When a good mash is fed it does not matter so much just what hard grain is given, provided there is some variety.

In Edward Brown's recent book on Poultry Husbandry a very good dry mash formula is given which is not essentially different from tbose fed in this country. In fact it is more simple than some of them. It consists of three parts corn meal, one part bean meal, three parts barley meal or ground barley, two parts bran, one part clover meal, for wbich we can easily substitute alfalfa meal, and three-eighths part beef scrap or meat meal. The laying ration at our own university farm is very similar: five pounds each of bran shorts and ground barley, three pounds meat scrap, two pounds soy bean meal, with a little salt and charcoal added. The meat is an extremely important part of the mash and should never be omitted unless milk in some form is fed. It is the animal food that makes eggs, the green feed that conserves health, and the grain that maintains bodily heat and energy. Without all three there can be no sustained production.

SHE HAD HIM

Husband and wife were having words, when he said: "I don't believe in parading my virtues!"

"No?" answered the wife. "Do you think you could dear? It takes a number, you know, to make a parade."

Poultry Queries

Conducted by J. A. Koethen

Pullets Moulting

I would like to ask you a question about my White Leghorn pullets. Tbey were hatched in March, began laying in September and at first from the eight pullets I would get five and six eggs a day. Lately I only get four a day at most and often two or three or maybe one a day. I find a great many feathers under the perches and wonder if they would moult so young or if I am not feeding them right. I feed table scraps mornings and am careful that they are clean and not too wet. Then they always have the special mash in boxes all the time and at night about a pint of scratcb food (for the eight pullets). I let them out for about an hour before bedtime for a little run under the orange trees. I give them plenty of Swiss chard and lawn clippings. Will you kindly tell me if I am doing the best for them? Their house is new and clean and yard and water dishes always fresh and clean.—Subscriber, Riverside.

March pullets ought not to molt in the fall, except for the slight pullet molt which all pullets go through before they fully settle down to business. There are said to be six of these slight pullet molts, but they are so slight they do not materially affect production. It may be you have fed your pullets a little too well, given them so much egg producing material tbat they began to lay before they were quite mature. Pullets that have been forced in this way often stop laying after a month or so and go into a regular fall molt. At the university farm this is prevented by taking pullets off the laying mash at about four and one-half months of age and keeping tbem on a maintenance ration of bran and beef scrap, 95 per cent bran and five per cent beef scrap. This keeps them from laying too young and gives the frame a chance to develop. If your pullets have really gone into a regular molt, all you can do is to feed them up, giving corn and linseed or oilcake meal in the mash and some sunflower seeds if you have them in order to get them through the molt as quickly as possible. Your ration is excellent. I do not see how birds could fail to lay on it for any other reason.

Hens Not Laying

I have about 30 old hens (Barred Rocks) and 20 young pullets. I feed about a gallon and one-half of a prepared feed hot in mornings and a gallon of wheat and barley mixed, or oats, in the evenings. The hens have range on alfalfa and around the buildings. Some are through molting. I get only one egg every other day. Would you please advise me why I haven't been getting eggs since August?—Subscriber, Gridley.

The feed you mention is a mash and designed to be fed dry in hoppers. There is no harm in mixing some of it into a warm, moist mash for breakfast, but this does not take the place of the dry mash always before the hens. It would be a good plan, since the hens have good range, to cut down the grain feed a little, making it three quarts a day for the 50 hens and pullets and thus compelling them to eat more of the mash. If the young and old birds are in one flock it is quite possible that the old ones, which can hardly be expected to do much laying in the fall, are eating up all the grain from the young ones. Keeping the mash before them will prevent the old hens getting more than their sbare, but it is better to keep the two ages apart, at least until all the pullets have commenced laying. If your hens are more than two years old not much more laying is to be expected of most of them. Barred Rocks as they grow older are very prone to put on fat instead of laying. Better cull out all except those you know are laying. They will make nice Thanksgiving dinners.

Vol. LIII — November 29, 1919 — No. 22

A Butte County Almond Orchard

California has some 50,000 acres planted to almonds. Nearly a third of this is non-bearing acreage, so that the production record thus far is a little above 5,000 tons annually. The output this year is far above that of any preceding year and the returns will be satisfactory. The average yield has been around 750 pounds per acre. Improved methods will increase this. In acreage the banner county of the state is Yolo with 5,500 acres in bearing. Butte, however, is a close second with 4,600 to her credit.

Join the Great Army of Western Farmers Who Are Cutting Ditching Cost 90 Per Cent or More

Let Us Help You Save Time and Money This Year

It is a fact that no man who knows the real merits of the Martin Ditcher will be without this wonderful tool. It does more jobs well than any other farm tool made, and every operation makes a saving in time and labor and makes the owner more money from the land.

Every day the enthusiasm of Martin owners grows. We have in our files thousands of letters like the ones below. Space will permit us to print but a few of them but we shall be glad to mail you more. Read these letters and the facts about the Martin printed on this page. Then send us your name and let us send you the **Book of the Martin.** It will open your eyes to new possibilities in land drainage as well as better irrigation

Is Ditching a Tough Job for You?

Do you put off cleaning ditches as long as you can? Are there a dozen dirt moving jobs you ought to do but which cost you too much money done in the old, laborious way?

Let the Martin solve the whole problem for you. It makes new ditches faster than 100 men with picks and shovels, cleans weed-grown ditches lightning fast. It grades and repairs roads, moves snow, makes dikes, levees and borders, cleans corrals, cuts perfect laterals, does its own plowing as it goes, works on level ground or hillsides and in any kind of soil, wet or dry.

THE Martin O.D.&G.CO. REGISTERED

FARM DITCHER FIELD TERRACER AND GRADER

Read What These Owners Say

Colorado

The MARTIN Ditcher and Grader is all right. I used it on my ranch where the soil is gumbo of the stickiest sort, so much so that it is practically imposible to get a plow, or even spade, to scour in it. The MARTIN scours nicely and it did the work and I am indeed well pleased.—Richard Dillon, Sedalia, Colo.

Wyoming

With the MARTIN Ditcher and Grader I made two miles of new ditch to carry 5 feet of water and finished up the job in considerably shorter time than I could have done in any other way. I also cleaned out five miles of old ditch and did a better, a quicker job than I could possibly have done otherwise.
Malcolm Moncrieff, Big Horn, Wyo.

California

First I tried to buy a second-hand MARTIN and found that the farmers who owned them would not part with them. Then I bought a new one and have put it to many different uses, such as making new ditches, cleaning old ones and constructing ridges in the orchard. On all these jobs it gave perfect satisfaction and I pulled it with my Fordson tractor.—E. A. Frey, Exeter, Calif.

Idaho

I wish to say for the MARTIN Ditcher that it did, in 15 minutes, work that I fully expected to pay a man $5.00 a day for three (3) days to do. I can heartily recommend this machine to any farmer needing a machine for ditching.
E. A. Doud,
Blackfoot, Ida.

Nothing Can Stop the Martin

It goes through the toughest kind of wet, sticky ground or through the dry, hard, sun-baked kind. Makes a clean V-shaped, hard banked ditch down to four feet deep. It is adjustable and can be narrowed to prevent overloading horses or tractor, and is reversible to cut either right or left handed. This enables you to work up close to fences or on hillsides.

For ditch cleaning the Martin is a wonder. Weed-grown ditches stop the free flow of water. Old methods of cleaning take too much time and the work is always put off. In the fall the whole irrigation country is marked with weed-grown ditches. Clean them early, often and fast with the Martin.

Get one of these tools on your ranch or farm now. Try it on your own work and under your own conditions. If it doesn't more than make good for you don't keep it. Ship it back and it will never cost you a cent.

Make more and better ditches. Cut and back-fill tile ditches for drainage. Cut your laterals, clean any kind of ditches, build roads and trails, build contour dikes, do a thousand and one jobs to make the land better and more productive, with a Martin. No tool like it in the world. Made to last a lifetime and cannot get out of order.

Let Us Send the Book of the Martin

with a list of users near you. It is loaded with information that will be valuable to any farmer in the West. Get posted on the latest and most economic way of handling the dirt moving problem. Write a post card or fill out the coupon on this page. Do it today.

The Need for a Department of Farm Marketing

By H. H. Warner

CALIFORNIA farmers are accustomed to being pointed out as of higher average ability than farmers in other parts of the country, and whether or not we deserve this reputation, we are proud of the fact that California has won distinction for itself in progressive methods of marketing farm products through cooperative associations. In this particular line of activity California still ranks first although other states are following and in some cases improving upon the practices in vogue here.

The singular thing, however, which is worthy of the consideration of every thinking farmer, is that our great state university at Berkeley provides such limited opportunities for the study of these problems of marketing wisely the products of the farm. It may be assuming a great deal to attempt to criticize the courses of study in the college of agriculture, but when it becomes apparent that other universities are doing more work along these lines than our own, the matter becomes one of general interest.

The history of the cooperative movement in California is well known. The long distance to the great consuming centers and the occasional wide fluctuations in the price of our perishable commodities during the time of transit were the compelling factors which made the cooperative movement a necessity. The basic principle of cooperative endeavor was instilled into the earliest settlers through the need for using jointly in each community a single source of water supply, and so it was but natural that this principle should be expanded to embrace the selling of farm products. The development of the pooling idea by which the losses were spread and the profits combined followed as a natural course until today we have in successful operation a number of great marketing organizations of growers which distribute their various products through their own national selling organizations. The establishment of uniform grades, the opening up of new markets and the campaigns of national advertising to stimulate the consumption are some of the later steps in the process with which all are familiar.

The management of these great organizations transacting millions of dollars worth of business every year is demanding the services of men highly trained in the intricate methods of distribution and who are at the same time familiar with the difficulties of the growers. Even the local associations affiliated with the central selling organizations are feeling the need today of men who, while being in close touch with the practical operation of the packing house, are at the same time experienced in the selling end of the business and have had some opportunity to see at least the method of distribution of these commodities in the Eastern markets.

In an address before the students in the college of agriculture at Berkeley in 1912, former State Horticultural Commissioner Jeffries emphasized the increasing need for college trained men in the marketing of California farm products. If this was true seven years ago, the need is even greater today, but it must be admitted that the graduates of our college of agriculture are not prepared to enter upon work of this sort because of the lack of courses of study relating to this subject. Other universities, notably Wisconsin, Cornell and the Massachusetts college of agriculture, have for several years offered excellent opportunities for study in this direction, and several others are rapidly undertaking to establish similar courses of study. In entomology, plant pathology, organic chemistry, animal husbandry, dairying, plant breeding and the study of soils, our university offers unusual opportunities for study and investigation, but the one most important factor of all without which the practice of the principles of scientific production are of little avail, that of profitable marketing, is sadly neglected. Of course the student is able to take one or two very general courses along the line of farm economics, but these are generally somewhat theoretical and not well adapted to practical application, although they are important in themselves for the fundamental principles which they present. The field today, however, is so broad and complicated that a man intending to go into this line of work or who wants to further the cooperative idea in his own community should be able to secure a more complete understanding of the marketing problems confronting California farmers than can be obtained from the general courses now taught.

The man who plans to specialize in this work should not only be familiar with the history of the cooperative movement in this and other states and the method of operation of the large selling organizations, but he should be able to learn of the methods of sale and distribution of these products in the Eastern markets. He should be able to elect courses which would teach him the extent and time of movement of the same or competing crops in other sections of the country and the effect which importations have on the disposition of certain California crops. He should be able to learn something of how the local cooperative associations are organized and of the laws affecting their operation.

It is an interesting fact that the work done by the various bureaus of the United States department of agriculture is paralleled by courses in our own university in practically every case except that of the bureau of markets. It is also worthy of note that excepting a book written by G. Harold Powell of the California Fruit Growers' Exchange and one by L. D. Weld, now associated with one of the packers, there are practically no textbooks available for courses in this work. The detailed bulletins of the bureau of markets afford better and more authoritative material for studies along this line than can be found elsewhere. This fact, however, instead of being an obstacle to the offering of such courses at the university, should only show more clearly the need for these studies. In these days of rapidly increasing production and general interest in the prices of foodstuffs from the farms, we need in this state a well equipped branch of our state university, which will bear the same relation to the marketing problems of the California producers that the Harvard school of business administration bears to the manufacturing and merchandising interests of our Eastern states.

The marketing problems of the growers in California are by no means solved. The cooperative associations are facing today a threatened federal investigation urged by a certain well organized body of wholesale grocers. The right of farmers to bargain collectively is being questioned, and if we do not teach the rising generation of farmers the reasons for the maintaining of this principle there is a possibility of their reverting to the days of cut-throat competition between the various speculative interests who are eager to take advantage of such a situation. Other producing areas closer to the large consuming markets are offering keener competition every year, and the problem of stimulating consumption to keep up with the increasing production in all lines is continually with us. The coming generation of farmers in California will have some big problems to solve in connection with the profitable marketing of their products, and it behooves us to see that adequate courses of study are offered along this line in our state university.

Dehydration---Better Fruit---Wider Markets

By A. Layman

FOR the first time in history the world is holding its breath as it contemplates the food situation. There have been famines in isolated sections, but it is almost a trite saying that modern transportation and production methods will ultimately wipe out these local famines.

But is the world producing enough to keep itself from starvation? As yet transportation has not been so fully restored that Eastern Europe is supplied with a sufficiency. Even if it were, has America or other producing sections which have a surplus a great enough surplus to supply all?

Carefully gathered statistics as to foods now on hand, together with estimates of the present year's production, induce most thoughtful consideration of the question. Meantime appeal is made for production to the limit, for conservation as at no other time.

Discussing this question some months ago a writer in the National Geographic Magazine referred to the great wastes in consumption, especially in fresh vegetables, and sometimes even milk and its products, which caused great suffering. To handle these wastes it was suggested that the dehydrating method be employed. The article referred to the ideas of Dr. McCollum as to the life giving principle in leafy products and in milk and all of its products. This principle has been proven essential to the highest production in all life. David Fairchild, the writer referred to in the Geographic, says:

* * *

Two Food Essentials

The human machine is, after all, a simple one in many ways and can take its fuel (energy-yielding food) as well from cheap as from expensive foods, but it runs down quickly. Starches, fats, proteins, minerals and water are the five great food groups for which we are accustomed to planning in our diets; but until recently we have not known about two others which are essential to health. They are called respectively by research men the "fat soluble A" and the "water soluble B."

The "fat soluble A" is present in the fat of milk, the butter fat which forms the cream and butter itself, but, curiously enough, is not present in the vegetable oils nor commonly in the cereals or foods coming from the seeds of plants. It is, however, a characteristic of green vegetables and is particularly abundant in the green leaves of plants.

The "water soluble B," on the other hand, does occur in cereals, particularly in their outer layers, and in green vegetables, as well as in a very large number of other foods.

The South Italian peasants build up their strong, powerful bodies, then, from the proteins and starches of their corn polenta and from their green vegetables. They get their fats from the olive oil, and their "fat soluble A" is taken from the green vegetables. Their "water soluble B" is obtained from both the corn and vegetables, for it is present in both.

The old doctrines of "strength giving foods" must be analyzed from the new standpoint of the presence of

Continued on Page 722.

Agricultural News Notes of the Pacific Coast

Northern California

Yuba County has sold the last of its $810,000 highway bonds.

Japanese hold title to 1,400 acres of the richest land in Placer County.

Yuba County reports storage cannot be provided for the total bean crop.

Oranges from Colusa are now being shipped to hotels in San Francisco.

A paved highway between Chico and Sacramento has just been completed.

There will be much Mariout barley planted in Tehama County this season.

The growing of sugar beets in the Chico, Butte County, section has been abandoned.

A new United States battleship, the California, was launched at San Francisco, November 20.

Seventy tons of almonds were shipped this season from the Rumsey, Yolo County, warehouse.

Coloma, El Dorado County, is shipping a fine apple peculiar to that section, known as the Lady.

An oil company has leased 15,000 acres of land near Clovis, Fresno County, and will prospect for oil.

Grapes from Cloverdale, Mendocino County, sold in New York for $225 a ton and netted the growers $132 a ton.

The farm bureau of Placer County has organized a farmer's home telephone company to own its own phones and wires.

A tract of irrigated land near Dixon, Solano County, containing 5,647 acres, was sold last week and will be at once subdivided.

Air freight service will be established, by two aviators, between Sacramento and Chico, Willows, Corning and Red Bluff.

Guava jam from Hawaii to the extent of 300 cases was recently condemned at San Francisco as unfit for food, and destroyed.

This is the first year car lots of apples have been shipped from the Paradise district of Butte County, 15 carloads going forward.

The United States forest service has made a contract with a lumber company allowing 234,000,000 feet of timber to be cut in Plumas County.

George Shima, the Japanese potato grower of Stockton, heads a corporation of Japanese which has purchased 13,900 acres of land near Prineville, Oregon.

Supervisor C. A. Nelson of San Francisco says thousands of loaves of bread but two days old are shipped to hog ranches while city people are starving.

The California Nursery Company of Niles is suing the California Brick Company for $30,000 damages due to gas from the brick kiln injuring plants and trees.

Shasta County people are so busy that the post office at Shingletown was closed and the supplies shipped to Washington because no one would be postmaster.

Dr. F. M. Coleman, at the convention of the Prune and Apricot Growers at San Francisco, declared "500,000,000 pounds of prunes for California in the next five years."

Rice prices which opened last week at $5.36 per hundred pounds have now passed $5.80 and will reach $6 in the opinion of Secretary Merry of the Pacific Rice Growers Association.

Central California

Dos Palos in Merced County is a cotton and rice center.

On November 7 hogs sold at auction in Fresno for $17.80.

Gilroy, Santa Clara County, had a 1919 prune crop of 8,000 tons.

A $75,000 cannery is being built at Campbell, Santa Clara County.

Stockton potato growers are receiving $3 a sack for their output.

Ten cent milk is no more at Stockton, its last stand. It is now 12 cents.

Sixty per cent of California's apple output comes from the Pajaro Valley.

Lodi shipped 4,028 cars of grapes for which the receipts were $9,161,512.

Tulare County will spend $45,000 for building bridges over Porter slough.

A Madera County rancher paid $30,000 for a Poland China boar at Omaha.

Reports from Porterville show a heavy fatality among turkeys due to coyotes.

The first car of navels from Lindsay, Tulare County, was shipped November 14.

Central California onion growers are getting $4 per hundred for the present year's crop.

The biggest cotton crop in the San Joaquin Valley is at the Tagus ranch, covering 860 acres.

Lindsay orange growers have made a neighborhood canvass to study the serious orange splits.

The total apple shipments from Watsonville, Santa Cruz County, this year were 3,146 cars.

Ripon, San Joaquin County, will have to double its cannery capacity before the next fruit crop.

Of 879,678 pieces of nursery stock shipped into Tulare County last year but 5,456 were condemned.

A truant officer of Kerman, Fresno County, took up 30 children of school age working in cotton fields.

A $100,000 packing plant will be built in Visalia by the California Prune and Apricot Growers Association.

The new state soldier settlement colony in Merced County will be mainly developed for fruit growing.

The main Modesto irrigation canal will be enlarged to increase its capacity one-fourth, at a cost of $60,000.

The California Peach Growers at the Fresno office announce their total tonnage for the season as 35,000.

The broom industry is a growing one. Seven new broom factories were started in the San Joaquin Valley in 1919.

The Merced-Stanislaus Sweet Potato Association has shipped just 1,000 carloads of 250 crates each of sweet potatoes.

Newcomers from England and Scotland are purchasing many orange orchards about Porterville, Tulare County.

The boys of the Watsonville high school have organized the first agricultural club of Santa Cruz County this year.

The Tulare County Citrus Fruit Exchange reports the sale in the east of pomegranates at as high as $3.70 per half box.

Southern California

Santa Ana is building a $200,000 tourist hotel.

Riverside has two sky policemen to run down speed demons.

The Bakersfield, Kern County, cotton crop will total 1,000 bales.

Calipatria in the Imperial Valley is becoming a winter vegetable center.

The Arlington, Riverside County, farm bureau added 30 members at its last meeting.

A nine mile railroad extension from Blythe to Ripley, the new townsite, is now under way.

The Placentia Mutual Orange Association is building a packing house 100 by 237 feet.

A car of walnuts sent from Hemet, Riverside County, brought a gross income of $16,098.

The Southern California Automobile Club has erected 62,145 guide signs by the roadsides.

W. J. St. John of Hemet picked 250 pounds of walnuts from one tree and sold them for $75.

Hemet, Riverside County, reports ranchers busy sowing grain and the soil in good shape.

The Lima Bean Growers Association has disposed of 150 carloads at 14½ cents a pound.

Orange County citrus growers will receive close to $15,000,000 for this season's citrus crop.

The Anaheim Orange Growers Association will erect another large packing house at once.

The San Diego and Arizona railway was dedicated and the last spike driven on November 15.

During the past four years the Salton Sea has receded two miles on the south and east sides.

The California Prune and Apricot Growers Association will erect a large packing house at Santa Paula.

The 16 members of the Oxnard Walnut Growers averaged over $200 an acre from their orchards this year.

On November 11 cotton sold at Blythe, Riverside County, at $51.25. On the 13th it had dropped to $47.50.

The Orange County supervisors have let a contract for $30,000 to improve the road leading to the county park.

New roads and trails to cost $1,600 will be built in upper San Dimas Canyon under direction of the forest service.

Horticultural Commissioner Ryan of Los Angeles County has issued a warning as to the increased growth of Johnson grass.

San Bernardino County gives official notice that it will produce more than 10,000 cars of citrus fruits during the coming season.

A hospital and school for crippled children will be erected to cost $150,000, a site having been donated by John Brockman.

An Ontario, San Bernardino County, townsman had 11 hens that averaged 215 eggs each for the past year, a net profit per hen of $5.84.

Dr. J. C. Whitten gave pruning demonstrations at Del Sur and Roosevelt on November 21; at Little Rock and Palmdale, 22; Burbank and Lankershim, 24.

The Coast and General

In two districts in Mexico there are 10,000 acres of tomatoes.

The Spokane Valley, Washington, apple crop is 900 carloads.

Central Oregon is troubled with the disease known as the Kansas horse plague.

Sharp advances in long staple cotton have brought prices up to 82 cents for the best staple.

Many complaints are registered at Chandler, Arizona, over thefts of seed cotton by Mexicans.

A thousand pounds of mint oil was recently shipped from Eugene, Oregon, at a price of $10 a pound.

Arizona has 20,714,785 acres of unappropriated public lands, 13,572,220 acres of this is still unsurveyed.

By a recent ruling of the Arizona land board, all state lands leased in the future will be on a five year basis.

Exhaustive dehydrating tests in Yakima, Washington, prove frozen apples are worthless for dehydration.

Most of the sheep on the northern ranges of Arizona have been started for the deserts of the southern part of the state.

The famous Hood River County in Oregon is much less than half tillable, 51,384 tillable acres and 77,782 acres of non-tillable.

Out of 2,000,000 boxes of apples in the Hood River Valley, Oregon, less than 100,000 were handled in horse drawn vehicles.

Cattle on Arizona ranges are reported to be in good condition and ranges in fine shape for the winter in most parts of the state.

The Oregon Growers Exchange is the name of a new Japanese concern at Salem, Oregon. Stock $20,000; incorporators all Japanese.

The Mexican winter tomato crop will be two or three weeks later than usual; the first shipments will be made the last of January.

The world's largest apple packing company, at Dalles, Oregon, will ship 225 carloads, or 180,000 boxes, and the orchard is yet in its infancy.

Morrill Delano, a 15 year old boy, secured a free trip to the Chicago livestock show for winning first prize in the state pig growing contest.

For the first 11 months of 1919 there were sold from Maricopa County, Arizona, and shipped out, 231 head of registered Holstein-Friesians. The average price per head was $332.

County farm agents and all agricultural extension workers met at Phoenix just previous to the opening of the state fair for the purpose of arranging their exhibits and for uniformity and better cooperation in their work.

A company has been formed for the development of 30,000 acres east of Chandler, Arizona. This will be reclaimed by pumps similar to those in use on the large plantation of the Southwest Cotton Company, also near Chandler.

Plans are being completed for the affiliation of the Arizona-American Cotton Growers Association with the American Association. The local association is growing rapidly and expects to assist materially in marketing the crop.

Accomplishments and Possibilities of Cooperation

By Geo. W. Pierce, President California Almond Growers Association, Before Fruit Growers at Chico

TO TELL of the accomplishments of cooperative work among the agriculturalists of California would call for a detailed account of the growth, prosperity and development of the state for the last quarter of a century. Its benefits can best be shown by unearthing account sales of olden days with their frequent lavish display of red ink, and comparing them with present day returns made by any of the cooperative marketing associations.

As a specific example of the accomplishments of cooperative action among producers we cite the case of the California Almond Growers Exchange. In existence nine years it has grown to a membership of 3,200. Annually at date of price setting the books are closed to applicants for membership to participate in that season's sale. This year the desire to get in later has been so strong that more than 200 late applications for membership have been received. While each year the several almond growing sections are canvassed for members, there are always some who decline to become members. The fact that so many came in late this year would seem to indicate that late repentance is caused by unsatisfactory treatment at the hands of the speculator. This latter chap is just as unscrupulous today as 20 years ago. He is held in check today by the cooperative organizations. On each transaction he goes just as far as his tether will permit him. Along this line the organizations have done their part. They are still handicapped by the action of the outside grower, and the future complete success of cooperative selling, which really makes it possible to have anything to sell, must depend upon an educational campaign among independent sellers.

The great bulk of the almonds purchased outside of the exchange are bought at prices that range from $40 to $80 per ton below the prices received by members for the same grade of almonds. A very few in each locality, late in the season, are paid extreme prices as a bait to keep the rest in line for the next season's business. This season's experience is convincing many that they have long been imposed upon. They are turning to the exchange to secure the justice that is denied them in the open market. Give the exchange a 100 per cent organization and it will protect the California grower against even the cheapest imported product.

While its members are preparing in a substantial manner to take care of the almond business in all its branches, securing land, building warehouses, and installing modern machinery, while they are fostering national legislation looking to the benefit of our condition and fighting adverse measures, what is the outside grower doing for the business? While growing and harvesting a crop of almonds is the most important part of the business, it is far from all of it, and the annual expense incurred in trying to make this plain to all the growers is no small burden.

The independent seller, aside from his failure to cooperate, is a detriment to the business. If he could only reduce his status to the zero point, it would be a gain for the industry. As it is he is a negative quantity that must be overcome by the efforts of some loyal producer before he himself can really begin to build up his organization.

Just what line of argument induces a grower to become so blind to his interests it is difficult to surmise. In the early days of cooperative work, when the organization was not as strong financially as now, it could not pay growers as promptly as they are paid at the present time. This fact was worked threadbare as an inducement to remain outside. Now it has lost much of its effectiveness because of the practice of the exchange in paying about 50 per cent of the value of the product on delivery. This is followed by other payments at short intervals as the crop is moved.

Harvesting Almonds

There exists no logical reason for any grower to decline to become a member of a cooperative marketing organization managed along modern progressive lines. The only excuse such an organization has to offer for its existence is its ability to render service to its members.

It is controlled by a board of directors financially interested in the business. If the policy adopted by this board fails to bring desired results a new board with new policies may supplant the old within a year. The management is in the hands of a salaried officer who must make good or retire. The organization in every branch of its activities is directly under the control of the producer. If under this arrangement one cannot obtain satisfactory service he is doomed to disappointment for the remainder of his days.

The cooperative organization gives service through a score of avenues. Any cost of upkeep is returned many times over by benefits received. These come to us at such frequent intervals and often in such unexpected ways that we are wont to overlook many of them. In time of adversity when disaster in some of its many forms overtakes your industry, as it is almost certain to do, you need the strength that numbers and experience can give. To minimize the effects of disaster preparation in advance is necessary. The most effective safeguard yet devised by man for the protection of any given industry is a live cooperative association of parties interested in the success of the enterprise.

As producers we owe it to our customers, the consumers of our output, that they be relieved of all unnecessary burdens and expense. It is not only our duty to do this but it is good business. It will increase consumption and insure a steady demand. Under ruling conditions the consumer pays for transportation, distribution and possibly some graft or extortionate charges made somewhere along the line of travel. He is frequently forced to pay 100 per cent or more over the price the producer receives. Good return, that, on capital invested but a few hours. It goes without saying that this is unjust both to producer and consumer. Many of these charges for a passing service are too high. Some of them should be eliminated wholly. The consumer justly complains. He charges up all of the high cost of living to the producer when, as a matter of fact, only in one-half of this charge does the producer participate in any way. Naturally under this view of the matter the producer is termed a profiteer. Consumption falls off and ill feeling is engendered.

The producer should extend his field of operations so as to control, or at least regulate, delivery. This is possible under cooperative management. We have retired the speculator. Let us now turn the light of day on the petty grafter and make him a thing of the past in so far as the marketing of our produce is concerned. With a firm hand on the marketing end of our several lines we can free ourselves from the suspicion that now exists that we are profiteers. That this suspicion exists, there is no doubt, and our apathy in the matter adds converts to the belief.

Within the last month a call was issued to the mayors of 145 cities of the Pacific Coast to convene in Sacramento with the avowed purpose of formulating a plan for boycotting certain farm products. These official representatives earnestly discussed and favored the enactment of such laws as would put every cooperative selling organization in the state out of business. They invited chaos. They even went so far as to petition Governor Stephens to convene the legislature in special session for immediate action on the proposed measures. Had this scheme worked to a successful finish what would it have meant to the producing classes?

It is easy to predict what it would have done to the cities. Had the proposed boycott extended to all farm products, and had that boycott been religiously observed for a period of 30 days, we know that we would have lost for all time 145 customers, for this self imposed famine would in that time, or less, have scored a record of 100 per cent.

Here is a pressing two-fold demand for immediate cooperative action among producers. First, its mission is humanitarian, as it is called upon to aid in preventing starvation in the cities, the possible outcome of their own visionary theorists. From a commercial standpoint it must preserve the city as a necessary outlet for our ever increasing farm products.

At the mayoralty gathering referred to only two producers organizations were represented, and that representation was accidental. It was proposed to close the market for three quarters of a billion dollar's worth of annual farm products in California. Back of these enormous accumulations, representing as they did the sole income and dependence of our entire farming population, came a mere chance defense. Luck, rather than foresight, saved the day. It so happened that our very able and active state market director, Col. Harris Weinstock, dropped in at the meeting. In his very forceful manner he did much to help defeat the pernicious measure.

This attempt to make us reponsible for the sins of others has been temporarily tabled, but at the next session of the legislature, if we mistake not, this measure will be revived with conditions more drastic, if possible, than those contained in the original. Are we as representatives of the producers, going to be prepared at that time to make adequate defense? Can we afford to let so important a matter drift, to be taken care of by a chance defense?

Besides this there will be much constructive work needed at each recurring session of the legislature. To successfully meet this we should have a central representative body composed of delegates from each organization connected in any way with the production, handling or marketing of California grown food products. The findings of this body should be cared for and our interests furthered by one or more persons skilled in legislative procedure.

It is a trite saying that the farmer does not realize his strength. Cooperative methods are fast revealing the secret. It is now on the tongue of every progressive farmer. The powers and possibilities revealed to date are greater than the most enthusiastic had ever anticipated. We cannot justly take unto ourselves, however, the credit for having solved the problem. Union labor did that, and applied the newly gained information to its own benefit in so vigorous a manner that in self defense we have been compelled to adapt the formula.

Union labor, our instructor, is burdened by the possibilities revealed. It cannot judiciously use the vast fund at its disposal. But this is no cause for wonderment. Suddenly acquired riches are frequently misspent. The child does not overeat confectionery because it wants to be sick but because it likes the candy.

The attempt to openly defy our government, now being tried by union labor, is ill advised. Our instructor is showing us by example what we ought not to do. He is working out the proper status of this new government factor. Experiments are frequently expensive and sometimes disastrous. Our position at this time is extremely fortunate. We have the same opportunities as those enjoyed by our instructor. We are in a position to get more out of them than is he. While he is placing warning signs at pitfalls and dangerous crossings, he has no more interested onlooker than the farmer. As certain as fate we are going to use the power he is now developing. It is to be hoped that we can inject into it an adult dose of respect for the rights of others. He has cited mistakes galore for us to shun.

While we are learning our capabilities we must also learn our limitations. When the pioneering work is over and all are compelled to recognize that ours is a government of right, not of might, we will file on as much of the newly developed power as may be necessary, not to oppress, but to protect.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

No orchard industry is increasing in California with greater rapidity than is almond growing. The best of it is that the industry may continue to grow for years to come and still be in no danger of overproduction. This product is a staple and the country is importing every year thousands of tons. Our 50,000 acres is hardly a start in supplying the great demand for this delicious nut. This year every tree which can be secured from nurserymen of the state will be planted.

NUTS INCLUDED

Secretary Lake of the American Pomological invites us all to the next meeting of the association to be held in St. Louis, December 30. The American Pomological has a wonderful record of helpfulness almost since the practice of horticulture began in America, and the secretary now urges that this work continue and asks the "support of all amateurs in fruit growing, including nuts, as well as all commercial growers."

PURE SEED

The Associated Chambers of Commerce of Riverside County is a live wire in looking after the interests not only of the commerce of the county but of its productive industries. Its latest move is sponsoring the bill looking toward pure seed for California planters. This is the bill which passed the last legislature but failed to secure the governor's signature. The Riverside organization is joining with hundreds of others in creatiug early and positive sentiment for pure seed.

CYRIL G. HOPKINS

Many California producers will recall a series of valuable meetings held in Los Angeles and addressed by Profs. King and Hopkins, and also the addresses made by Dr. Hopkins at the Santa Barbara Fruit Growers Convention. Dr. King died soon after his return from California and we now note the death of Dr. Cyril G. Hopkins, agronomist and soil chemist for many years with the University of Illinois, also connected with Cornell University, South Dakota state college of agriculture and southern settlement and development organizations. Dr. Hopkins has been often named "the nation's greatest authority on soil fertility."

He is the author of "Soil Fertility and Permanent Agriculture," "The Farm That Won't Wear Out," "Story of the Soil," and many other works, including innumerable bulletins issued by the Illinois University and the United States department of agriculture. He was born at Chatfield, Minnesota, in 1866.

LEGISLATION COMMITTEE

"Resolved, That a committee of three be appointed by the director of agriculture to proceed at once to organize a legislative committee representative of the agricultural interests of California and whose expenses shall be provided by the several organizations such committee shall represent, whose duty it shall be to determine what legislation shall be asked for by the producers of the state and shall diligently prosecute effort to get such legislation enacted; and, further, in emergency cases, such committee shall act in all practicable ways for the advancement of the agricultural interests of the state."

The above is from a resolution passed at the recent State Fruit Growers and Farmers Convention at Chico and the committee appointed consisted of C. C. Teague, A. E. Sunderland and F. B. McKevitt. Appreciating the importance of its mission this committee called in many other representative men attending the convention and devoted an entire evening to discussing the first step to take in forming the larger committee which shall have to do with the legislative side of California agriculture. This committee will doubtless have as its foundation members from the various cooperative organizations of the state.

A representative committee discussed agricultural problems for many months preceding the last session of the legislature. It accomplished great good, but the time was not yet ripe for bringing together and harmonizing enactments of the past half dozen state legislatures. Besides, other bills which should have become laws have not had sufficieut support to secure their passage or possibly their signing by the governor. For instance, the pure seed bill failed of approval because it carried an appropriation and the governor was forced to veto it with other worthy bills in order to reduce the appropriations. Now with this committee acting as a clearing house, wiping out worthless and retaining necessary features, it will be possible for those who have the welfare of our agricultural interests at heart to put forth an effective effort that will secure the passage of needed legislation.

ASK AND RECEIVE

We recently heard State Director of Agriculture Hecke give assurance to a representative of a community needing state help in solving some of its horticultural problems that the entire machinery of the great organization of the department of agriculture was at the service of the producers of the state. There is scarcely an agricultural activity but should take advantage of the service offered by the department of agriculture. For instance, one of the most serious problems confronting the vineyardists of the state at the present moment is the mealybug. Mr. Hecke has been especially fortunate in securing the services of Dr. Nougaret, who is not only fitted by years of experience in vineyard work, but also by his enthusiasm, to handle a problem as difficult as that of this pest of the grape which has destroyed the value of thousands of tons of grapes this year. The best control of this pest calls for winter treatment. What this treatment shall be will be given out by the department presumably between now and the first of the year.

NEW OVERLAND

San Diego and the entire coast is now celebrating the opening up of a new line of transportation. This road will mean much to the prosperity of the city and county of San Diego. The first freight train over the new line is scheduled to leave San Diego Monday evening, December 1, and arrive in El Centro the next morning. The train will be made up of one car of canned fruits, vegetables and fish, one car macaroni, 17 other cars of rice, beverages, salt, implements and miscellaneous merchandise.

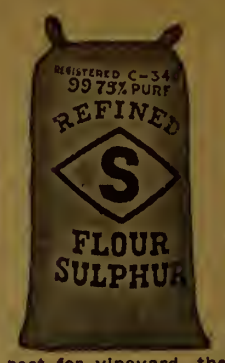
San Diego has called loudly for years for a direct outlet to the East.

HANDWRITING ON THE WALL

Cooperation is being accepted by California farmers as never before. It is not being accepted passively; the believers in cooperation have been aroused to fighting pitch and propose to see the principles of cooperation endorsed and carried out. No article recently published in the Cultivator has attracted more attention than "Bunk—An Editorial," in our issue of September 27. Writing regarding that article F. H. Harvey, mining engineer and metallurgist of Galt, says:

"I am enclosing $1 for subscription to your paper. I already have more than I can read, but cannot resist subscribing to your paper after the interest you have taken in the dairymen's organizations of California. You are certainly doing constructive work in this line and should have the support of every dairyman. If you could mingle with the dairymen as I am doing you would find them a unit for the association and willing to make any sacrifice for the same, as they realize in the hands of the operators and vested interests they are doomed to destruction. It seems strange that these interests cannot see the handwriting on the wall."

SULPHUR



It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphur that money can buy; the best for vineyard, the best for bleaching purposes, LEAVING NO ASH.

VENTILATED sublimed Sulphur—Impalpable Powder, 100 per cent pure, in double sacks, for Dry Dusting and making Paste Sulphur.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men $4 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR 100 per cent pure. This has increased various crops up to 500 per cent.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur Mixtures, etc.

And "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 DEGREES BE., Fungicides and Insecticides.

Carried in stock and mixed to order.

San Francisco Sulphur Co.

624 California Street. San Francisco, Calif.

We are equipped to make immediate shipments. Send for "ILLUSTRATED BOOKLET," also booklet "NEW USES FOR SULPHUR", Price List, and Samples.

Please state for what purpose you use the sulphur, quantity needed, and date of shipment preferred.

CAPRIFIG SUPPLY

Now that the fig planting season is approaching it is well to warn the prospective planter to set out one or more caprifigs with his Smyrnas or Calimyrnas or he may get no crop when the trees become of bearing age. Every year complaints are heard of figs dropping when of small size and investigation reveals the fact that the trees are Smyrnas. These will not bear except the blooming figs are visited by the fig wasp, and the wasp lives only in the caprifigs. It has been suggested that if the Smyrna fig grower has no room for caprifigs he may have a tree of some poor variety which may be topworked to caprifig, or caprifigs, for one needs more than one variety of the latter if he has room for it. Two year old scions grafted into the top in two or more varieties would provide homes for the fig wasp throughout the year. The grafts will bear the second year. It is said there is always a shortage of caprifigs in Asia Minor and that the same trouble will be experienced in California if indeed we do not already suffer from it. From this statement it would appear that anyone growing a surplus of caprifigs could easily dispose of the crop. The United States department of agriculture suggests the planting of cooperative caprifig orchards by the growers in each section as the industry would be much more successful than if handled by several individuals. The department would supply such associations of growers with a free supply of trees or cuttings of the best caprifig varieties.

RAISIN COMPANY WILL HELP GROWERS

A new department which will assist growers in producing more and better raisins per acre has been inaugurated by the bureau of service of the California Associated Raisin Company. The new department will be in charge of Fred K. Howard, formerly horticultural commissioner of Kings County.

Problems of planting, cultivation, pruning, irrigation, fertilization, insect and disease control, as well as methods of picking and curing the crop, will be investigated. Assistance will be given to growers along these lines in an effort to secure raisins of the highest possible quality. Information on any phase of raisin production will be furnished free to all members of the Associated Raisin Company, even though it require a personal inspection of the vineyard by specialists on the staff of the bureau of service.

CALIFORNIA APPLE CROP

From the last report of the United States bureau of crop estimates it appears that California is fifth in the list of apple producing states. We were fifth last year, too, though we grew 336,000 boxes less than in 1919. Last year New York was first, with a heavier production than the first state, Washington, has this year, but New York's apple crop is this year less than half that of 1918. The most notable change is the climbing into first place of Washington and that state will doubtless hold the lead for many years to come, for her orchards are young and each year an immense new acreage comes into market.

In 1918 the states stood as follows, in the order of their production, the figures representing barrels: New York, 5,950,000; Washington, 4,296,000; Virginia, 1,776,000; Michigan, 1,495,000; California, 1,127,000. This year the rank and crop is: Washington, 5,865,000; New York, 2,712,000; Oregon, 1,402,000; Virginia, 1,507,000; California, 1,339,000. To convert these barrels into boxes multiply by three. The box states are: Arizona, Utah, Idaho, Washington, Oregon, California, Montana, Colorado and New Mexico. A severe freeze in Washington and Oregon during the latter part of October reduced the crop by about 1,000 cars.

Some snow has fallen on the higher elevations of Arizona, with consequent cooler weather. This is said to have caused grass fattened stock to shrink to some extent, but the cooler weather has hardened them and their condition is consequently improved. Shipments have been brisk, particularly of one and two year old stuff.

La Crosse TRACTOR

$1450 Cut to $1195

WE are pleased to announce that in spite of rising costs the production of the La Crosse Tractor has become so standardized that we offer a reduction of $255 from the former price of $1450.

We have been allotted a limited number for distribution at the remarkably low price of $1195. This is the standard Model G three-plow tractor, rated at a full 2,000 pounds drawbar pull. With its perfect kerosene burner and its own twin cylinder horizontal motor it holds many records for low fuel cost and dependability.

The price of $1195 is for the tractor complete with belt pulley, fenders and governor ready for work.

It has the fewest number of parts and every part is very accessible. There are thousands of these tractors being used successfully under many different conditions.

If you ever intend to have a tractor here is your opportunity to get a dependable three-plow tractor at a price only made possible by standardized quantity production.

During the next two weeks we will be increasing our number of dealers. If we do not have an agent in your community, and you know a live dealer who wishes to build a permanent tractor business on a proven success, urge him to write us at once.

Even though the production on this standard model will be more than doubled in 1920, the factory cannot promise delivery beyond present allotments.

The Famous Hardie Junior is a Real Power Sprayer

It has sufficient capacity for two lines of hose. It has plenty of power for high pressure effective spraying. It is little in first cost, weight, and upkeep. It is big in real value, engine power, pump capacity and ability to do successful spraying. We believe this is the greatest small power sprayer ever manufactured, and placed on the market with phenomenal success in every fruit section in United States and vouched by thousands who own the Famous Hardie Junior. Equipped with 1½ horsepower engine, Magneto ignition, 150-gallon tank with mechanical agitator, capacity of four gallons per minute with a steady working pressure of 200 pounds, and two 25-foot of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

All for $325. ***Delivered anywhere in this state***

If truck is not needed, deduct $55.00.

These prices are subject to change without notice. The wise buyer will place his order now.

This low price is made possible by big production.

If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer.

The HARDIE ORCHARD GUN is $12.00, none better. Every one is guaranteed to give satisfaction to the user, or his money refunded.

The Hardie Spray Hose is the safest hose to buy.

Improved Pruning Methods

By Ernest Braunton

THOSE who have been used to the cut-and-slash methods of pruning would be astonished to witness the milder and saner methods now being demonstrated by Dr. J. C. Whitten, chief of the division of pomology of the state university. Few orchardists understand pruning aright and all except the largest growers trust the annual pruning to laborers who are seldom much interested in the work or secure very beneficial results.

Heretofore we have arbitrarily slashed off the tops of trees to reduce the height, cut out crossing and interfering interior branches and called it pruning. But Dr. Whitten shows a new system, telling his audiences the whys and wherefores of every cut he makes, until even a child may become familiar with the specific needs of every tree operated on. He is a fluent, enthusiastic and convincing speaker and is never at a loss for satisfying answers to the many questions his practical fruit growing audiences evolve as they watch his demonstrations.

This new method of pruning has a scientific basis, for whereas in the past we have studied the tree from the outside only, being all an orchardist could do, Dr. Whitten and associates have studied it from the inside. Many trees, many parts of trees, at different seasons have given samples of their sap for laboratory study. These sap examinations show at what time of the year it is nearly clear water, carrying little food for any vegetable substance, and at what season or seasons it is the vehicle for starch and sugar. Knowing then the secret of the tree's life support the scientist can tell the orchardist just what his trees are doing at any and all times of the year, so far as their most intimate functions are concerned. In the past we have slashed away at the outside of a tree without knowing what was going on within, just as we still bind wet cloths on our poor heads in the hope that the treatment will cure a bilious headache, the cause of which is altogether on the inside. If we learn sufficient of the sap movement of trees and when sap is richest and when poorest we shall come to learn how to divert it into proper channels to get major results in our fruit crops.

Dr. Whitten does no beheading, except of theories supporting the old style pruning (not pruning system, for it did not deserve the name of system). His gospel of the tree resulted in the first trial of the new system five years ago, and subsequent results have satisfied all investigators that his methods are both safe and sane. He approaches a branch with shears in hand, stating that instead of cutting off the top two or four feet he will leave the full length, thinning around it so the laterals will develop instead of all the sap shooting up to make new upright growth as after the usual beheading process. The result is that instead of making a rank, upright growth of four to six feet, the tree fills out with fruit bearing laterals and the top growth in a year does not exceed a foot in length. Then, if you want to take off this foot next year, your tree is no taller than it was the year previous and you have cut away but mere twigs. In the meantime the lower lateral growths have filled out in all parts and the tree has developed a most satisfying capacity for fruit bearing. Each subsequent year this thinning process goes on, and Dr. Whitten says that at 18 inches above a fork the branches should be 18 inches apart. Again he will say: "This branch, which needs thinning, we will clean up on the outside, leaving the fruit spurs on the inside only so the weight will pull the branch in. It will hang well out as it is, and after it has borne this year's crop must be taken off entirely, for this other inner branch is going to swing out to take its place as the permanent leader and framework for this part of the tree."

His every use of the shears is explained as quoted and he is by no means autocratic, lending a willing ear to all advice and criticism. For in his audiences are many experienced orchardists and some of them part reluctantly from long cherished theories on pruning. But Dr. Whitten makes splendid headway wherever he goes and doubtless will not have a hearer but will at least modify his pruning from that practiced in the past.

American Pomological

Secretary E. R. Lake, Washington, D. C., writes regarding the coming annual of the American Pomological which will be held at St. Louis, Missouri, December 30, 31 and January 1. Mr. Lake says:

Dr. Bailey in his last letter just before leaving for Europe, July 6, said: "I think all we can do at this time is to call a conference, and with no informal program beyond reports of committees and the society business."

Accordingly this is to advise members of the event and its purpose. It may be well, however, to add a few words in further explanation of the topics to be considered. Stress will be put uopn the fact that the society desires to enlist the support of all amateurs in fruit growing, including nuts, as well as all commercial growers who love fruits for themselves as well as for business: To consider the revival of the earlier activities of the organization in the exchange of varieties; discussion of nomenclature; reports upon the behavior of new, little known and favorite old varieties; a permament home; the affiliation of all state and district societies; a tie that will bind; colors, buttons, emblems or monograms. In fact, the whole event is to be devoted to the work of thoroughly reorganizing the activities of the society and arousing the committees, which have been too dormant during recent years, to up-to-the-hour action.

Dr. Bailey has his pocket full of suggestions for new things and new ways of accomplishing them, and it is the earnest desire of all the officers that every person interested in the upbuilding of a real American pomology attend and present his views as to how the American Pomological Society may best serve the cause which it represents.

BUDDED TROPICAL FRUITS

No more rapid strides in the improvement of tropical fruits have como to California horticulture than those of the last five years. Now all avocados and loquats are budded and seedlings no longer offered for sale. But since the progress was accomplished, other lines have undergone the same change. One may now purchase budded or grafted trees of the best varieties in feijoas, cherimoyas, sapotes and carobs. Of course, one must pay for them in proportion to their value over that of the seedlings heretofore sold. Feijoa may be had in several named varieties at $3 for good-sized plants, the Superba and Choiceana being among the best. Cherimoyas will cost $2.50 in like size and the Sapote may be purchased for the same price in three or more sclect named varieties, and the same may be said of carob trees. These improved budded varieties have already stimulated planting of these fruits, and in a few years productive orchards of them will be quite common.

COATES CATALOG

The 1920 cataiog of the Coates Nursery Company of Morganhill, containing a fuii list of fruits and ornamentals, rcaches us with a special insert announcement that causes no surprise to those who have investigated their new prune.

"The demand for our largest prune, Coates Fronch 1418, has been so great that ali but a fow were sold bcfore this catalog was ready to mail."

Bud Selection and Variation

By Ernest Braunton

THE Chaffey junior college of agriculture, Ontario, San Bernardino County, Geo. P. Weldon, pomologist, has been holding a very interesting, instructive and well attended ten day institute for the benefit of the fruit growers. A great variety of subjects has been presented and discussed, but none was more interesting than the two hour lecture on bud variation and bud selection by A. D. Shamel of the United States department of agriculture, for the past nine years stationed at Riverside.

A few years ago Mr. Shamel was one of a party of experts sent to Bahia, Brazil, to study the navel orange in its ancestral home. There he visited the navel orchards of Col. Baredo, whence came the two trees that were sent to Riverside, from which all our Washington navels have sprung. These orchards were at that time 70 and 80 years old and still bearing heavily. The first navels came from a seeded variety known as Selecta and the sports must have been very common, for when the party journeyed to Rio Janeiro to visit the Selecta orchards the first tree Mr. Shamel saw had one branch upon which nothing but navels were growing. That all the fruits from the sporting bud should be navels shows that it does not revert, and if we argue from the Mendelian law the statement could be made that this proves that all oranges were originally seedless! But Mr. Shamel made no such claim for he did not touch upon this phase of the subject.

It is strange, however, that bud variation was not earlier recognized and bud selection practiced. For farmers that trapnested their hens and tested their cows by the Babcock method to discover the boarders still indiscriminatingly cut budwood from any vigorous tree without regard to its crop performance. Indeed, the trend was quite in the opposite direction, for in as much as the barren trees made the most vigorous growth these were selected for budwood! Now the practice is to choose buds from those trees that produce the heaviest crop of the best oranges over a term of years in which the individual tree performance is carefully recorded. Each succeeding generation this is continued the nearer will the trees approach the ideal striven for.

Mr. Shamel had a fine lot of mammoth photographs to illustrate his talk of oranges, grapefruits and lemons, for the rules apply to all these fruits as well as to the orange, and the writer will venture the assertion that it will not only apply to these fruits but to all others and to all things living. This Mr. Shamel believes but stated he did not care to so assert because his present work is with citrus fruits only. Though Mr. Shamel's talk was one of the longest of the institute it was listened to with the deepest attention and not an auditor vacated his seat. This is not alone a compliment to the speaker but to the audience, for it shows that the orchardist is taking a keener interest than ever before in all methods that promise him better fruit or better yields. He wishes to get rid of the star boarders and retain the producers.

DEHYDRATION

Continued from Page 715.

these two newly discovered and not yet named substances, called by some the "fat soluble unknown" — substances apparently as essential to us as salt, but whose absence unfortunately we cannot detect by taste as we can the absence of salt.

Dried Vegetable Habit

To get into the habit of using dried vegetables would result in a tremendous change in the agriculture of the world. It would create demands for the products of plants which are now grown in comparatively restricted areas, and these areas would extend, just as the areas of the sugar beet, which in Napoleon's time were small, have grown until they cover vast regions of the globe—675,000 acres in America alone.

The sweet potato is one of the plants which would be affected at once, for its limiting factor of cultivation is its poor keeping quality and the fact that it rots if exposed to a temperature below 45 degrees. It already ranks second among the vegetables grown in this country, notwithstanding its perishability.

Dried sweet potato slices form one of the most successful of all dried vegetables, for they "come back" when soaked, retain their sweetness and flavor, and can be fried or candied in a most appetizing way.

* * *

It was the pleasure of the writer recently to make a test of dehydrated products in a meal made up almost exclusively of these products. The white bread was made of 20 per cent potato flour. In this case by potato flour we do not mean the extremely high priced starch flour used in the making of fancy pastries, but dehydrated potatoes reduced entire to a fine flour. The flour used in making the muffins was 33 1-3 per cent potato flour, while the small fruit cakes and doughnuts, or fried cakes, were made of flour of which 40 per cent was sweet potato — and we wish to say these were most delicious.

The sauces and marmalades had been dehydrated and water added and again made into a most delicious table product.

The enjoyment of this feast was increased by the fact that these products were practically all made from oranges, bananas, potatoes and sweet potatoes that would otherwise have been wasted because they came on a glutted market. If the world goes hungry because of the waste of these foods it becomes nothing more nor less than criminal, and this process of dehydration, which has been so fully discussed, offers the solution. In the issue of the Saturday Evening Post of October 18, 1919, Herbert Quick discusses "Taking the Water Out of the Cost of Living." He says:

* * *

I believe that by dehydration a large part of the more than 50 per cent of our fruits and vegetables which now spoil will be saved, that we shall be able to ship such things as sweet potatoes and potatoes, for instance, to foreign countries without danger from freezing or rotting, and that these products will be so reduced in bulk and weight that one railway car or one ship will carry as much food as ten can carry now, that it will be as good in quality as the foods we obtain by our present methods, and much of it better; and that by this development of saving food by taking out the water in it the world will be able to support its present population in greater comfort and care for an immensely greater population in case of the seemingly inevitable increase as it tak s place.

We get this new knowledge as a by-product of the war, and it seems possible that it alone is enough ev

6% loans to farmers!

Do you want money on a *non-maturing mortgage* for a term of 5 to 40 years? Do you want to re-finance your present mortgage? increase your land holdings? buy additional equipment or live stock?

The farmers, horticulturists and stock-owners of California and Oregon may now obtain 6% loans ranging in amounts up to $37,500. This has been made possible thru the recent organization of the California Joint Stock Land Bank of San Francisco.

Loans made by this bank may be paid off any time after five years—and the borrower may enjoy the unusual privilege of taking 40 years to repay his loan in installments.

The loans are made under the supervision of the United States Government.

Important Features

1. No limitations or special conditions as to how money borrowed shall be used.
2. The mortgage never becomes due. You pay no renewal expenses.
3. Payments may be extended over a period of 40 years.
4. The land may be sold subject to the mortgage.
5. The borrower pays no commission. We loan *direct* to farmers. Loan made up to 50% of appraised value of the land, and 20% of the insurable improvements.
6. Positively no red tape of any kind.
7. The best and broadest type of service ever extended to farmers.

Officers

tually to repay to the world the huge material losses of the war. The most nearly perfected methods of dehydration are as much superior to the old ways of drying as the modern cold storage warehouse is better than the ancient mode of keeping things fresh by hanging them down the well. So far as is known the improvements have been made in America, though before the war other countries were far ahead of us in this old-new industry. For instance, Germany went through the war on dehydrated potatoes. Petrograd was fed for a long time—and may be yet, for aught I know—on dehydrated potatoes shipped in gunny sacks.

The magnitude of the industry in Germany is astounding. In 1914 there were 488 potato drying plants in operation there. In 1917, under the stress of war, this number of plants, had been increased to about 1,900, and some 2,000 breweries were utilizing a part of their plants for drying potatoes. In 1917 Germany dehydrated more than three times as many potatoes as were produced in the whole of the United States! Says Major Prescott, detailed from the bureau of chemistry for dehydration work: "The German product is not so good as the best American product of today, and we have little reason to doubt, therefore, that if insistence is laid upon the high quality of the raw material and the use only of the best methods, the dehydrated vegetable industry in the United States will develop at a rapid rate and become a powerful factor in the conservation movement and the stabilization of agricultural crops."

The division of dehydration was a war activity. It was a part of the department of agriculture, but worked intimately with the food administration and the war and navy departments. Through its work some 500,000,000 pounds of raw foods were dehydrated, reduced to 50,000,000 pounds by the process, and shipped abroad. This amounts to 25,000 tons, or, say, five shiploads, which, in its raw state, would have taken 50 ships, and much of it could not have been shipped without great spoilage.

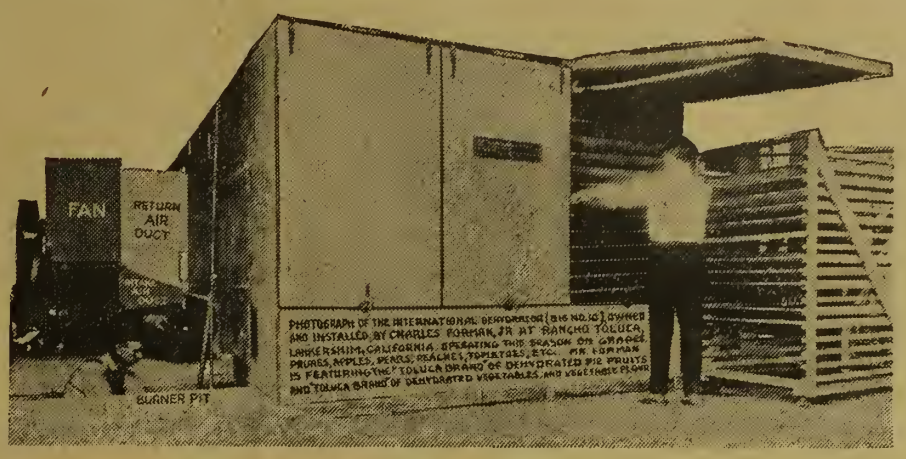
During this war period the whole matter of taking the water out of fruits, vegetables, fish, shellfish and meats has been gone into scientifically. It is now possible to dehydrate these articles of food in such a way that the cells do not break down or close up; the amount of water taken out is so controlled that though the food product is dehydrated it is never totally dried. It is brought so low in moisture that dehydrated green peas, for instance—or potatoes, or apples, or sweet potatoes, or green corn, or spinach, or peaches—will keep as long and as well as wheat, and yet when soaked, after no matter how long a time, they will take back into the same cells almost the same amount of water originally contained in them; they will become fresh vegetables again, and when cooked will be just as good as before they were dehydrated. Such things as lettuce, cress and radishes, which are eaten uncooked, cannot be brought back to their original crispness, and dehydrated tomatoes will not be very satisfactory if served raw. They come back to a wilted state, but are quite as good when cooked as before the dehydration process took place. Green corn on the cob is dehydrated by boring out the pith of the cob and then drying, and when soaked back it is quite as good as it was when prepared. It is better than most of the green corn bought in the cities, because it may be dehydrated when it is fresher than it is likely to be in city markets.

GOVERNMENT WHITEWASH

Slake a half bushel of lime with boiling water, keeping it covered during the process. Strain it. Add a peck of salt dissolved in warm water, three pounds of ground rice put in boiling water and boiled to a thin paste, one-half pound of powdered Spanish whiting, one pound of clear glue dissolved in warm water. Mix well together and let the mixture stand for several days. Keep the wash thus made in a kettle or portable heater, and when used put it on as hot as possible with painter's brushes or with whitewash brushes.

The International Dehydrator

"The Salvation of the Fruit Growers"



Patent Applied For

Tons Will Be Saved This Coming Year

in Apricots, Prunes, Peaches, Grapes, All Fruits and Vegetables

By The

International Dehydrator Machine

The Best Insurance in the World Against Crop Loss

Every FRUIT and VEGETABLE GROWER and all CANNERIES should use this approved method without delay. The establishment of an International Dehydrator in any community is a mark of progressive distinction. "Fifty-four per cent. of vegetables and fruits that come to maturity are lost."—U. S. Government Report.

This machine is not a "toy" nor a "hot box." It is a real commercial proposition.

Every grower should book his order AT ONCE for future delivery, as we are fast approaching our manufacturing capacity for the coming year.

Premium prices were paid to growers for the 1919 season's dehydrated products over other methods of drying by packing-houses. Get some of this money in 1920 for superior products.

This Folder Tells You How To Make Your Idle Land Earn Money

This is the day and age when you should make every foot of land produce profits for you. If you have any size tract ranging from 80 to 5,000 acres in the Western States that need development you should send for this book at once. It tells you the way to develop your property through the use of Hydro-Electric plants, gravity irrigation systems, pumping plants, grading, and buildings; in fact, it points out the various essentials that are necessary to make your ranch a producing property.
Now is the time to act, so that you can get a crop from your land next year. It is a certainty that crops will bring good prices next year, so take advantage of this condition and get your land under cultivation now.
Write today, stating location of land and number of acres.

Kerosene Light 10 DAYS TRIAL FREE

BEATS GAS OR ELECTRICITY

Make your home bright and cheerful, **saving one-half** on oil. Government and leading University tests prove this wonderful new Aladdin nearly five times as efficient as best round wick open-flame lamps. **Burns 50 hours on one gallon** common kerosene (coal oil.) No odor, smoke or noise, no pumping up, easy to operate, won't explode. WON GOLD MEDAL. GUARANTEED. Prove for yourself, without risk, by

Ten Nights Free Trial

that Aladdin has no equal as a white light. If not satisfied, return at our expense. $1000 given anyone showing us an oil lamp equal in every way to this NEW MODEL 8 ALADDIN.

GET YOURS FREE We want one user in each locality to whom customers can be referred. In that way you may get your own without cost. Be the fortunate one to write first for **10 DAY FREE TRIAL OFFER** and learn how to get one FREE.

MANTLE LAMP CO., 101 Aladdin Bldg., Portland, Oregon

LARGEST KEROSENE (coal oil) MANTLE LAMP HOUSE IN THE WORLD

Agents Wanted

Make big money spare or full time. Our easy selling plan makes experience unnecessary. We start you without money. Sample sent for 10 days trial and **GIVEN FREE** when you become a distributor.

SMOKE YOUR MEAT THE "WRIGHT" WAY

Thousands of Farmers are Using Wright's Condensed Smoke (made from seasoned *Hickory Wood*). A small brush, thirty minutes and a $1.00 bottle **Wright's Smoke,** smokes a barrel of meat. *Smokes it thoroughly and gives the meat a delicious flavor.* No fooling with fires. No danger of meat spoiling. No drying out or shrinkage. Easier, Cheaper, Quicker and better than using a smoke house.

Curing Meat Before Smoking is very important. Wright's HAM PICKLE is a scientifically prepared sugar cure that gives perfect results. A $1 jar and 27 pounds of salt cures a barrel of finely flavored hams and bacon.

Wright's FARM BUTCHERING SET (Nine regular butchers' tools, including saw and cleaver) should be on every farm. We buy in carload lots and **Re-sell at Cost—$3.95.** Send for instructive booklet: *"The New Way of Smoking Meat."*

All Wright Products are Guaranteed. Sold by All Drug and General Stores.

E. H. WRIGHT CO., Ltd., Established 1895 804 Broadway **Kansas City, Mo.**

BUILDING THE TREE

In his pruning talks Dr. J. C. Whitten advises cutting off the young tree at about 30 inches high. Three leaders should then be selected at the close of the season, one at a foot or so above the ground and preferably on the south side, and the two others on other parts of the trunk and about eight and 16 inches above the lower branch. This starts the head equally on all sides of the trunk and also distributes it up the trunk for a range of 16 inches.

It has been found that by short pruning the young whip to 18 inches the leaders start out at nearly the same point, four or five usually being left. Within two or three years these merge into a solid growth and become wedge shaped where they join at the tree and can never become any larger at that point. This condition causes a choking of the sap flow and food is never again as free to the top. If one of these branches is broken out the hole left is always shaped as though an iron wedge had been driven in and pulled out again.

Properly distribute your leaders, only three in number, and such conditions cannot prevail. The next year leave the three chosen for leaders unpruned, and nip off all other leaders to four or five leaves. These will shade the trunk, be the first fruit bearers, elaborate the sap through the leaves and thus become the first food storers. Each of these three should then be allowed to branch into two, making then six leaders. At 18 inches from the fork these pairs of leaders should be 18 inches apart. Thus is started Dr. Whitten's ideal deciduous tree.

WHAT FRUITS TO PLANT IN ARIZONA

A list of fruits and varieties adapted to Arizona conditions has been prepared by J. Crider of the college of agriculture at Tucson. It shows varieties adapted to lower and warmer localities and to higher and colder sections. This is exactly the information that has been needed by planters in Arizona where such a variety of climates prevails and where so many mistakes have been made by planting varieties of fruits not suited to the climatic conditions of the region.

Varieties are listed as adapted to four localities: 1,500 feet elevation and below; 1,500 feet to 2,500 feet; 2,500 feet to 4,000 feet; 4,000 feet to 6,000 feet. Apples are growing at Alpine in Apache County at an elevation of considerably over 7,000 feet.

The list includes a wide range of fine varieties of the following kinds of fruit: Almond, apple, apricot, feijoa, fig, grape, guava, horenia, jujube, lemon, lime, nectarine, olive, orange, pear, peach, pecan, persimmon, plum, pomelo, pomegranate, prune, quince, blackberry, dewberry, raspberry, strawberry, gooseberry, cherry and walnut.

This may be secured free on request from any farm agent or from Agricultural Extension Service, Tucson, Arizona.

MARKETING ACCOUNTING COURSES

Accounting systems for marketing organizations, prepared by the bureau of markets, United States department of agriculture, are to form the basis of courses in marketing accounting at 26 colleges next year. These accounting systems have been prepared for use in country grain elevators and creameries. Their value has been demonstrated by 800 actual installations.

The bureau is preparing text material which will be available by the middle of December. It may be obtained by colleges free of charge for the first year upon application to the bureau.

Although at present the text material is confined to work in creameries and country grain elevators, the bureau of markets has worked out ssytems for other lines including cooperative fruit organizations, cooperative stores, livestock shipping associations and cotton warehouses. Bulletins on accounting systems for commission houses, cold storage warehouses and milk distributing plants are being prepared.

CITRUS IN SAN BERNARDINO COUNTY

San Bernardino's orange crop for 1919-20 will be approximately the same as the season just closed. This is the declaration of J. P. Coy, county horticultural commissioner, after a comprehensive survey of the citrus districts of the county.

A total crop for the county of 10,718 cars is predicted by Commissioner Coy. This is about 65 per cent of a normal crop.

The orange output for the county for the past season was 10,907 cars, nearly one-third of the total Southern California output, which is 35,326 cars to date.—C.

THE OLIVE CROP

San Diego County reports a very fair crop in all districts, while in Los Angeles County it will be larger than for many years past. On the Sylmar ranch in the San Fernando Valley, one of the larger orchards of the state, the crop is said to be unusually heavy, being about twice that of last year. Several hundred acres of these are top-grafted and about 200 acres of top-grafted are too young to bear. The crop in all parts of the state shows that the total output will be larger than last year but this will be due to the increased percentage of large sizes. As one goes north, Clovis, in Fresno County, reports a light crop, other parts of the county report normal or above. Corning and other parts of Tehama County report a good crop, mostly of Sevillanos.

WALNUT SHIPMENTS LATE

Due to the unusually large crop the 1919 walnut shipments will be the latest for several years. For example, the first carload in 1916 was shipped on September 11; this year the first car was shipped November 1. The big plant of the Santa Ana Walnut Growers' Association is running two full shifts, but as the crop is 115-120 per cent normal, delayed in harvesting by early rains and the warehouse so full of nuts that they cannot all be handled for two weeks, the officials are almost "nutty" themselves.

APPLE PULP UTILIZED

A news note from Oregon states that instead of being a liability the carting away of the pulp of the apples ground up at the vinegar plant at the cannery of the Eugene Fruit Growers Association is now an asset. Not long ago the association was compelled to pay $12 a ton to have the pulp carted away, but now it is being sold at the rate of $60 a ton. Manager Holt has an order from Missouri for a carload of this material. As the car will contain 30 tons it will bring $1800. The pulp is dried in the prune evaporator before being shipped.

AMERICAN LUMBER IN AUSTRALIA

Nearly all of Australia's lumber supply is hardwood and there is not sufficient soft wood for house building. In New South Wales, it is estimated the soft wood supply is sufficient only for six or seven years and the hardwood supply will last for 30 years. It would, therefore, appear that the market for Pacific Coast woods from the United States will be growing better in Australia. During 1918 the imports of lumber from the United States were: Sugar pine, 216,000 feet as against 3,669,000 in 1914; redwood, 7,444,000 feet against 20,305,000 in 1913 Oregon fir, 15,996,000 against 50,406,000 in 1914. It is thought the former importations will soon be equaled.

Australia has approved the importation of lemons and oranges from the United States to the extent of one-third the amount imported annually during the period from July 1, 1915, to June 30, 1918, or, at the option of the importer, one-third the amount imported during the war. Restrictions are: "Provided that citrus fruits are accompanied by an official certificate giving name of state wherein grown, stating the quantity and certifying: (a) that the fruit was grown in the specified state, (b) that in said state citrus canker does not exist; that the consignment is free from citrus canker and all other diseases. All plants belonging to a sub-family or tribe shall be understood to be included by the term citrus."

How the Experience of Years Saves Money in This Post-War Maxwell

THE run of 300,000 Maxwells to date saves you many a worth while dollar in the new Post-War Maxwell. Those 300,000 saved in many ways.

Maxwell

More miles per gallon
More miles on tires

1. They taught "short-cuts" in manufacturing.

2. They eliminated all experimental work—you don't have to pay for a single engineering mistake.

3. They developed quantity production which has reduced "overhead."

4. They enabled quantity purchases; and better materials are bought at lower costs.

5. They taught how to build an almost trouble-proof car; you seldom take a Post-War Maxwell to a repair shop.

6. They taught how to get the most mileage out of a gallon of gasoline, a pint of oil and a set of tires.

7. They taught how to build a car that the less skilled driver would find simple to operate and take care of.

8. They taught that it was better to build more and take less profit per car rather than build less and take more profit per car.

9. They taught how to put more and more value in the car without increasing its cost.

This Post-War Maxwell is next year's car. It contains features developed during the war, many of which will find their way into other cars in the summer of 1920.

Farm Loan Banks

THE farm loan bank is constitutional. This is according to a decision handed down by Justice Van Valkenburgh of Kansas City. The existence of this new farm credits system being threatened, notable legal counsel was retained by all parties to the suit. Former Secretary of the Treasury William G. McAdoo appeared for the government and the joint stock land banks. Former Justice Charles Evans Hughes of the United States supreme court appeared for the federal land banks. Former Attorney General George W. Wickersham also appeared for the joint stock land banks. Former Solicitor General of the United States William M. Bullitt and Frank Hagerman appeared for Charles E. Smith, who brought the suit to enjoin the Kansas City Title and Trust Company from purchasing bonds of the land banks, contending that the bonds were invalid by reason of having been issued without proper authority under the constitution of the United States.

Mr. McAdoo recited the story of the framing and passage of the law. Mr. Hughes and Mr. Wickersham made legal arguments as to the rightful powers of congress to create federal land banks and joint stock land banks and to exempt their bonds from taxation.

Mr. McAdoo, who was secretary of the treasury at the time the law was being framed, was able to present a graphic and highly interesting account of what was intended and what was actually done. He said that to provide money and credit for all classes of farmers was almost an impossibility up to the passage of the federal farm loan act.

From the first agriculture in America had suffered for want of money for both development and operation. Since the days of Hamilton the government had recognized the need and had sought continuously for a remedy. However, there were four angles to the problem which made the situation difficult to handle.

The very nature of banking, the safeguards which had to surround it if depositors were to be protected, made it difficult to extend to the farmer the kind of credit he could use. Because the banks had to keep their business in such condition that depositors could get their money any time it was impossible to make long time loans from current funds deposited with the banks. If farmers were to be given the kind of credit they needed and have enough time in which to work out and meet their obligations from their earnings, the money had to come from some other source.

Again in the very nature of things a bank could not lend the money of depositors without ample security. In other words, those farmers who most needed money had the least to offer as security. Therefore, it became necessary to create for them a kind of credit which farmers could use to advantage.

The banks could not spare from their deposits enough money in the aggregate to meet the needs of agriculture. Neither could they supply enough funds to afford any considerable relief.

Capital could not be induced to invest in agricultural securities unless these securities were made as attractive as other securities.

Therefore it was necessary to create a system of rural credits which should provide: Plenty of money, money on long time credit, money on liquid securities, money at a low rate of interest.

Accordingly the government borrowed from the experience of the commercial world and from the experiences of every civilized country of Europe and sought to use in the creation of a system of rural credits everything in these experiences that was useful and adaptable.

Bond issues had made corporate finance possible. Bonds made it possible for corporations to borrow money on long time credit. Bonds also made it possible for corporations to borrow money (because of the long time investment) at low rates.

Certainly if bonds had done this for corporations they could do the same thing for agriculture.

But the certainty of double taxation presented tremendous difficulties. The land being taxed once it was unfair to tax also the mortgage on the land. Furthermore, if bonds were to be issued against farm mortgages they would have to be sold on the market in competition with tax exempt bonds of municipalities. From this it was evident that if agriculture was to be given cheap money its bonds must be exempted from taxation.

So the government developed a system of farm credits which, with tax exempt bonds as the basis, thus provided plenty of money on long time credit and at low rates.

RELIABLE CONCERNS

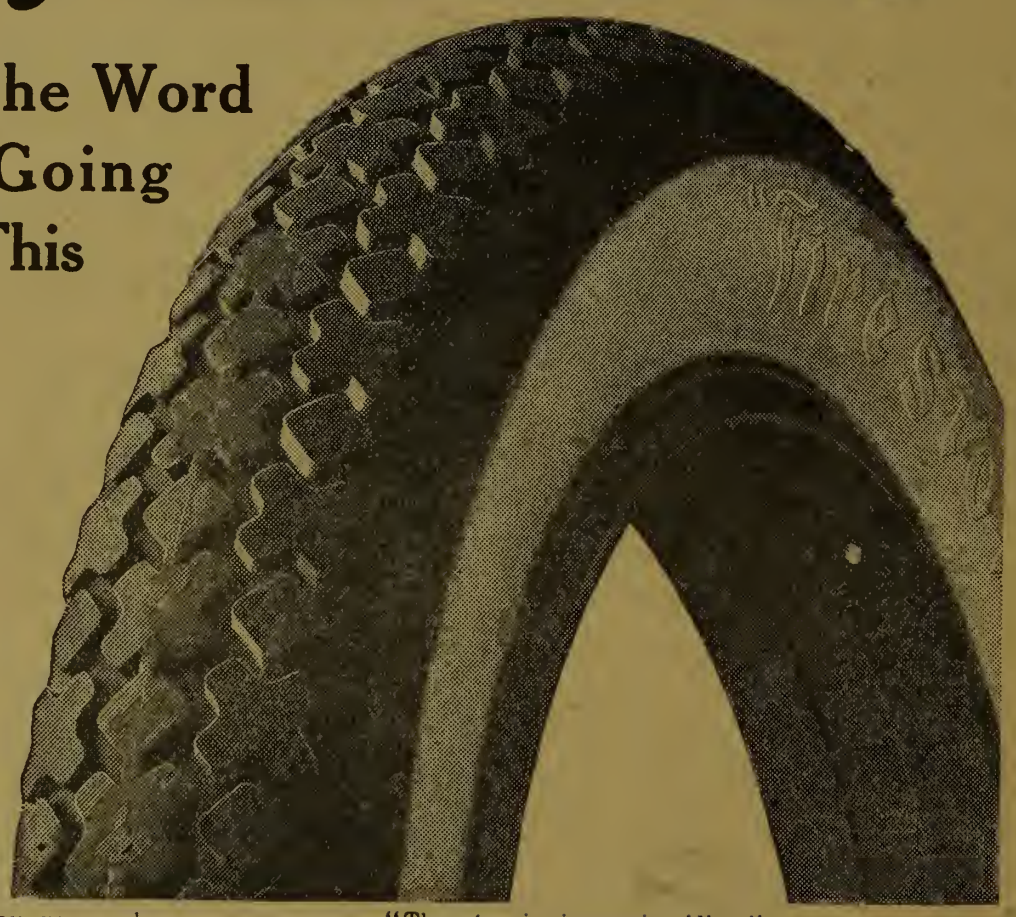
Subscribers to the Cultivator may have noticed on editorial page our guarantee as to the character of advertisers, and to the end that such guarantee shall be made good we have always used extreme care in admitting advertising into our columns. For example, we have consistently refused to admit advertisements of fake remedies—although their promoters are more than willing to pay the highest prices—while we do admit and recommend to our readers reliable prepared foods and remedies which have proven their value through years of use. The busy farm wife or poultry raiser finds it much easier—and usually cheaper—to keep on hand reliable remedies which are prepared by specialists who know their business than to try to put together—perhaps in an emergency when time means money—some home made decoction. The same thing is true of many sprays and paints; where used in small quantities or wanted in a hurry, it is found eminently more satisfactory to secure from the dealer all ready to use. The farmer may erect his forge and fashion his own plows, cultivators and other tools, but is not his time more valuable spent in producing food and is not the product of the factory more satisfactory than his own handiwork?

It pays to deal with reliable concerns, and the Cultivator feels that this is one of the greatest services it can render its readers—the maintaining of careful oversight over its advertising columns that only such concerns may appear.

Through a cooperative agreement between the United States reclamation service and the Arizona state land commission, the sum of $30,000 has been appropriated on a dollar for dollar basis for the survey of four possible dam sites for the storage of water for irrigation.

"Buy Firestones"

That's the Word That's Going Round This Year



WHEREVER you go you hear car owners passing the word—"Buy Firestones. They're the best cords this year." The reasons are many, but the conclusion is the same—Buy Firestone Cords.

Read these spoken advertisements for the New Standard Oversize Firestone Cord with Extra Heavy Non-Skid Tread:

"It gives me a lot more service than the mere guarantee."
"Not only fine service but a tire that looks right."
"The extra air gives easier riding."
"The non-skid tread is fine; it holds in all kinds of roads and yet there's no power wasted."
"I bought it because of its extra size and the Firestone reputation."
"You'll notice that you go farther on a gallon of gas."
"It steers easy and grips the road."

With the mouth-to-mouth tire advertising centered on Firestone this year no thinking tire buyer can afford to remain uninfluenced. See your dealer.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Commercial Value of Green Feeds

Will you be kind enough to inform me what is the price this season for stock beets and silage corn, both in the field and delivered at the dairy barn? I am raising these products for a dairyman who leases my dairy buildings, and it seems rather difficult to find quotations on same.—Subscriber, Anabeim.

We will pass this on to our subscribers who have had experience. What is a fair value in field for fresh cut corn for silage; also for pumpkins or other succulents? We know of one Los Angeles dairyman who is paying for green alfalfa, which was hauled away as rapidly as cut, $4 per ton, the buyer doing all the hauling. The dairyman thought the price should be around one-fourth as much for the green stuff as for the cured hay. One dairyman has told us that he feels that $8, under normal conditions, is full value on silage. The cost of cutting, hauling and placing in silo should of course be deducted. The same dairyman said that he had bought mangels at $1 per two horse load. He admitted that their real value was far above that figure but that the demand was low. Will our readers inform us how much they are giving or receiving for pumpkins, beets and soiling crops?

Pickers' Tags

What method do fruit growers generally employ in order to keep a correct and certain tally of how many boxes each picker picks?—Subscriber, Corning.

We believe the usual method is for the picker to have in his pocket a number of tags and as soon as he is finished with a box stick one of the tags on the edge of the box which is gathered by the loaders and tag handed to foreman who checks up credit according to the number of tags found. Some use small tin tags so bent as to hang on the edge of the box. Another method followed by some growers who have picking foreman is that each box as soon as picked is reported to foreman who inspects and hands check or tag to the picker who presents tags at the end of the day for total credit.

Volunteer Milo

I have three acres in dwarf milo and wish to know if it will grow a crop the second season after being pastured during the fall and winter. —Subscriber, Owensmouth.

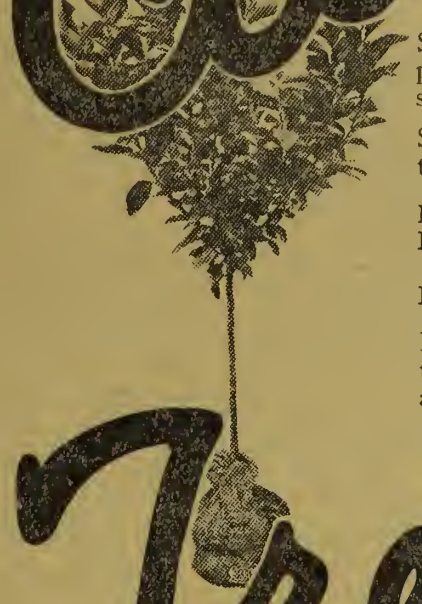
This question was referred to Prof. J. W. Gilmore of the state university, who writes:

"Regarding volunteering milo. This has never been successful in any part of the state where I have seen it attempted. It cannot be successful in any part where even the slightest frosts are prevalent, and even in those portions of the state where frosts do not occur the growth of the milo is so retarded during the winter that it does not recover in the spring. Normally milo is an annual plant, having no root stocks or other means of carrying it over from year to year. Consequently I cannot hold out any hope that such a practice will be successful in any part of California. I would much prefer to plant each spring for the sake of the invigorated growth and early development that will come from seedlings."

AMERICAN COTTON IN EUROPE

An American cotton broker just returned from a visit to Germany and what was Austria-Hungary states that Italy is the best Continental market for American cotton. Switzerland will need but 50,000 bales and German, Austrian and other manufacturers lack coal and capital and cannot buy and store in large lots as in pre-war days. Austria never was a good market for our cotton and as most of the mills are in Bohemia, now a part of Czechoslovakia, Austria proper will buy little.

Choice, Healthy
Citrus Trees



Selected budded stock—trees in perfect condition—the best that scientific culture can produce.

ADD MORE SIZE

prolificacy and early maturity to your herd. We are now offering some excellent young Poland China boars, correct as to type and breeding, that will add these good qualities to your herd. Pork producers will find these boars just what they have been looking for. Write immediately and I will send you full particulars. Prices reasonable.

Les McCracken *Ripon, Cal.*

TAKE NOTICE! THE HIGHEST PRICE paid for a car load of fat hogs at the California International Livestock Show came from the

BASSETT

Herd of Advance Type Poland Chinas

Many firsts, seconds, senior champion sow and GRAND CHAMPION SOW were won in the open classes, proving without a single doubt we are breeding the kind the packer wants and the farmer should raise. Animals of all ages, high class young boars, bred sows and gilts for sale at reasonable prices.

M. Bassett & Son **Hanford, Cal.**

Lakeside Defender

our junior Poland China herd boar is proving a sire of both quality and type. His get show his worth and we invite you to come to the farm and see for yourself. You'll like them as well as we do. Write for what you want and we will describe fully. Prices reasonable.

Geo. V. Beckman & Sons, Lodi, Cal.

What Counts?

More Pork or Show Ring Records—I raise Poland Chinas that produce pork quick—they are also show hogs—but first they must be prolific and mature early.

BIG MODEL FELLOW

my herd boar was reserve grand champion at state fair. He is the sire of the prize winning barrows. Write me if you want this kind.

J. F. McSwain **Merced, Cal.**

BRED SOW SALE FEB. 21, 1920

Blood Will Tell

In the show ring, in the feed lot or on the butcher's block. The Poland Chinas bred by me fulfill all these requirements. They make money for me and they will for you. My prices for good breeding animals are always reasonable.

Eugene Miner **Lodi, Cal.**

Golden West King

was such a superior type of a big Poland China boar that as a junior boar pig he was made GRAND CHAMPION BOAR at the California International Livestock Show. His litter mate, second to him in class was regarded by the judge as practically his equal. My winnings at the State Fair, Stockton, and at San Francisco, prove my claims for superior Poland Chinas. Eastern judges and breeders pronounce them the equal of any seen at the big eastern shows. I have these kind for sale at reasonable prices.

J. F. LEHMAN **LODI, CAL.**

How Pure Breeds Pay

Too frequently one meets the man who does not believe in the efficiency of pure bred livestock over grades, who figures that "all this talk about fancy bred stuff is poppycock." Such men refuse to apply common sense to their own business because of a deep rooted idea that they are "practical" men. These doubting Thomases are not confined to any one class, some are dairymen, some beef cattle operators, others run sheep and many feed hogs.

It is unfortunate that so many men should look upon pure bred livestock as something apart from their business, as playthings for the few, when as a matter of fact they should make the widest possible use of pure bred sires as a means for cheapening their production costs.

The possibility of increasing the efficiency of one's operations through the use of well bred livestock is so great and has been so conclusively proven time and time again that it would seem as though the demand should be infinitely greater than actually exists.

Take an instance or two, it would seem that every man who is running range cattle would follow some such a plan as has been worked out by the Pacheco Cattle Company on their ranch near Hollister. About 13 years ago when the present owners took over the property the quality of the cattle left much to be desired. No pure bred bulls had been used and the general plan was to market the steers as three year olds weighing around 1,000 pounds. In 1906 a start was made with pure bred bulls, Shorthorns happening to be the choice, and since that time only registered bulls have been used. The steers sold this year, three year olds, averaged over 1,500 pounds. In other words, in ten years' time the use of pure bred bulls increased the weight of the steers 500 pounds, or 50 per cent, and the manager, Mr. Hawkins, expects that the improvement will continue. Not only has the weight of the cattle been increased, but the quality has improved each year and buyers are eager to pay the top price. Can there be doubt that such results have been practical or profitable?

At the San Francisco Livestock Show a feature of the Jersey department was the exhibit of grade cows owned by J. W. Coppini of Ferndale. Coppini has been using pure bred bulls for a number of years and has succeeded in doubling the production of his herd.

Suppose every range outfit in this state followed the plan adopted by the Pacheco farm or that every dairyman used the method of Coppini. Isn't it reasonable to suppose that California cattlemen would have more money in the banks, and that, after all, is why men engage in business.

These mentioned are by no means isolated instances. Many men throughout the country are duplicating the results. They have no monopoly on the system. What they have accomplished others can accomplish. The point is that now is the time to make the start. Aside from the actual profits, the satisfaction of handling a better quality of livestock is an added reward to be obtained.—R. P. R.

Build Your Herd on a Sound Basis

During the last few months the writer has had occasion to attend a number of public sales of pure bred livestock and to visit the herds of many beginners. For the most part the sales and the visits to the newly established herds have afforded a great deal of pleasure and served to strengthen one's confidence in the belief that in the future California would be one of the truly great livestock producing centers. But there have been times when one could not escape the impression that not a few men just entering on a career as livestock breeders were operating without a well founded notion of just what they expected to accomplish. This idea has been gained from noting the apparently haphazard manner in which the foundation for the herd had been assembled.

There is this about the livestock business: the successful production of pure bred animals is a most intricate proposition. While a great deal of knowledge has been accumulated and handed down from generation to generation, there still remains a great lack of definite information. The limitations or possibilities of the business are but vaguely indicated by what has been accomplished. But the work of the master breeders has established one great fact—like usually produces like. It is upon this fact that most operations are anchored and most successful herds and flocks built. The statement that like begets like should not be assumed to be a fixed and proven formula like the multiplication table or a chemical reaction, for many variations occur and many conditions affect the problem, but it can be taken as a guide to successful breeding operations, keeping in mind that care and management are large factors.

If it be true that like usually begets like, then it obviously follows that superior foundation material will be more apt to produce superior offspring than inferior foundation stock, and if one has an ambition to go far in the breeding game he should first of all familiarize himself with the type of animal that is held in highest esteem and get thoroughly fixed in mind the ideal he expects to strive for. He should not expect to "beat the game" with inferior animals, except by a slow improving process in which sires superior to the females are used over a period of time.

Further, the chances for success are increased if, in general, the females of the herd or flock are uniform in type and blood lines and the sire is selected with care to have him above the standard of the females and of bloodlines known to "nick well" with those of the females. The founding of a herd along such lines presupposes that the beginner will give the problem much necessary thought and study before embarking upon his career. We are quite aware that not many herds are founded as suggested, but we do know that most of the successful herds have been and that fewer failures would be recorded if all were.

The sound plan, then, it seems to us, would be for the beginner first to thoroughly familiarize himself with the breed he proposes to handle, and through study, observation and consultation with older breeders learn the type held most modern and the bloodlines through which he can reasonably expect to produce that type. Once having grounded himself in those fundamentals he is in position to select intelligently his foundation material.

A study of the leading herds and flocks impresses one with the marked uniformity of type of the breeding herd and usually when the pedigrees are examined a similar uniformity of bloodlines will be noted—at least this is true of the herds noted for the uniformity of the young things produced year after year.—R. P. R.

BREEDING AND SPECULATION

Gambling is a world old vice that is so deeply rooted in the make-up of the human race that it presents a problem that will never be entirely eliminated, and it appears that there is no end to the devices or means by which those who like the thrill of taking a chance gratify themselves. But a protest should be registered against those who use pure bred livestock instead of any of more common devices, such as cards, stock exchanges, etc.

The above protest is made because there seems to be a growing tendency on the part of a few to regard pure bred livestock a fair means for accumulating speculative profits.

Tho Cultivator has no quarrel with the man who legitimately speculates in cattle, swine or sheep; neither do we have any sympathy for him when he loses if he has taken a long chance.

The pure bred livestock industry is a fundamentally sound business. The economic importance of better blood in improving the common stocks of the nation's livestock is capable of abundant demonstration. Under present conditions, with feed and labor costs at high levels, the problem that confronts every producer is how to cheapen his costs of production, and the general recognition of the possibilities of pure bred livestock in the matter of lowering production costs furnishes a real basis for the general expansion the entire industry is enjoying. If let alone the values registered will be true values, but if a few men attempt to capitalize this legitimate demand and force prices to excessive limits, fictitious values will be established, and fictitious values do not last, and in the crash that is inevitable much harm will be done. A bull or a cow, a boar or a sow, may occasionally be worth $10,000 or more, but to imagine that a large number will be worth such a figure is prima facie evidence of a lack of information that is astonishing.

We read of a litter of pigs that sells for $17,000—and with due regard to the facts we wish to go on record by saying neither that nor any other litter was worth such a price, save as a speculative venture.

We read of other extreme sales and in reference to them we say that the prices recorded were too high.

So far, in this state there has been slight indication that values will get on a speculative basis, but occasionally a straw points that way. When a spring gilt sells for over $3,000 and her litter mate sells for $150 or even $300, there is something radically wrong with values or the method of establishing values.

There is absolutely no reason for speculating in pure bred livestock of any breed. The field here is large, the real breeders are willing to pay good prices and the farmers and ranchers of this state are willing to set legitimate values. The ranchers and farmers of California are not, however, willing to set values beyond the true worth of a sire or dam.

Let California breeders keep values on a sound basis; let them recognize the worth and possibilities of better breeding—but let them also recognize the limitations.—R. P. R.

Save Barnyard Refuse in Compost Heap

The compost pile is a fertile source of valuable material for replenishing the plant food supplies of the soil. Proper utilization of the compost saves much fertilizing material which ordinarily is wasted on the average farm. The expense of making the compost heap is slight as compared with the fertilizing value of the resultant material. The essentials are to equip it with a watertight foundatioon by puddling clay. This is done by spreading the clay 10 to 12 inches thick and then moistening and trampling it thoroughly. A framework of logs or lumber should be built up around the pile and increased in height as the compost heap is built higher.

A layer of leaves, straw, grass, or even weeds, about 18 inches in depth, should be placed over the clay foundation. Above this a layer of manure five or six inches deep should be distributed, and if raw rock phosphate is available, from 50 to 80 pounds should be scattered broadcast over the manure. Then another layer of manure should be added and the process continued. It is essential to keep the pile of refuse moist by sprinkling it frequently. It is also necessary to keep the compost heap well packed and tramped. Ordinarily it takes about a year for the stable refuse in a compost heap to rot sufficiently for use, when it should be spread on the land in the late fall. Thereupon another pile should be started. The fundamental value of the compost pile comes from the fact that the manure is thoroughly rotted and its plant food content is in excellent condition for immediate soil use when applied to the fields, while during its period of decomposition it is maintained in excellent condition to resist leaching and weathering.

Good Cows Need Good Feed

Bossie is one of the champion consumers of the universe, according to results of studies of the United States department of agriculture and Purdue University in the neighborhood of Porter County, Indiana, where Uncle Sam kept tab for two years on the food requirements of about 368 cows that were producing market milk for Chicago. As cow living expenses have increased proportionally to those of the human family, these results are notable as an index to which the average dairyman or the owner of a family cow can refer in "doping out" the menus and amounts of feed which his animal or animals require.

The grand average maintenance and production ration for the good grade cow yielding about 7,000 pounds of milk a year included 2,046 pounds of grain, as well as 3,301 pounds of hay and corn stover, 7,276 pounds of silage, and 720 pounds of straw for bedding. The average cow required a little less than one and one-half acres of good pasture to furnish grazing for six months of the year. To keep her in proper condition and to milk and feed her regularly required 164.5 hours of human labor, as well as 16.2 hours of horse labor to haul the milk.

The studies in Indiana showed that the annual overhead charges for Bossie aggregate $27.11, inclusive of the interest, depreciation and taxes on buildings, cattle and equipment, as well as miscellaneous expenses such as provision and maintenance of cans, pails, dippers, shovels, forks, scoops, lanterns and the like, medicine and veterinary costs, fly sprays, gas engines, windmill and milk wagon repairs and similar items. The cost of bull service, tuberculin testing and cow testing are also included.

The tests show that a calf crop of approximately 87 per cent is usually raised, so that each cow is credited with the production of 0.87 of one calf, as well as the providing of 6.8 tons of manure, which is hauled to the fields as fertilizer.

Massed together under one roof, the grain and coarse feed which Bossie will eat in one year would fill a small barn. Generally speaking, high production of milk is closely associated with a large and healthy cow appetite, and the dairyman who closes his accounting records at the year's end with the maximum net return is the man who provides the greatest variety and a proper mixture of the goodies of the cow world for the bossies of his herd according to their individual production and capacity.

Young Boars and Gilts

sired by Long Jumbo and Yates' Big Orphan. Poland Chinas of correct type and breeding. I guarantee them to please or refund the purchase price. Prices very reasonable. Write for description.

MERITT-BOWERS SALE

The Tagus Ranch near Tulare will be the scene of another great public sale of livestock and farm equipment on Tuesday and Wednesday, December 16 and 17, when the Meritt-Bowers Company will put up at auction 130 head of beef cattle and 75 head of registered and unregistered horses, jacks and mules, and hundreds of farm implements such as have been used for a short season on one of the great farms of the West.

The Meritt-Bowers Company has decided to hold two public sales a year, spring and fall, making this ranch the market place for farmers of the West seeking pure bred livestock and modern implements for all kinds of farming. The sale last December was one of the most talked of events of the kind ever held anywhere in the country.

The offering this fall will consist of 100 head of registered Shorthorns, 20 of which are of milk strain breeding. Many of the Shorthorns are either sired by or in calf to Knight Avon 2nd, the great bull bred by Dean C. F. Curtiss of Ames, Iowa, and sired by Count Avon by Avondale and he by Whitehall Sultan, a bull around which much Shorthorn history has been written. The Shorthorns present a pretty picture in the great corrals of the Tagus Ranch and are offered in good range condition.

The 30 head of two year old Hereford bulls are a product of pure bred animals on both sides, but being range raised stock the breeding records were not kept up so will be an attraction to range men only.

It has been many years since the number of quality registered drafters has been put up at auction that are offered in the 15 head of Percheron, Belgian and Shire stallions and mares. The Meritt-Bowers Company show string of drafters was one of the attractions at all the fall fairs.

Ord L. Leachman of Sacramento has been engaged to auctioneer and manage the sale, and promises two days of rapid selling.

GLIDE SHORTHORN CHAMPION AT PORTLAND

Little Sweetheart, the sensational two year old Shorthorn heifer owned by Thornton S. Glide, Davis, has added another to her unbroken string of championships by winning top honors at the Pacific International Livestock Exposition held at Portland. Glide has entered Little Sweetheart in the International at Chicago next week, and Western Shorthorn breeders confidently expect that she will be well up in that great show and thus add to the fame that California is winning each year at the greatest livestock show of the world.

Grand Champion at California International

King Morco Alcartra, grand champion Holstein bull, owned by A. W. Morris & Sons Corporation, Woodland.

WATSON TO MANAGE PALO ALTO STOCK FARM

The pure bred dairy cattle interests of this state will be interested to know that Ralph E. Watson, formerly with the Henderson Company, Sacramento, has accepted the position of manager of the Palo Alto Stock Farm, Palo Alto.

The Palo Alto Stock Farm is one of the largest breeding establishments on the coast, maintaining large herds of pure bred Holsteins and Guernseys on the 4,300 acres operated. Watson is one of the best known livestock men of the Sacramento Valley and he takes to his new work experience and enthusiasm that will no doubt place the Palo Alto Stock Farm in a leading position.

FORAGE PLANT SEEDS

During the four months ending with October the United States imported 4,003,700 pounds of alfalfa seed, more than that amount of crimson clover; 3,008,300 pounds of red clover; 2,446,200 of alsike clover, and far lesser quantities of clover and grass mixtures, rape, timothy, redtop, millet, broom corn and vetches, the lightest importation being of broom corn, of which we received but 100 pounds.

A. J. Elliott and H. C. Shinn of Tulare, owners of the big Poland China boar, The Californian, which has attracted so much attention at shows this year, carries the blood of The Pilot, grand champion at the National Swine Show at Des Moines. The boar was sired by Macs Big Orange of Colossal breed and is closely related to The Pilot on the dam side.

J. Cook of Paradise, Butte County, sold 25 head of pure bred Poland China hogs for $3,700.

Going East to Buy

During January and February I will attend a number of Poland China sales in the east and central west. Am going to buy some for myself and will be pleased to act for you. Send for circular describing my trip and plans in full. A number of buying orders already booked so write me at once.

W. T. Dice, Hanford, Cal.

ARNOTT & COMPANY, Inc.
112 S. Los Angeles St., Los Angeles

50 Utility Shorthorns 50

at Public Auction

State Fair Grounds Sacramento, Cal.

Thursday, Dec. 11th

from the

W. C. Short Herd, Reno, Nev.

For this sale which is the initial sale from one of the oldest established herds in the West, the owner has carefully selected a choice lot of well bred, useful young cows, heifers and bulls that he feels sure will be appreciated by those in the market for registered cattle at conservative prices.

The policy of the herd has long been to raise cattle of a character that experience has demonstrated can make good under Western conditions. The females have been selected because of thick fleshing and good milking qualities. The herd bulls that have seen service in the herd have invariably come from the leading Western herds and have been selected for beef, scale, bone and constitution. The young things have in no way been pampered and as they will appear sales day will be real proof of the acknowledged beef making qualities of the Shorthorns.

All the catalogued lots are guaranteed to be breeders, have been tuberculin tested, and are good deep reds.

1111 Seventh St **Sacramento, Cal.**

SUREMILK

"A Sperry Product"

The Feed That Tells In The Flow

Your cow, to produce a full flow of milk the year 'round, requires a feed with *five times* as much carbohydrates as protein. Take alfalfa hay, for example. For the amount of protein it contains, alfalfa hay has only half as much carbohydrates as it should.

What your cow needs to make her a really profitable producer is SUREMILK—

A highly concentrated grain feed

It is rich in carbohydrates—containing nearly 64 per cent. It is very low in moisture, ash, fibre and protein—for alfalfa hay or other roughage will supply these more cheaply.

Remember this: just as alfalfa hay is the ideal roughage, so SUREMILK is the ideal grain concentrate. *Together,* they enable the cow to produce the greatest amount of milk with the least drain on her vitality and the least strain on your pocket-book.

MEAT PRICES

The Nebraska Farmer discusses the matter of producers and consumers prices editorially under the title of "Hog and Pork Prices," as follows:

We learn from figures published by the United States bureau of markets that hogs declined during the month of August from $22.25 a hundred to $17.80 a hundred—a drop of $4.45.

Figures from the same source show that the wholesale price of pork loins at New York advanced approximately $4 per hundred during the same period and at other points the lowest advance showed $2.50 per hundred.

It would thus appear that while the packers were paying $4.45 less per hundred at the end of the month than at the beginning, they were getting from the retailer $2.50 to $4 a hundred more for pork loins. We are informed by a representative of a packing house that the main part of the fresh pork marketed by the packers consists of pork loin. The rest of the hog is made into smoked ham, smoked bacon, dried salt pork and lard. The pork loin is perhaps 20 per cent of the weight of the hog and recently has been selling at higher prices than the other products.

The packers claim that a grave injustice has been done by mentioning the soaring price of loins and not mentioning the fact that the other products of the hog fell in price. An investigation shows that the four products mentioned fell in price about in proportion to the fall in price of live hogs, but that pork loin rose in price in spite of the drop in the price of live hogs. Just recently loin prices have been falling some. This may be due to the publicity given the matter.

And now come the packers with explanations as to why hogs have made such a big and sudden drop. They give only two reasons. The first is that foreign demand has practically disappeared and the second is the agitation against the high cost of living carried on by the government and the report of the federal trade commission and the attorney general against the packing industry.

We find it difficult to make statements issued by the packers harmonize. A short time ago we were told by one of the packers that there would be an unlimited European demand for pork products for years to come. This in itself assured high prices, he said. And now we are told that the foreign demand has disappeared. The reason given by the packers for this disappearance is that the price is so high that the European countries cannot afford to buy.

The second reason is merely a continuation of the plan of the packers to induce the public to oppose any federal legislation. They wish to center our attention on the disastrous decline in hog prices so that we will give no attention to the bills now before congress designed to regulate the packers.

We would like to hear some other reasons. We believe that these alone cannot possibly account for the tremendous and disastrous drop in hog prices, unless back of them should chance to be a reason that there is somebody who could put the prices down or up at will. The fact that the winter packing season is just about to begin may have something to do with the drop.

BARLEY VERSUS CORN AS A HOG FEED

With corn at the present high price hog feeders are trying to find a good feed which can be purchased more cheaply. Barley costs less per pound and hence is being used by a large number of feeders. The University of Missouri college of agriculture has results from a recent feeding trial which indicate that barley makes a very satisfactory corn substitute.

Twenty hogs, averaging in weight about 130 lbs., were divided into two lots of ten hogs each and full fed for forty-nine days. Lot 1 received ground corn nine parts, shorts two parts and tankage one part, while lot 2 was fed this same ration except that ground barley was substituted for the corn.

At the end of the feeding period the hogs fed corn had gained an average of 1.93 lbs. per day, while the hogs fed barley gained an average of 1.85 pounds. Thus the hogs getting corn

I've Saved Enough Time Since I Installed a
LOUDEN Litter Carrier
"To Pay For It 3 Times Over"

That is what one dairy farmer recently told us. And time is not the only factor in cleaning a barn. Shoveling manure every day requires man-power and means labor. A Louden Carrier will save the labor of at least one man. Makes the barn cleaning easier, cuts labor, cuts cost.

GUERNSEYS

Butter Fat at Lower Cost per lb.

No other breed can produce rich golden butter fat as cheaply as the Guernsey. Official yearly records show—one cow has given 24,008 lbs. milk and 1,098 lbs. butter fat. Write for our free booklets.

QUALITY ECONOMY QUANTITY

The American Guernsey Cattle Club,
Box C 40, Peterboro, N. H.

gained more rapidly, but they also consumed more feed.

Lot 1 (corn, shorts and tankage) gained 100 lbs. on each 409.9 pounds of feed, while lot 2 (barley, shorts and tankage) required 426.6 pounds of feed for 100 pounds gain. In other words, for each 100 pounds of pork produced about four per cent more of the barley ration was required than of the ration containing corn.

These results are inside the allowance usually made, namely that ground barley has about 10 per cent less value than corn as a swine feed.

Owing to its hard flinty covering barley should be ground or rolled for hog feeding purposes. Since its composition is very similar to corn, like corn it should be supplemented with feeds like shorts, tankage, linseed oil meal or milk by-products.

WHAT IS A TON OF MANURE WORTH?

Trials made on the various experiment fields throughout the state by the University of Missouri college of agriculture have shown that an average application of eight tons of manure to the acre once in four years has increased the yield of corn 10.5 bushels, oats 5.17 bushels, wheat 5.24 bushels, and clover hay 937 pounds. At prices which prevailed the first of the year this increase would be worth $4.83, and at pre-war prices $2.34, for each ton of manure applied. It will cost the farmer not more than one dollar a ton to collect the manure and haul it to the field. This would leave a net profit of $3.83 at present prices, or $1.34 at pre-war prices, for each ton of manure applied. The full value of the manure is usually not obtained during the first four years, for it leaves the soil in better condition and its effect upon later crops is often quite significant. This becomes more noticeable after the first two or three applications, since a liberal application of manure every four years will result in permanent improvement to the land.

By very careful handling of manure a livestock farmer on average soil should be able to return annually about two tons of manure per acre to his cultivated fields. It is not easy to save this amount except by very careful methods and persistent effort. It is necessary that all straw and other suitable materials be worked through the barns as bedding. This not only adds to the comfort of the animals but serves as an absorbent for the liquid manure. If straw piles are sold, burned or left to rot it is of course impossible to return this amount of manure.

Keep the manure together; don't let it get scattered about the barn or lots. Hogs and chickens may waste much of it. Where possible haul it to the field as soon as produced. If this is not possible store it in shallow concrete lined pits to prevent leaching. Use plenty of bedding in the stable or on the feeding floor to absorb the liquid. Straw, old hay, grass and leaves may be used for this purpose.

About 35 per cent of the nitrogen and 55 per cent of the potassium is to be found in the liquid material. There is, however, practically no phosphorus in this part. The plant foods in the liquid are all in soluble form and are very easily lost through leaching. Furthermore, the nitrogen in this liquid portion readily passes off as ammonia when the manure is allowed to ferment, hence the necessity for preventing fermentation as far as possible.

The total solid and liquid manure produced in a year by a well fed, mature horse is about eight tons, with a plant food value of more than $30. In the case of a well fed steer weighing from 1000 to 1200 pounds the production is nine to 11 tons, with a slightly greater total value than the the manure from a horse.

Three to five months exposure to the weather in an open lot may cause manure to lose approximately one-third of its plant food. If manure must be exposed to the weather it should be in a pit with a water tight bottom.

The 1000 lb. Sale

Every female in this sale has a 1000 lb. yearly butter record, is out of a 1000 lb dam, is by a 1000 lb. sire, or is bred to a 1000 lb. bull

No other sale of registered Holsteins ever held anywhere in the world has closely approached this one in 1,000 pound yearly butter record breeding.

70 Young Registered Holstein Cows and Bulls

at Public Auction for

A. W. Morris & Sons Corporation

(Woodland, Cal.)

State Fair Grounds, Sacramento, Cal.

Thursday, December 18, 1919

Fire destroyed the big cow barn, the season's crop of alfalfa hay, a large quantity of mill feed, and the four large silos, on A. W. Morris & Sons Farm, early in November. An immediate reduction in the size of the herd must be made, and a large number of great females will be sold that ordinarily would not go out of the herd at any price.

A very considerable percentage of the females are three and four year olds, mostly daughters of the great yearly record bulls that have been bred and developed in the Morris herd, representing the breeding that has made the herd famous the world over.

Every female in the sale will either be fresh or bred to one of these three bulls: SIR AAGGIE DE KOL MEAD, son of the 1,100 lb. 3 year old heifer, Miss Valley Mead De Kol Walker; KING MORCO ALCARTRA, son of the world's greatest dairy cow, Tilly Alcartra; KING AAGGIE MEAD, son of the 1,000 lb. cow Aaggie Acme of Riverside, and full brother to the world's strictly official yearly butter record cow, Aaggie Acme of Riverside 2nd.

Bulls in the Sale

Every bull of service age in the Morris herd, except the herd bulls, will be sold in this sale. There are only ten of them, and buyers who expect to secure a service bull from the Morris herd this year will need to be on hand at this sale. Every one of them is by a 1,000 lb. sire or by a sire that has produced a 1,000 lb. daughter.

Prince Walker Cornucopia

The Highest Record Son of Prince Gelsche Walker

His dam ALBA SADIE CORNUCOPIA CREETA has just completed official records of 36.26 pounds butter from 516.7 pounds milk in seven days. Her previous records were as follows:

At seven years—
Milk 338 days 13,849.40
Butter 866.23
At six years—
Butter seven days 34.13
Milk 532.40
At five years—
Butter seven days 28.85

She is a daughter of Sir Sadie Cornucopia, son of the first 30 pound cow, Sadie Vale Concordia.

Over 60 of our best females are bred to **PRINCE WALKER CORNUCOPIA**, and he will be given the fullest opportunity in this herd. Put one of his young sons at the head of your herd.

We Can Spare One of Our Service Bulls

AND OFFER

KING WINNIE SEGIS WALKER, (No. 244437), born November 16th, 1917. (Just in his prime.)

SIRE—"KING WINNIE," a show bull, whose dam has produced 31,034 pounds of milk in a year and made over 1,200 pounds of butter in a year.

DAM—"ALLENVAIL SEGIS WALKER', 7 day record—at 4½ years old—447.90 pounds of milk and 22.71 pounds butter.

She is a daughter of "KING WALKER SEGIS"—28 A. R. O. daughters—and her dam is a granddaughter of two of the greatest bulls of the breed, "KING SEGIS" and "HENGERVELD DE KOL." As an individual this bull will satisfy anyone. He is straight and right in every way.

If you are in need of a service bull for either a grade or purebred herd, do not overlook writing for photo, price and extended pedigree. We are offering him very reasonably.

The Cows for the Working Farmer

Always on the job to produce for profit, not to run up excessive feed bills—that's Jerseys! You feed a Jersey for her udder. She can make a dollar's worth of feed go farther and yield a greater return than any other breed. Her milk averages 5.37% butter fat. The market pays more for Jersey milk, Jersey butter, and Jersey cheese.

If you want Pride-Prize-Profit cows, don't hesitate—get Jerseys. Let us send you "Profitable Facts about Jerseys." It is a free booklet with hundreds of valuable points and information.

H. D. McCune, Lemoore. one of California's popular Poland China breeders and a member of Kings County Poland China Breeders Association, announces that he will hold a public sale of big type Poland China swine in Hanford, Saturday, January 24. Mr. McCune is using as herd boars Kings Massive Orange, grand champion at the last Fresno fair, McCune's Buster by Giant Buster. and a son of Surprise Prospect. In this sale there will be 30 daughters of Kings Massive Orange bred to McCune's Giant Buster. the Surprise Prospect boar, The Californian, by Mc's Big Orange, The Yankee Jr. and other noted boars, as well as animals sired by Lendorris Liberty Bond, The Yankee Jr., The Californian, Kings County Buster, Wondergerst, Kings Big Bone Leader and Young Jumbo. Also included in the sale will be a young boar and gilt by Suprise Prospect out of Edith Rose and litter mates to the gilt that sold for $1,250 in the last consignment sale of the Kings County Poland China Breeders Association. Mr. McCune states that it is his ambition to make this sale one of real class and quality and it will in every way be of credit to the breed.

Chas. Gatewood of Fresno will in January disperse his entire herd of Poland Chinas, including the 1919 grand champion boar Giant Bob. For some time Mr. Gatewood has been in poor health and for this reason he has decided to sell all his hogs, lease his ranch and for a time retire from active work. Last spring he made a trip through the central west, selecting a car of Poland Chinas for a foundation herd with the view of forming one of the great herds on the coast. He secured a sufficient number of animals that would have permitted him holding a sale this winter and at the same time reserve a number for his own herd. Poland China breeders will learn with regret that poor health necessitates the retirement of Mr. Gatewood from the ranks of the state's Poland China breeders, but no doubt will appreciate the opportunity offered in his forthcoming sale. The sale will be held sometime in January, probably between the 20th and 30th of the month. Much speculation is rife as to who will be the new owner of Giant Bob.

W. T. Dice, one of Kings County's leading Poland China breeders, is planning an extensive trip through the East and will visit a number of the leading Poland China breeders as well as attend a number of the sales that will be held during January and February. Mr. Dice will purchase a number of animals for his own herd and has been commissioned by a number of breeders to secure stock for them.

Marshall and Son, Poland China breeders of Sebastopol, have added to their herd Mouw's Special 7th, a 14 months old boar by Mouw's Special.

The large number of sales of swine scheduled for the first three months of the coming year makes a good many wonder if market conditions of the state warrant so many offerings. Some 25 or 30 sales are already announced with others in prospect, and it's to be hoped that they will be met with a hearty response. A strong effort should be made to get the farmers interested in the communities in which the sales will be held, as this is the real reason for holding public sales.

The Poland China Breeders Association of Fresno County held what they termed a mixed sale on the Fresno fair grounds November 19. While a number of good bred sows were offered, it consisted mostly of young gilts and young boars. The top of the sale was the sow Blue Valley Lady B., consigned by Chas. Gatewood and bred to the grand champion boar Giant Bob. She was purchased for $300 by J. S. Rogers, Chowchilla. A. Buckland and Son sold the gilt Ruby's Daughter, bred to Blue Valley King, for $225 to Mason and Sherwood, Sanger, while Walter C. Ficklin sold the open gilt Hadley's Beauty with the breeding privilege to his new boar Fresno Evolution, a son of Evolution,

A Grand Champion Poland China

Poland China boar, grand champion at the Los Angeles Livestock Show, owned by Mrs. Viola Renwick, Santa Barbara.

C. B. Cunningham of Mills writes that he is now offering for sale every animal of the Billiken herd of Chester Whites. This includes aged boars, young service boars, bred sows, gilts, in fact everything. Mr. Cunningham has some of the finest of the Whites and this affords rare opportunity to their admirers.

The Burr Farm, Los Angeles, reports that the grand champion cow at the Riverside fair, Durmelia 2nd, and Duchess Orndyke Sadie Vale, winner of first yearling and junior champion at the Los Angeles Livestock Show, are both now on official test. Durmelia 2nd as a ten year old made in seven days 697.7 pounds of milk and 23.12 pounds of butter 30 days after calving. She is going right along milking about 100 pounds of milk a day. Duchess Orndyke Sadie Vale at 22 months old made 396.8 pounds of milk and 18.14 pounds of butter in seven days. Another cow in the herd, Roderick Netherland 2nd, made 594.5 pounds of milk and 19.8 pounds of butter in seven days. We have just closed a ten months' test on the two year old heifer Fidessa Candida Burke De Kol, and she has produced 11,512.2 pounds of milk containing 509.85 pounds of butter in 305 days. She will freshen again in the early part of December.

R. F. Guerin, Holstein breeder of Visalia, writes that he has just completed a seven day test on Glendora of Sunnyside. She making 23.10 pounds butter. She is a junior two year old and a daughter of Sir Veeman Korndyke Pontiac, a son of Sir Veeman Hengerveld who has 117 A, R. O. daughters, 18 of them making over 30 pounds of butter in seven days. This is the second daughter of Sir Veeman Korndyke Pontiac to make 20 pounds of butter in seven days as a two year old. There are 28 more daughters of Sir Veeman Korndyke Pontiac in Sunnyside herd to freshen soon, and if they all do as well he will be a sire of note.

In a recent letter from A. Buckland and Son, Poland China breeders of Fresno, they write: "Our sales for the past week have been three December gilts to the Kern County pig club boys; one service boar to R. C. Whitworth, Hanford; one service boar to Frank Schofield, Fresno; five March gilts to Madera high school pig club boys; five September sow pigs and one boar to Madera County pig club boys; one service boar to Fred Wheaten, Helm. We have a fine litter out of Lady Progression 3rd sired by Liberty Bond, that is coming in fine shape. Our Hawk Eye Giant gilt that we just purchased from I. J. Conrad, Melbourne, Iowa, is to be bred to Orange Boy and we are expecting something great from this mating."

Allen Thompson of Tulare and Joe Chenowth of Visalia, joint owners of Lord's Orion Cherry King, a prize boar shipped by them from Indiana last year, have sold the animal to Way and Lamb of Modesto for $500. Mr. Thompson, whose herd was sold almost entirely to the Boston Land Company of West Haven a short time ago, has purchased a number of animals from the Thorp herd at Stockton and will continue breeding.

Built to meet the work—not to meet a price

Sowing Success

FARMERS who use the Twin City "12-20" are Sowing Success. This tractor is designed and built to work on schedule as dependably as a fine watch keeps time. For Twin City engineers have built into it every element of reliability.

The 16-valve motor, valve-in-head type, burns *all* the kerosene that goes into it, so complete is the clearing due to the double valve capacity. And the power delivered gives a surplus far beyond the rating.

Just as the 16-valve design guarantees its economy of operation, the construction assures steady service for a generation. The cylinder sleeves are removable—reboring never necessary. The "whip" of vibration is reduced to harmlessness by the finely counterbalanced crankshaft, drilled for force-feed lubrication.

The transmission, mounted on Hyatt roller bearings, runs in a bath of oil. It uses only 3 reductions to deliver the power at the drawbar. The gears are machined to absolute accuracy, and heat-treated.

On motor and transmission mainly depend the life and service of the tractor. But every part of the Twin City "12-20" is designed and built up to the same rigid standards of excellence.

Semi-Solid Buttermilk

Makes 'Em Grow Fast

Feed your hogs and poultry semi-solid buttermilk. It keeps them healthy and gets them to market earlier.

Semi-solid buttermilk is pure creamery buttermilk, with nothing added—only the water is taken away. It is not modified by the addition of sulphuric acid or any other preservative. Its own NATURAL LACTIC ACID keeps it fresh.

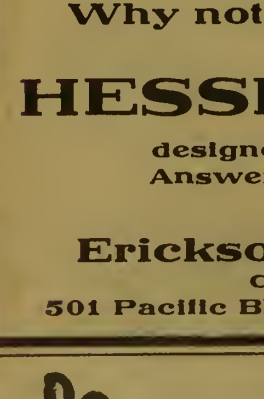
We Guarantee Every Barrel of Semi-Solid Buttermilk.

We guarantee that semi-solid buttermilk is pure and unadulterated, sterilized and pasteurized. It is a SAFE feed, and you will be satisfied with the results from feeding it.

Saves Grain, Saves Time, Saves Money

Saves GRAIN, because it balances the grain ration. Saves TIME because hogs and poultry fatten quicker when fed semi-solid. Saves MONEY because you don't pay freight on the water content of the buttermilk, and you don't have to feed so much high-priced corn.

Semi-Solid Buttermilk Is Essential



for BABY CHICKS; raises every one; keeps them healthy and vigorous. No sickly or dead chicks.
TRY IT.

FOR LAYING HENS—The egg production increases at an astonishing rate. Keep accurate account, and TRY IT.

POULTRY FOR MARKETS—Milk-fed chickens reach market first, with choice, firm, white flesh. TRY IT.

We know what SEMI-SOLID BUTTERMILK will do. Don't be skeptical, but try it, to be convinced.

A carload per week is consumed in the Petaluma District alone.

Semi-solid buttermilk is put up in 500-lb. barrels, half barrels, quarter barrels and 10-gal. kegs. Have buttermilk when you want it. Semi-solid keeps in any climate, any length of time.

Order from your dealer. If he can not supply you, send your order to Dill-Crosett, Inc., 235 Pine St., San Francisco, and we will supply you direct from our factory at Benicia, California. You pay on receipt of the goods.

The Problem of Fertility

By Jean A. Koethen

WHOEVER attempts to discuss the subject of fertility may as well admit at the beginning, with Portia, that it is far easier to say what ought to be done than to do it. Why is it that in the same pen one hen lays fertile eggs and another does not? Why is it that some seasons all the breeders talk about "rotten fertility" and one is lucky if he gets six chicks from 15 eggs? Why is it that the more highly bred our birds are the fewer fertile eggs (very often) can they be induced to lay? If I could answer all these questions and the hundred others that clamor to be answered I should be very proud indeed. As it is I can only make a few suggestions that may prove helpful to the beginner who perhaps fondly imagines that all he has to do is to put a male bird in the pen with 10 or 12 females and the thing is done.

This whole train of thought was suggested to me by a breeder at the Riverside show, who complained of the poor fertility last spring, blaming that for the small number of young birds that were ready to be shown in October. He and a good many others lay the poor hatches to the unsatisfactory ration our hens have had to endure now for several years. One breeder last spring, I remember, blamed the large amount of barley that has been fed for the poor hatches that came from both incubator and hen. Is it true that feeding influences fertility? If so, to what extent, and is there any way of overcoming this influence in such a time as we are passing through when unsatisfactory feeds must be used?

Causes of Infertility

Fertility, we must first fully understand, is not obtained by any one factor. Just as death so often is brought about by a "complication of disorders," so infertility arises from a complication of circumstances, some of which we see and understand, some of which we may never understand. One of the lecturers at the poultry school last spring named the following as contributing causes of infertility: Breeders of low vitality, too old, too young or too fat; lack of exercise; insufficient green feed; too many females to one male; confinement in too small yards.

Analyzing these causes we find they may be classified under the headings: constitutional vigor, environment, feeding and mating. Failure in any single one of these particulars, though all the rest are perfect, may produce infertile eggs. If hens are overfat, for instance, that is reason enough. If the male is mated to 15 hens when he can care for but ten, that is reason enough. If the ration is not right, that again is sufficient. If we can find no other reason, we can always explain infertility by those magic words, "low vitality," or "lack of vigor," for vitality and vigor are something that can neither be seen or otherwise apprehended. That is why this matter of fertility is so slippery. Always as we think we are about to grasp it, it slips away. No matter how perfect environment and feeding may be, it still eludes us on the score of vitality.

Breed From Hens

After all, small as our knowledge is there are still things we may do to encourage fertility. Whatever increases or conserves the health and vigor of the breeders ought to make them more able to pass on that vitality. Exercise is certainly necessary to health, and confinement in small yards is to be condemned because it discourages exercise. Age is important because it affects vitality. The immature hen has not the vitality of a two-year-old, hence we are told not to breed from pullets but to reserve the mature hens for breeders.

The male, it will be noticed, matures earlier and deteriorates sooner as a breeder than the female. I have had good fertility when the male was a cockerel of seven months, and ten months is old enough for all breeds, except perhaps the Asiatics. On the other hand, a cock of two years is often, perhaps usually, past his prime. The mating that is generally preferred is that of a cockerel of ten to 12 months with two-year-old hens. The hens are fully mature while the cockerel has the vigor of youth.

The number of hens to be used with one male depends largely on the season and to some extent on the breed. A White Leghorn cockerel in the spring may be able to take care of 20 hens when in the summer 15 is sufficient and in the fall not more than ten or 12. An Orpington should not be mated to more than 12 hens in the spring and eight in the fall. Indeed, a successful Orpington breeder once told me that if I wanted really fine birds I should mate but four hens to a male. We are speaking, however, of fertility, not quality.

Possibly some will take exception to what I have just said about number in matings. If they do I can only say that much depends on the vigor of the individual bird. Some cocks keep their vigor much longer than others and some have more to begin with. The only way to be sure is to test your fertility by setting a few eggs. If fertility is under 15 per cent cut down the number of hens.

Difference in Hens

If the per cent of infertile eggs is still too large after the number of hens is reduced, it is a good plan to test the hens themselves by hatching eggs from each one separately. I still remember my disappointment several years ago, when after a hen had sat on a nest full of eggs from a particularly choice hen (as I thought) for three weeks, investigation showed every one infertile. Why this was the case I do not know. Perhaps the cock neglected her. The lecturer I quoted failed to mention favoritism, but that is a factor not to be overlooked. Perhaps, as she was an unusually prolific layer, she had lowered her vitality. Perhaps she was overfat. I recall another hen last spring, that season when hatches were uniformly bad. This old hen did not lay many eggs but she had been such a good layer that I was glad to get eight of her eggs together and spare a hen to hatch them. From these eight eggs I got seven husky chicks, when from other hens I got seven chicks from 15 eggs. Why? I don't know, but it is evident the hen herself is no small factor in determining the fertility or infertility of her eggs.

The proper environment for breeders is one of comfort. This is no doubt the reason free range for at least part of the day is so often advised for breeders. Possibly it is be-

Coulson Co.

Petaluma, Calif.

cause the breeding yards from which most of our fancy eggs come are small that there is such a large per cent of infertility among them. The hen that is free to wander in pasture and orchard and garden, picking up bugs and worms and nipping the young tender green ought to be more contented and more comfortable than the hen confined in a stuffy little pen, for this is her natural habitat. She gets exercise while she picks her green feed and ought to have more vitality because of it.

Feeding for Fertility

My university lecturer discreetly omitted any mention of feeding for fertility, except as to green feed, which is important enough. Greens contain that indefinable something called vitamines which affect the health out of all proportion to the actual nourishment they contain. Some hens may be vigorous and healthy without green feed, but they are the birds of extraordinary vitality, the sort you can only kill with a club. As to the grain ration most conducive to fertility we know very little except that a fattening ration is not good. Oats and wheat have generally been considered the best grains for breeders, especially oats. Rolled oats, the sort we use for breakfast, and sprouted oats are time honored feeds for breeding stock. Possibly this is because they contain more ash or mineral matter than corn, barley or even wheat. A preponderance of whole grain rather than too much of the forcing mash fed to layers is also recommended, as is fresh meat occasionally. The ideal ration for breeders would be a bran mash in the morning, for bran contains both protein and ash, fresh lean meat at noon, two or three times a week, and sprouted oats the other days, oats and wheat at night and green feed all day on range. I do not know of any one who feeds his breeders in this way. Doubtless it would cost too much, but it is the ideal breeders' ration. Breeders must be well nourished, but they must not be fat. They must have food that they can digest without clogging their digestive tracts with crude fiber. They must have green feed and protein, and, it goes without saying, fresh water and shell and grit. Even on the most perfect ration they may still fail to produce fertile eggs, but we shall have done our best.

When it happens, as it has of late, that the grain feeds which are known to encourage fertility are either too expensive or not to be had at any price, our only course, as I see it, is to make environment and the other factors which are involved more nearly perfect than ever. If we cannot feed oats, we can at least give some range and plenty of greens. If wheat is not to be had we can at least feed a little lean meat to some of the breeders. It is not always necessary to have a large number of breeders, but it is extremely important that those we have be vigorous and well nourished. With all our care, however, we shall still continue to have infertile eggs, I presume, till we have learned just what part the individual cock or hen plays. Feeding, environment, age, vigor, all count, but there is a secret we have not learned. When we do learn it we shall know just why under the same conditions one hen lays fertile eggs while another does not.

Poultry Queries

Conducted by J. A. Koethen

Turkeys Sick

Please tell me what to do for my turkeys. They seem to be smothering to death, go around gasping for breath. We opened a dead bird and found the lungs badly infected. Whatever it is it seems to be contagious. — Subscriber, Brawley.

It is impossible to say from the very brief description given whether the turkeys are suffering from aspergillosis, which comes from the development of mold spores in the lungs and bronchial tubes, or from congestion of the lungs or possibly pneumonia, which is an extreme congestion accompanied by fever. Nothing is said about fever or about the behavior of the sick birds, except that they are gasping for breath, nor am I told how many have shown symptoms of the disease, how long it lasts or how many have died. If it seems quite general in the flock I am inclined to think it must be aspergillosis, for pneumonia is rare among turkeys and would be very unlikely to affect more than an occasional bird. Whatever the disease there is little that can be done for it except to remedy conditions. Examine the feed and scratching litter carefully and make sure there is no mold anywhere. It is the tiny mold spores in moldy or musty or "heated" grain that find their way to the lungs and there develop into yellowish or whitish tubercles not unlike those of tuberculosis. This may have been the infection you found in the lungs of the bird you opened. Put the affected birds in a warm, dry place—an open front coop which faces the sun is best—or a sunny, well ventilated room. Give them dry, clean straw to lie on, and all the green feed they will eat. For pneumonia Dr. Sanborn recommends one grain of phenacetin and one grain of sulpho-carbolate of zinc made into a pill with bread. This is given every six hours. A drop of tincture of aconite in milk every two hours relieves the hard breathing. Dr. Salmon advises flaxseed tea used as a drink and also with one grain of nitrate of potash dissolved in it three times a day. If the disease is due to mold these remedies will do no good. If it comes from taking cold they may help. In any case they will do no harm, but the main reliance must be on removing the cause.

Raising Squabs

Is there profit in raising squabs? Where could I get the right kind of stock? Where could I get reliable directions for raising and care?—Subscriber, Van Nuys.

The National Standard Squab Book by Elmer E. Rice gives complete directions for establishing a squab plant. I do not know its price, but you can find out by writing to Elmer C. Rice, Box 175, Boston, Massachusetts. I have been told that raising squabs is not profitable under present feed conditions, but you will find out more certainly by interviewing some large pigeon growers. I am mailing you the names of several whom I think you will find reliable.

The Pride of Petaluma

KRESKY'S 1920 VENTILATING brooder stove forces proper ventilation in spite of the operator and sweeps the room with FRESH AIR. PETALUMA'S latest sensation and result getter. TRY it. Keep it if you like it, or send it back if you do not.

THE LOST TOOTH

Had a looth tooth for a week, an' now
Ith out an' people thay,
"Leth thee you thmile a little bit—you
look tho funny juth that way."
An' I can't thay my etteh now nor thpeak
big wordth to thave my thoul,
Coth were there uthed to be a tooth,
there ithn't nothin' but a hole;
An' all the time my tongue thilpth
through, but that'th not much to laugh
about—
I'll betcher old folkth wouldn't grin if
they thould have a tooth come out.
Lath night Ma gave uth corn to eat, an'
I awful fond of corn—
I tried to chew it off the cob the way
I've done thinth I wath born,
Coth I forgot my tooth wath out; but
when to get a bite I tried,
I found it wouldn't work that way and
had to take it round the thide.
An' Pa and Ma juth laughed outright
which wathn't fair, coth all along
They've told me that to laught at folkth'
afflictionth its a thinful wrong.
I think I'll go an' hide mytheIf. I'm juth
ath tired ath I can be
Of having every one that cometh to our
houth making fun of me
They athk me questhions juth to hear
me talk, ann' then they tuck my chin
Tho they can thee the funny fathe I
have to make the timeth I grin.
There'th company comin' here tonight,
but I'm not goin' to thtay about
An' have to thpeak an' thmile for them
becoth my upper tooth ith out.

—By Edgar A. Guest.

AUNT ED'S THANKSGIVING

"LOOKS like we was goin' to have a good fall of snow for Thanksgivin'." Miss Edwina Blakesly looked up and down the village street. "It's deep enough for sleighin' now."

The merry jingle of sleigh bells seemed an answer to her thought. "That must be Miss Ellis' company from the city," flattening her nose against the glass, as a big wooden sleigh, drawn by two powerful black horses, dashed past, leaving a trail of gay laughter which floated in to Miss Edwina through the closed window.

"I guess they've all got somethin' to be thankful for, if it's only that they're young and care free. It's a great thing to be young and—"

A quick knock at the kitchen door was followed by a woman's voice. "Edwiny! Edwiny Blakesly! Are you there?"

"Yes, I'm here; where'd you suppose I'd be?" Crossing into the kitchen, "Come in, Hannah, come inside; don't you see the wind is blowin' the snow all over my clean floor? What you want?"

"I jest wanted to ask if you'd lend me half a pumpkin, a quart or so of milk, about a dozen eggs, and some flour. You know Sukey's gone dry and the hens ain't layin' none to speak of. And I'd like some flour, Edwiny, and a pound or two of lard, some white sugar and some ground spices. I thought I'd make some pies."

"I reckon you forgot the bakin' powder, Hannah, or have you got some?"

"La, no! I ain't got none. I never do buy bakin' powder. I don't use it often enough to buy it."

Edwina set the sugar, eggs and spice on the table and proceeded to measure out three pints of rich, creamy milk. "Expectin' company?"

"Sure. Do you reckon I'd bother to get up a big dinner if I wasn't? Bacon and cabbage and apple butter would be good enough for me and Hiram and the kids. We could be thankful enough over that, for all we got to be thankful for. Nothin' but losses and hard work from one year's end to the other. Another hog died yesterday; that makes four since August."

"Who's a comin'?"

"Bill and his wife and Lettie and her husband. They've both got a new baby, and they're splittin' anxious to show them to grandpa and grandma. Grandpa is tickled to death. He went out to kill some chickens, a smilin' and a chucklin'; even tried to whistle Dixie, but he can't screw up his lips none since he had his teeth took out."

"Ain't grandma tickled?"

"She jest ain't! not one bit. I've seen a raft of babies in my time. It jest means a lot of extra work for me, when I had figgered on settin' down the whole afternoon with my quilt patches."

Edwina was half way down the cellar steps. She paused, her eyes kindling with anger. "Hannah Carson! You'd oughter be ashamed of yourself, talkin' like that. I should think you'd be almighty glad to have somebody to come home to you. Look at me!"

"Yes, look at you! Independent and care free. Nobody bothers you. You come and go jest as you please, get up and go to bed whenever you feel like. Christmas, Thanksgivin' or Fourth of July don't ever mean a bunch o' company and a lot of extry work for you. I often say if I was as foot loose as Edwiny Blakesly I'd be willin' to live forever."

"Care free! Foot loose! Yes, I'm all that, if you look at it that way. But jest look at the other side of the picture. I am all alone in the world. Nobody don't care whether I live or die. I ain't never had the joy of motherhood, never rocked and sung no babies to sleep; never had no courtin' nor marryin' in my house. I'd be willin' to cook for a week jest for the pleasure of havin' someone come and spend the holidays with me—someone who really wanted to come, even if it was to show off their new baby. You mothers who are always thinkin' of the care of your children need never stop to think what a blessed thing it is to have a child."

Edwina plunged into the cellar, as if ashamed of her outburst.

"I reckon you're right, Edwiny," carefully fitting the pumpkin and lard in the side of her basket, "and I reckon, too, that my complainin' is mostly at the end of my tongue. I'll be real glad to see the children and the babies, too. Thank you for the pie things."

Shutting the door after Hannah, Edwina slipped the bolt, then dropping into her big rocker, she threw her apron over her head and indulged in a good cry, the first in many a year. Never before had she analyzed the ache in her heart, the void in her life.

"If I could only have a kept Jim," speaking her thoughts aloud, as those who live alone so often do. "But his father must marry again and take the boy out West. He's a man growed now, must be about 26. Let's see," counting her fingers, "I reckon he was 27 his last birthday. He's been gone 15 years. I reckon he's forgot all about his aunt Ed, as he used to call me.

"I did have one happy winter since Tom took Jim away. Dora Sutherland was like a streak of sunshine. The school board expected her to board around, but she wouldn't leave here. She got a better school out West somewhere and never come back. She sent me a couple of picture postcards, but I never got a letter. I reckon she's forgot, too."

A loud "hello" roused her. "Hello there, Miss Blakesly; some mail."

"All right, Sam," Edwina called, "jest throw it up the walk; I'll get it. Much obliged."

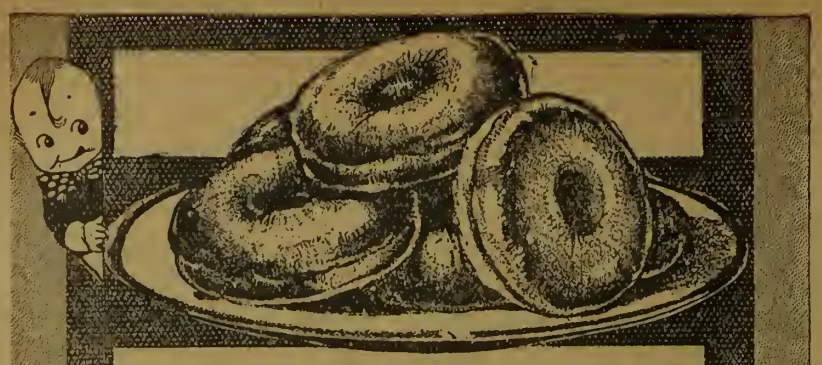
Throwing a shawl over her head and shoulders, she went out, pushing the snow to either side with a broom, until she reached the mail box. Just a couple of magazines, a patent medicine book and some flower catalogs.

Edwina put on her glasses and drew the rocker near the window. Tearing the wrapper from one magazine she resolutely turned the pages in search of some attractive heading. She was determined to read down the tumult which Hannah Carson's grumbling had awakened. One line caught her eye. "We can have anything we want, if we only want it hard enough." Edwina dropped the paper in her lap and looked out at the whirling snow.

Half an hour later a bright fire was burning in the kitchen stove, a kettle of golden pumpkin was bubbling upon it, and Edwina was beating up a spice cake. "Dora always liked spice cakes," she soliloquized, "and Jim loved ginger cookies. Whichever one comes, I'll have somethin' they like."

A very tired but strangely excited Edwina gazed with pride at the many good things on the pantry shelves. Three deep pumpkin pies, a big yellow bowl of crisp brown doughnuts, a delft bowl filled with ginger cookies, and a big spice cake. On the broad window sill two fat chickens, all ready to stuff, and in the upper cupboard preserves and jelly of all kinds. "I reckon that'll make a pretty good dinner," smiled Edwina. "Now I'll light the fire in the spare room and put out my new blankets."

That task finished she came back



Never in the world were there doughnuts like Calumet doughnuts. In no others will you find that toothsome, tender goodness. It's the same with all bakings.

HIGHEST AWARD GIVEN CALUMET BAKING POWDER WORLD'S PURE FOOD EXPOSITION

CALUMET Baking Powder

PARIS EXPOSITION

Makes Most Palatable and Sweetest of Foods

Never anything but the very best—light, flaky and wholesome—because this 30-year favorite of leaveners is absolutely pure in the can—pure in the baking. Contains only such ingredients as have been officially approved by United States Food Authorities.

Made in the world's largest, cleanest, most modern Baking Powder Factory.

You save when you buy it—moderate in price. You save when you use it—has more than the ordinary leavening strength—therefore you use less. You save materials it is used with—never fails. Order today. Improve the quality of your bakings. Reduce baking costs.

Calumet Doughnuts

½ Cup sugar, 1 Egg, 3 Level teaspoons shortening, 1 Level teaspoon salt, ¾ Cup milk or water, 2½ Level teaspoons Calumet Baking Powder, 2½ Level cups flour. Lemon and mace flavor.

How to make them—Cream sugar and shortening together, add well beaten egg, then add milk. Next mix in flour and baking powder well sifted together. Work dough as little as possible. Turn out on well floured board and roll out quarter inch thick; cut with doughnut cutter and fry in boiling hot fat.

Valuable 72-Page Cook Book

Handsomely illustrated in colors. Most complete and dependable recipe book ever issued. Hundreds of helps in reducing household expense. Scores of selected recipes. Better ways of making better foods. Send slip found in can of Calumet and three 2-cent stamps to help cover cost of packing and mailing. Calumet Baking Powder Co., 4100-4124 Fillmore Street, Chicago, Ill.

to the kitchen. "Mebbe they won't be here in time for supper," she thought. "This snow may make the train late."

The cat got up from his bed by the woodbox, stretched himself lazily, then jumped in Edwina's lap. Rubbing his head against her he purred coaxingly.

"Yes, Jasper, I reckon we might as well eat supper and get to bed early. We're liable to be busy tomorrow. Here comes another sleigh. Some of Mis' Ellis' folks must a come on the late train." She went into the sitting room to watch the sleigh pass. "I reckon not, Jasper. They must be strangers. That's a livery sleigh."

The sleigh stopped at her own gate. Her heart beat wildly as she watched a man spring out, help a lady to alight, then reach in for a suitcase and a bundle.

The lady came up the walk, her long fur coat making a wide path in the snow. The man, having paid and dismissed the driver, followed her. Edwina hastened to open the front door.

"Dora!" she gasped, "Dora Sutherland!" Whatever else she said was smothered in the fur coat.

"Oh, I'm so glad to be with you again—so glad, so awfully glad!" Dora hugged her close.

"Come in, honey, come in."

Edwina was trembling with happiness. The man followed, put down the suitcase and deposited the bundle on the couch. "Well, Aunt Ed, ain't I welcome, too?"

With a startled cry she turned. The tall man looked at her with the big brown eyes of her lost boy. "Jim!" she sobbed, "Oh, Jim! I thought you'd forgotten me."

"Not much, Aunt Ed," stroking her cheek with gentle touch, "I never could forget you. The time I spent with you was the one bright spot in my boy life."

"Just as my year with you is the sweetest memory of my teaching days," Dora broke in.

"I have thought of you both so often, and today I really longed to see one or the other of you. And now I have you both. But," looking from Jim to Dora, "how did you happen to come together?"

Jim laughed happily. "When a man goes to see his dear old aunt, the one friend of his boyhood, it is natural that he'd want to take his wife with him, isn't it?"

"And especially when his wife already knew and loved the aforesaid aunt," commented Dora.

Edwina beamed upon them. "I couldn't wish for anything better, but I am surprised."

"Didn't you get my letter?" Jim asked.

Edwina shook her head.

"I wrote two days ago. You should have gotten the letter this morning. I didn't want to write until I was positive that I could get off. It didn't give you time to answer, Aunt Ed, but I felt sure of a welcome."

Dora unwrapped the bundle on the couch and laid a sleeping babe in her aunt's lap. "Edwina Blakesly, number two," she explained.

"A baby, too!" She lifted the child tenderly, kissed the little dimpled face, the tiny roseleaf hands; all the pent-up mother love shining in her face. Jim looked happily on, but Dora's eyes were dim with understanding.

"You see, Aunt Ed, when we were looking for a name for baby I suggested yours, telling Dora how good you had been to me. When she found out you were the same Edwina Blakesly that had been so good to her, she was just as pleased as I was. Then we decided that we'd come down and spend Thanksgiving with you."

"It will certainly be a great and happy Thanksgiving for me, Jim."

"We're coming every year, Aunt Ed. I wonder what became of that letter."

"The letter don't matter," Aunt Ed replied, "so long's you got here."

The west wind told the north wind as he caught him at the corner of the house, that he had tossed the letter into the big lilac bush while Miss Edwina was getting her shawl. They laughed like two naughty boys, then started a wild game of tag with the east wind who was blowing over the hill.

The next morning Ted Carson came to borrow some cream and white sugar for the coffee. "Ma says, Miss Edwiny, that she'd be pleased to hev you come over for dinner. 'Twouldn't be so lonesome fer you."

"Tell your ma that I'm very much obliged, but I've got company. My nephew, Jim Blakesly, with his wife and baby, is come to spend Thanksgivin' with me."

"Gee! but she acted proud about it," commented Ted, as he trudged along home. "When she gits as much company as we hev, she won't think it's so great."—Farm and Home.

TEACHING OBEDIENCE

By Minnie Embree Parker

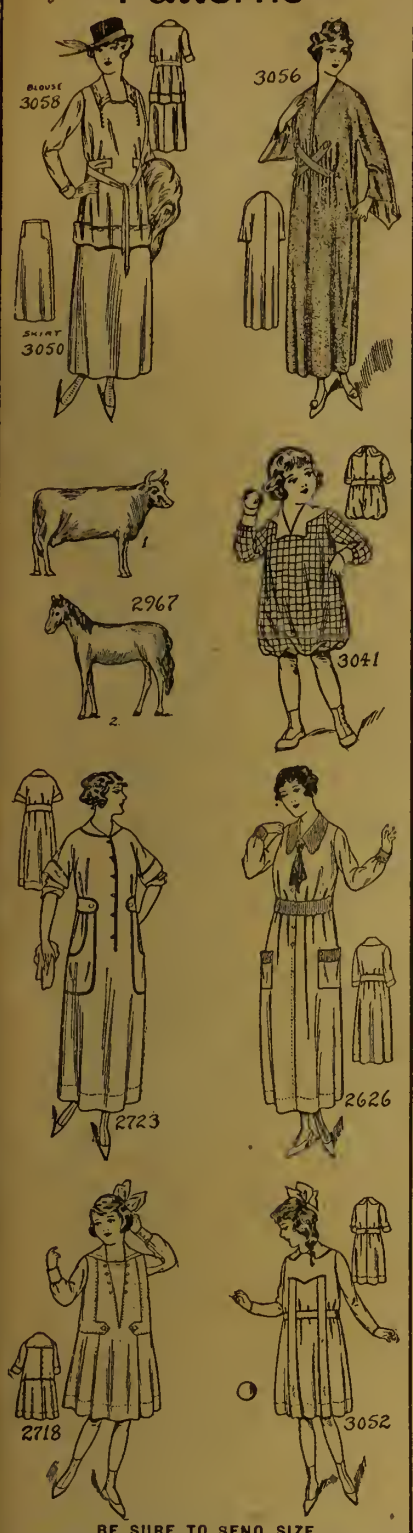
Dear Editor: My little girl values your paper so highly that she called my attention to the offer of a renewal for articles in regard to child culture. I was thinking it called for about 500 words, but when I got it written I saw it was to be 200 words, so I had to make two separate articles. If you can use either or both, I will be glad, for I can see now, with my children 11 and 12 years old, that early training is absolutely necessary. So many mothers of tiny children do not know how to begin right.

In these days of Bolshevism and anarchy of every description, it seems to me the most important thing in the care and training of children is to instill into their lives from earliest infancy the principle of yielding to rightful authority. Lessons, graded to suit age and condition, should be begun at the very dawn of intellect. The mother is the queen upon her throne, and the tiny bundle of humanity is the subject. It would seem entirely unnecessary to say that there should be no harshness. Love is the ruling power but there must be firmness and proper punishment when necessary, for sometimes pain is the only language a child can understand. The queen is the ruler and not the subject. This must not be lost sight of for one moment. If this principle is firmly imbedded into the mother's heart, so that it will be carried out from the very beginning of the child's life, she will not have the trouble in later years that we see most mothers having with big boys and girls. How refreshing it is, these days, to see a boy yielding willing and respectful obedience to the wishes of mother or teacher! Such a boy will grow into a man who respects his government, a citizen any nation can be proud of. I believe it was Froebel who said, "Parents, live with your children." But he never meant that parents should give the reigns of government into the hands of the children.

It is for the good of the child that he be taught to yield to authority. Many a mother is grieving because she has no control over a big boy. He ignores her authority and even shows marked disrespect when she remonstrates with him. Many big girls do the same. Mother knows that some course of action will result disastrously to her loved ones, but when she tells them so they think she is old fashioned and entirely too particular. And they are not a bit careful not to hurt her feelings by telling her so. She is now reaping what she sowed when she allowed the tiny baby to have his own way and did not instill into the mind of the little one a proper respect for authority. It seems a little thing, many times, to insist upon obedience in every particular, and we let it go, time after time, until by and by we wake up to the fact that it is the "little foxes that spoil the vines, and our vines have tender grapes." A baby that is taught what "No" means when he wants to take Papa's watch into his own hands, will not make himself and others miserable by crying for the moon. It may seem to be the easiest way to put out of reach everything baby shouldn't have, but if you do you will make no end of trouble for yourself and others when you take him into some other home. In the long run you will find it pays to take the time to teach him to leave things alone. It will be a valuable lesson, not only in obedience, but in respect for other people's property, which virtue is sadly lacking in the youth of today.

Let parents first have complete control over themselves, yielding willing obedience to proper authority, then let them, in love and justice, require obedience from their children, and what a different state of society would be the result! We would have "a little heaven here below to go to heaven in."

The Cultivator Patterns



BE SURE TO SEND SIZE

3058-3050- A Smart Costume. Blouse 3058 cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 3050 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. A HELP WITH BABY

By a Texas Mother

One of the greatest helps I ever had with my babies was a plain but substantial gocart. Since I had the care of baby and my house work to do also it saved me many steps to fix him comfortably in his cart and roll him from room to room as I followed my daily tasks. Our babies soon learned to love their cart, and it made many outdoor duties a pleasure to both baby and mother. It was easy to milk, gather vegetables, feed the chickens, etc., while baby sat near by in his cart happy as could be.

When our baby was 19 months old it was necessary for him to undergo an operation for rupture and he had to be kept on his back for two weeks. He wasn't sick after the first few days and it was almost impossible to keep him in bed. The doctor let us get a cart and with pillows fix a good bed for him and we rolled him about the hospital, out of doors, on the sidewalks and to a near by park. The baby got well and strong, is now four years old, and may the gocart be as much help to other mothers as it has been to a Texas mother.

THIS WEEK'S PATTERNS

This week's patterns show a particularly winning kiddie romper. The white collar and cuffs may be edged with a blanket stitch in black or colored cotton. Black is used on most of the smart little rompers and dresses in the shops that display them with big price marks attached.

A further suggestion for making this little garment a very Christmasy present is to add one or two pockets made like the little duck outlined in the illustration on this page. If you make pockets on each side of course the pattern must be reversed so the ducks face each other. To use this as a pattern we suggest that it be doubled in size. This pattern was drawn in a space 2½ by 2 inches, and doubling would make a good size, 5 by 4 inches. The line of the duck's back is the only part left open for the pocket, of course, the rest being stitched down firmly to the material of the dress so that the actual opening is only three inches square. If thought more practical the line of the duck's back, which is the top of the pocket, can be left perfectly straight.

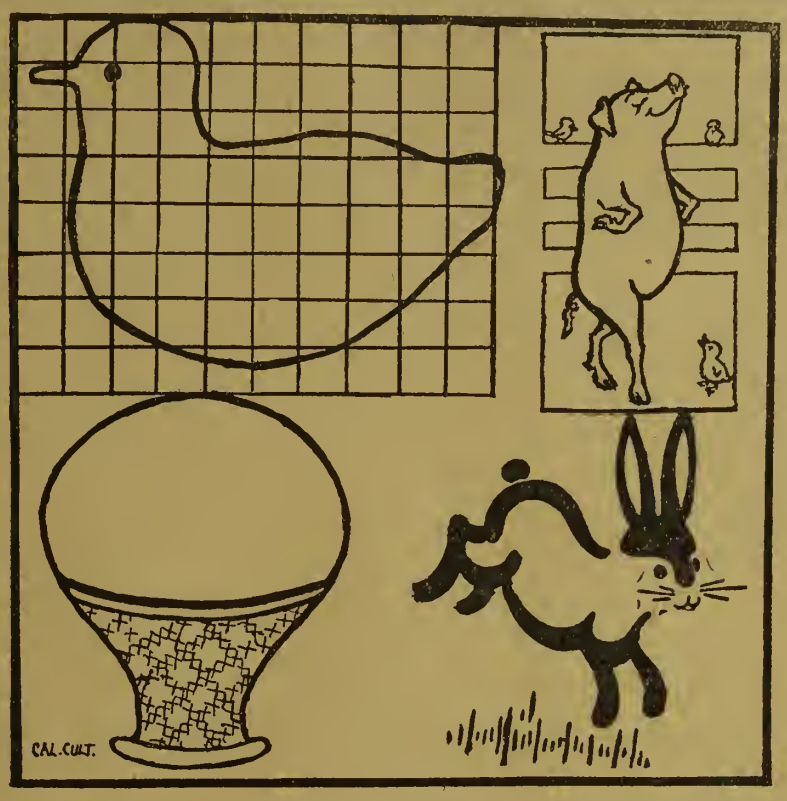
A word as to drafting your own designs. This little duck was drawn from the illustration in last week's patterns. This was found to occupy a space five-eighths by four-eighths inch and one-eighth inch squares were drawn over it to help in redrawing. Then for this illustration a space of five half inches by four half inches was drawn and divided into similar little squares—and the little duck was very quickly and easily outlined. Now we suggest that you make a paper pattern by doubling the dimensions shown in this drawing.

The same method can be followed in making other designs that take your fancy.

The little basket design, for instance, is drawn to show how it can be worked out in cross stitch with outlining for the handle. This could also be cut from cloth, like the little duck, and put on as a patch pocket with slit for pocket along the curve of mouth of basket with the handle in outline stitch.

The dashing little bunny or the dancing pig would be fascinating on a child's bib or could be repeated as a border design. We recently saw displayed a dainty little child's dress, made like the little girl's dress 3057 shown last week, of yellow chambray with collar and cuffs of white edged with black cotton in blanket stitch, and on each side of the little yoke two tiny chickens with wings and necks stretched as if trying to fly, also of the white material outlined with black. The bunny or the pig would be well adapted to this treatment.

The negligee 3056 would make a much appreciated Christmas gift, of eiderdown, outing flannel or challis. The cross straps in the front of fancy ribbon or decorated with a bit of quick embroidery would add much to its charm.



HOUSEHOLD QUERIES

Thousand Island Dressing

Just noticed some subscriber wishes recipe for Thousand Island dressing and as I happened to have one, will send it in. Hope it is what she wants. I myself have never tried it, as I just got it today, so don't know how good it is.—Mrs. H. E. Peterson, Fairmead.

One cup mayonnaise dressing, one cup whipped cream, one-half cup chili sauce, two tablespoons minced pimento, two tablespoons minced green peppers, one tablespoon chopped cucumbers, one tablespoon chopped nuts, one tablespoon Worcestershire sauce. Mix in the order given and use at once.

Mrs. N. R. Beckwith of Pasadena also sends the above recipe.

Another was received from M. O. L., Los Angeles. It follows:

Put half a cup of olive oil into a small fruit jar, the juice of half a lemon and half an orange, a teaspoon of grated onion pulp, one-fourth teaspon each of salt and paprika, one-half teaspoon Worcestershire sauce, one-fourth teaspoon mustard and three sprigs of finely chopped parsley. Put the rubber and the cover on jar and shake vigorously until well mixed and creamy. Then pour over your salad.

THE EASIEST WAY

Following the line of least resistance is what makes rivers and men crooked.—Boston Transcript.

Put This Toy Tractor in His Stocking for Christmas—Only 25c

Looks just like a big Avery Tractor. Cast iron—has rolling wheels—finished in beautiful red and black enamel with gold striping. He'll be delighted with it! Stands 3½ inches high, 5 inches long. Makes a dandy toy—or table ornament. Worth many times its price.

Send 25c (35c in Canada) with the names of those talking of buying a tractor, cultivator or a grain thresher. Also mention as many tractor and thresher owners as you can remember. That's all. We'll send the toy by return mail.

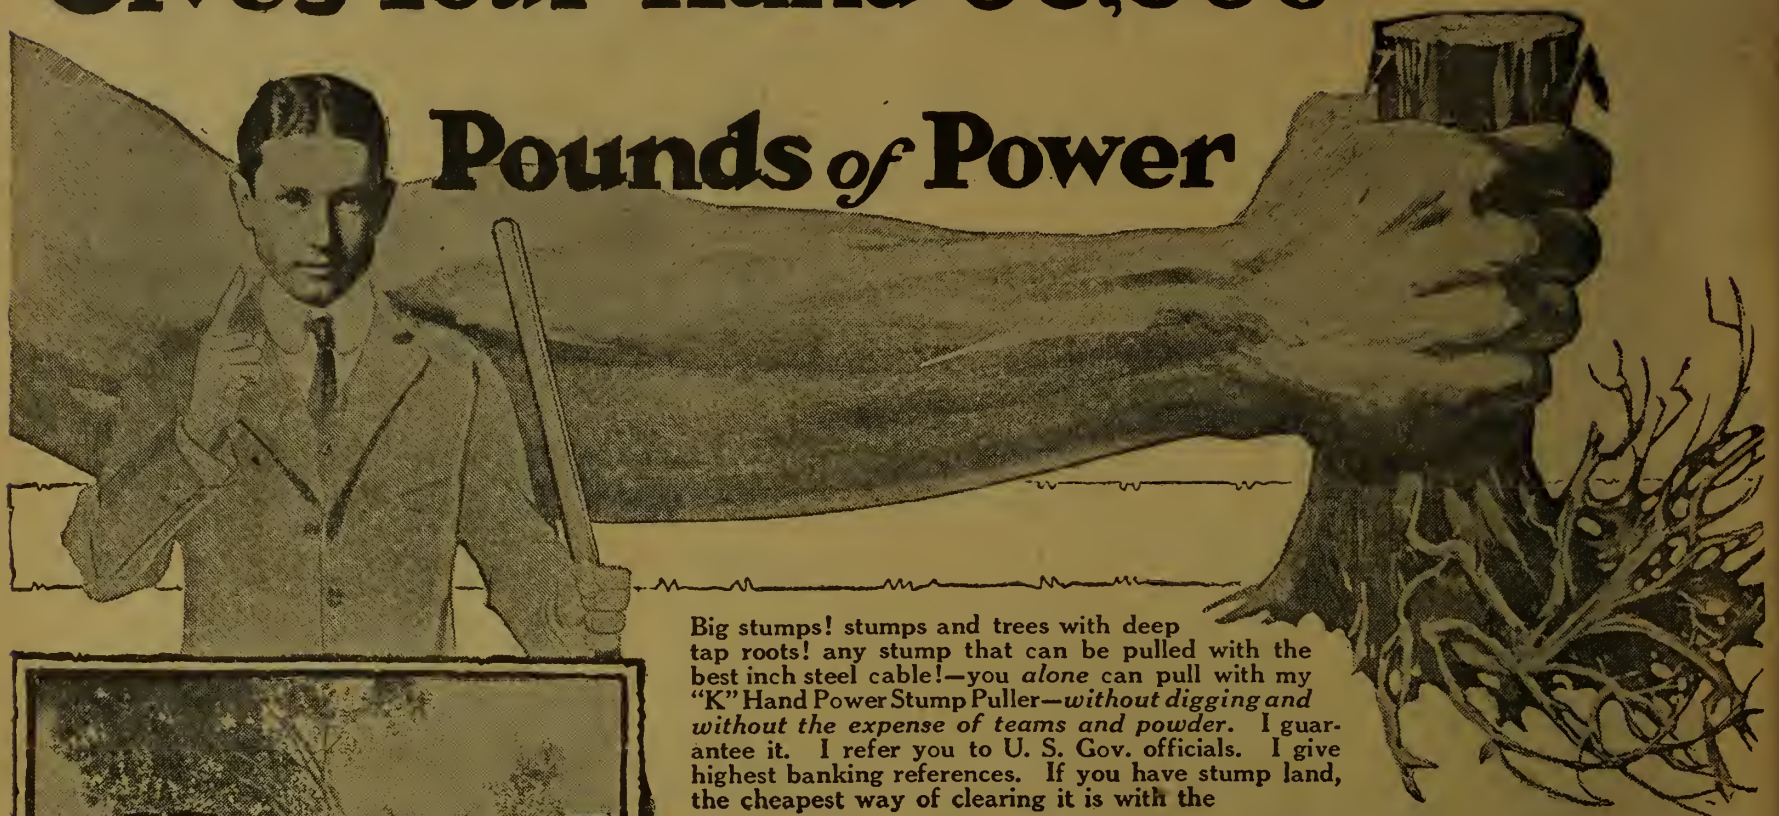
My K Hand Stump Puller

Gives Your Hand 96,000 Pounds of Power



Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER

K Stump Puller

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not* work

Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

Special Offer We are making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write us today for full information and for free book on Land Clearing and about our Wonderful Drag Saw.

The Fitzpatrick Products Corp.

A Winner at Chicago and California Internationals

Aiglonel, the Percheron stallion at the University Farm, himself a winner at the Chicago International, and whose get were also winners at the California International Livestock Show at San Francisco, November 1 to 8.

The Edges of all Clark "CUTAWAY" DISKS are Forged Sharp

Each Disk is made of toughest special cutlery steel and won't crack, chip or break. The edge is forged. This makes a lasting cutting edge, much better than one that's rolled or ground down.

Get a genuine CLARK "CUTAWAY" Harrow with cutout disks and thoroughly cut, mix and pulverize your ground.

Clark "CUTAWAY" Double Action Horse Harrow

Gangs are kept rigidly in place. The special steel rigid main frame does it. Rear gangs can't slue and trail front gangs, but cut midway between front gang tracks. All the soil is stirred and to a uniform depth.

CLARK "CUTAWAY" Harrows save man and horse power—cut time and labor of harrowing in half.

Ask your dealer about them. If he hasn't them some nearby dealer has.

Included in the CLARK "CUTAWAY" line are Heavy and Light Service Tractor Harrows, Horse Harrows, Right Lap Plows, Bush and Bog Plows, Extension Head Harrows, Orchard Plows, and other special disk implements.

Write for free valuable book, "The Soil and Its Tillage" also complete catalog.

Agri GYPSUM

Apply AGRI GYPSUM to your land to stimulate the growth of vegetation and release available plant foods essential to crop growths.

Gypsum is recommended for grain lands by authorities on soils

Potash, Phosphorus, Nitrogen and Calcium are valuable elements very often found in soils in such chemical formations as to make them unavailable as food for plants. The application of gypsum breaks up these formations and chemical changes resulting give the crops the full benefit of the growth producing elements.

Gypsum applied to alkali soil will neutralize the alkali, rendering it harmless to the growth of vegetation. The University of California has conducted many experiments with gypsum on alkali soils and the results obtained are the best evidence possible of the effectiveness of gypsum in changing non-productive to productive land.

Alkali soil which may be redeemed to usefulness by using AGRI GYPSUM

Bulletin No. 133, page 8, reads as follows:

"Reclamation of the black alkali has been carried on for a number of years, gypsum being applied, turned under and thoroughly watered. The result has been a very general conversion of the dreaded carbonate of soda into the far less harmful sulfate; and on spots where not a blade of grass would previously grow, there have been produced excellent wheat and barley, three or four feet high and full-headed, although the surface of the ground was, at harvest time, covered by a thick crust of white alkali."

Gypsum is a specific for black alkali. It transforms the harmful sodium carbonate of the alkali into harmless Calcium carbonate. Gypsum supplies the lime calcium in soil deficient in lime and also supplies sulphur which is a fertilizer.

The United States Gypsum Company is the largest producer of gypsum in the world. AGRI GYPSUM is ground fine and properly prepared to produce quickest and most beneficial results.

Inquiries as to what may reasonably be expected of gypsum are cordially solicited.

Vol. LIII, No. 23 Los Angeles, December 6, 1919 One Dollar Yearly

American Federation of Farm Bureaus Organized

By Robert W. Hodgson

ONE OF the most important, if not the most important, meetings of farmers ever held in this country was the recent conference of state farm bureau representatives in Chicago, November 12-14, for out of that meeting of farmers from all over the nation has come the largest and strongest farmers' organization in the history of this nation, the American Farm Bureau Federation.

It means that no longer will the American farmer meekly submit to being the scapegoat of either capital or labor. Notice has been served on both that henceforth the farmers of the nation, as the largest industrial class, propose to have a part in shaping national affairs and in insuring a fair return on their investment and labor. In wisely adopting this attitude the American farmer continues to be, as always in the past, the great stabilizing national influence in periods of national crisis, the anchor of the nation to windward in times of storms of radicalism.

The American Farm Bureau Federation comes as a logical development of the farm bureau movement. It is conservatively estimated that well over 1,000,000 farmers are allied with the several thousand county farm bureaus in the country, most of which are federated in state organizations. Early last spring ten of the Eastern states already having statewide organizations met at Ithaca, New York, to discuss the advisability of a national organization. So unanimous was the sentiment in favor of such a meeting that an organization committee was appointed with instructions to call a meeting at Chicago, November 12 and 13, to perfect a national organization.

At this meeting representatives from 36 states were present, those from California being W. H. Walker of Glenn County, president of the California Farm Bureau Federation, George H. Sawyer of Stanislaus County and Volney H. Craig of Los Angeles County. This convention represented nearly 1,000,000 American farmers. And while this membership is now probably not much over one-third that of the American Federation of Labor, the influence of the American Farm Bureau Federation is already probably as great as that of organized labor for most farm bureau members represent several other workers on their farms, members of their families and hired help.

Much time was taken up in harmonizing differences in aims and ideals, as well as in getting acquainted. Discussion regarding financing the new organization was particularly heated, but was compromised satisfactorily. Drafting a constitution acceptable to all 36 states proved a long and tedious process but the conference really accomplished the purpose for which it was called, the launching of a plan of work for the American Farm Bureau Federation.

The objects of the new organization as expressed in the constitution, which must be ratified by at least ten states before the date set for the next meeting, March 3, are "to correlate and strengthen the state farm bureau and similar organizations of the several states in the national federation, to promote, protect and represent the business, economic, social and educational interests of the farmers of the nation, and to develop agriculture." The three captions under which practically all the purposes and objects of the federation may be summarized were legislation, education, and business. The federation proposes to acquaint the various legislative bodies of the nation, both state and federal, as to the desires and wishes of the farmer and in turn to keep its members informed regarding proposed legislative measures affecting the farmer. Education by means of the closest cooperation with the state and federal departments of agriculture, through demonstrations and otherwise, was one of the keynotes of the convention. Cooperative buying and selling also constituted a big feature of the discussion.

The originally proposed constitution provided for one representative from each state and an additional representative for each 10,000 paid up members. The states having the smaller organizations naturally felt that by this arrangement they would not receive adequate representation on the board of directors and accordingly made a fight on this point which was finally compromised on an additional representative with voting power for each 20,000 paid up members.

Selecting the executive committee proved a difficult task, the California delegation playing a leading part in the discussion culminating in the final arrangements made. The nation is to be divided into four districts the northeastern group, the central group, the southern group, and the far west group. Each region furnishes three members to the executive committee, which, together with the president and vice-president, make up an executive committee of 14 members. The president of the new organization is J. R. Howard of Iowa, the man who is stated to be largely responsible for the repeal of the daylight savings act; vice-president, S. D. Strivings of New York, and treasurer, O. A. Bradfute of Ohio. The members of the executive committee are: Southern group, Gray Silver, W. Virginia; James W. Morton, Georgia; George Bishop, Oklahoma. Far west group, W. H. Walker, California; W. G. Jamison, Colorado; John F. Burton, Utah. Central group, O. A. Bradfute, Ohio; Harvey J. Sconce, Illinois; Chester H. Gray, Missouri. Northeastern group, E. B. Cornwall, Vermont; E. F. Richardson, Massachusetts; H. E. Taylor, New Jersey.

The states represented at this memorable convention were: West Virginia, Connecticut, California, Illinois, Indiana, Maryland, Michigan, Kansas, Missouri, New Hampshire, Vermont, Minnesota, Iowa, Colorado, New York, Virginia, Utah, Kentucky, Nebraska, Massachusetts, Oklahoma, Delaware, Mississippi, New Jersey, Georgia, Tennessee, Texas, North Carolina; Montana, South Dakota, Ohio, Rhode Island, Arkansas, South Carolina, Pennsylvania and Idaho.

Resolutions

We declare our independence of affiliation with any commercial labor or industrial organization, but maintain a cooperative attitude toward all movements promoting the welfare of American institution.

We appreciate the work of the press, both agricultural and secular in its promotion of high ideals and constructive thought.

We unqualifiedly assert our loyalty to the principle of the freedom of the people under our American institutions, and while recognizing the right of any and every class of our people to associate themselves for material benefit, we just as strongly assert the right of every American citizen to the free and unhampered privilege of disposing of his labor or products thereof as he may individually desire.

We desire to point out that a large factor in the high cost of living is the curtailing of production through shorter hours, lessened efficiency of labor, and strikes.

We approve the federal land banks and request that the miximum individual loan be changed from $10,000 to $25,000.

We recognize that land ownership is stewardship, that ownership does not give the right to soil depletion and we deplore the system of tenantry that encourages a rapid reduction of soil fertility.

We recognize our great obligation to the returned soldiers and sailors and recommend the appointment of a committee of three of our board of directors to act with the American Legion in devising means of getting returned soldiers reinstated in civil life.

We extend to our soldiers of land, sea and air, men and women, fresh from the battle fields and hospitals of Europe, our admiration and our love. These young men and young women, sons and daughters of ours—who, one year ago were in the camps at home and abroad, serving, suffering and dying—that civilization might not perish from the earth, are worthy of all boundless gratitude and praise, and no gift of the people is too good for them. We believe a constant effort should be kept up to help place them again among us, in society and business. We welcome them to the farms and we will do what we can to help them begin life over as farmers, if they choose to do so.

We commend them "for organizing the American Legion." We see in it what we have seen in the "Grand Army of the Republic" and the "United Confederate Veterans," citizen soldiers for law and order, and a guarantee that civil and religious liberty shall be maintained in this land at all costs.

This organization recognizes that the strength and origin of the American Federation of Farm Bureaus has been achieved through cooperation with the state and federal departments of agriculture, upon a sound educational program of local work.

We declare it to be our purpose to continue such cooperation in the future and that neither business enterprise nor legislative activity should diminish such cooperative educational activities.

We urge the strengthening of the county organization financially and otherwise, so that capable men may be employed to manage the work of the county organization.

When state or federal government grants corporate rights to any organization it is incumbent on that government to protect the public through such regulating legislation as will best prevent favoritism, stimulate initiative and guarantee adequate public service.

We urge that as rapidly as possible all corporations doing interstate business be under federal charter and all other corporations be incorporated under the laws of the state in which their principal business is located.

We are opposed to government ownership of public utilities. We demand the early return of the railroads to private control, under such conditions and regulations as will render adequate service at just and equitable rates. We particularly demand immediate attention to restoring the efficiency of livestock and other perishable transportation, both in car equipment and train schedules.

Recognizing the economic law that impels the consolidation of business we proclaim that relief from the extortion of monopoly in manufacture and commerce is to be found in cooperation, in enforced publicity of business records, and a just graduated income tax rather than through interference with the economic law upon which great industries are founded.

We recommend such regulation of all purveyors of foodstuffs, including packers, wholesale grocers, commission men and all similar industries, in such manner as will be just and fair to producers and consumers as well as to the industries.

We demand strict economy of public expenditures in all departments of government, the cutting out of such customs in transaction of public affairs as add expense and delay rendering efficient service, and the discontinuing of all departments or employes which are not rendering efficient service.

Where service is needed and actually rendered we favor appropriations adequate to meet that service. We do commend the extension work of the department of agriculture, through the land grant colleges of the several states.

We commend especially the bureau of farm management, department of agriculture, and we believe the work of the bureau of markets and bureau of crop estimates should be vitalized and adequately supported to meet the needs of agriculture.

We deny the statement of some congressmen that farmers demand free seed distribution and condemn the practice.

With few exceptions in the past 40 years the farmers' sole profit has come from unrestored fertility taken from the soil and from long hours of

Continued on Page 754.

Agricultural News Notes of the Pacific Coast

Northern California

Hayward has voted $320,000 for civic improvements.

The state university wants $15,000 for a farm gymnasium.

A Chico man has invented an almond cracking machine.

Orland, Glenn County, will ship 12 cars of oranges this season.

Colusa County has 49,000 acres of rice which produced 1,000,000 bags.

The price of eggs in Petaluma fell one cent a day for all of last week.

The Benicla, Solano County, schools are closed by an epidemic of diphtherla.

A shingle mill is being built at Three Chop, near Willits, Mendocino County.

Near Meridian, Santa Clara County, 210 acres of rice averaged 61 sacks per acre.

One rancher near Richvale, Colusa County, lost 50 hogs from cholera in one week.

The poultry association of Petaluna handled 20,000 cases of eggs during September.

A prominent poultryman at Petaluma says eggs will go to $2 a dozen before spring.

Sutter County peach growers will discard Heath Cling and Phillips Cling for other peaches.

Ukiah, Mendocino County, has a valuable chrome deposit which is being mined and marketed.

A row of big shade trees in Durham, Butte County, saved the town from a disastrous fire recently.

Twenty cars of oranges will be shipped from the Mills orchards at Hamilton City, Glenn County.

A. F. Swain of the University of California says California has 180 species of plant lice or aphids.

A fruit dehydrating plant will be erected at Hamilton City, Glenn County, and possibly a cannery.

The California Fruit Exchange has bought the Davis Box and Lumber Company's plant at Mohawk, Plumas County.

The first carload of oranges sent east from Northern California was from the Nimbus ranch, Sacramento County.

Sonoma County has issued a booklet entitled "Agricultural, Industrial and Scenic Resources of Sonoma County."

Around Tarko, Sutter County, there are tens of thousands of sacks of beans in the field, for which there is no storage room.

When a building burns down at the state colony at Durham a building bee is held to provide free labor for the erection of a new one.

Aikuku rice on the Christensen and Burmester ranch, Colusa, yielded 50 bags to the acre on 400 acres. A bunch of heads averaged 381 kernels.

The directors of the Colusa County Agricultural Livestock and Fair Association met at Williams on November 19, elected officers and perfected arrangements for the county's biggest fair.

The Callfornia Tractor and Implement Associatlon met in San Francisco, November 15, and decided on holding many small demonstrations during the year, rather than a few big ones.

Central California

The new evaporated milk plant at Tulare is completed and working.

The average price received for Tokays this season was $2,279 a carload.

Fresno has bought $750 worth of Poland China hogs for its municipal farm.

Orange picking at Porterville, Tulare County, is held up by car shortage.

The three Tulare creamerles had a combined payroll of $208,540.35 for October.

A plant to grind lime rock for fertilizer will be built at Salinas, Monterey County.

On the wharf at Monterey are 9,000 boxes of apples waiting for a ship for a week past.

Watsonville reports 15,000 to 20,000 sacks of potatoes being harvested from 100 acres.

Last spring Lodi growers asked 5,000 cars for the grape crop; 9,500 cars were shipped.

Hogs sold at auction at Turlock, Stanislaus County, last week brought $16.10 per hundredweight.

Onion growers on the San Joaquin delta lands near Stockton have cleared $1,050 an acre on this year's crop.

There are about 1,000 cars of apples to go from the Pajaro Valley, with a serious car shortage at present.

Residents of that part of Merced County lying north of the river are seeking to be joined to Stanislaus County.

Ranchers about Modesto are seeking to force the county supervisors to allow them to vote on an irrigation district.

The fruit growers of Cupertino, Santa Clara County, organized November 22 and will canvass the district for members.

Rabbit raisers met at Hayward, Alameda County, and petitioned the state university to institute a rabbit experiment station.

Livingston, Merced County, has shipped 323 cars of grapes this season and 18 of sweet potatoes during the last week.

A cannery at Lodi, San Joaquin County, put up 120,000 cases of fruit: Peaches, 50,000; tomatoes, 40,000; apricots, 30,000.

A Santa Cruz grower picked $436 worth of raspberries from a quarter acre. The varieties were St. Regis and Superlative.

The Almond Growers Association has on hand 160,000 almond trees which it will plant in the southern part of Monterey County.

The state egg laying contest started at Santa Cruz on November 15 to last one year. There are 40 pens from various parts of the state.

The Californla Orchard Company, composed of Ventura County men, will plant out 1,500 acres of apricots near King City, Monterey County.

The California Prune and Apricot Growers have sent out a notice that they need 20,000 more acres of prunes and 6,000 additional acres of apricots.

The San Jose plant of the Californla Cooperative Cannerles handled this season 5,882 tons of peaches, 5,913 tons of tomatoes, and 1,637 tons of aprlcots.

Southern California

Oxnard will soon build a new city hall.

The Imperial Valley is shipping grapefruit.

Cotton seed in Fertilla, Riverside County, is selling for $63.50 a ton.

Anahelm has a city manager now, the new plan being adopted November 20.

The Westgard ranch near Brawley netted $3,500 for apricots from 40 acres.

Red spider is very troublesome in orange orchards of the Pomona Valley.

Orange, Orange County, will install ornamental lights to the value of $18,000.

A load of six bales of cotton sold last week at Blythe, Riverside County, for $1,650.

The cannery products of Pomona for 1919 are estimated to be worth $2,000,000.

The California Bean Growers Association has sold 350 tons of beans to go to Europe.

The Hemet-San Jacinto Growers Association asks local farmers to grow more peaches.

The Los Angeles Poultry Association will hold its 22nd annual show December 7-10.

Mealy bugs are infesting celery in Los Angeles County, having found a new host plant.

Fallbrook cast 238 votes for the San Diego County road bonds and not a vote against them.

A short course in beekeeping will begin at Riverside, December 1, and last the entire week.

The Yucaipa Apple Growers Association had shipped east 75,000 boxes of apples to November 15.

Up to November 20 Palo Verde Valley cotton had brought $1,700,000, this on about one-third of the crop.

The lettuce growers of the Imperial Valley will ship about January 10 but spinach will be ready December 15.

The Coachella Valley claims it is 102 cars short of the number necessary to move the waiting produce.

The Yucaipa Apple Growers have finished shipping and will outline next year's work at a meeting on December 6.

The Anaheim Walnut Growers Assoclation handled 550 tons of nuts this year as agalnst 280 tons last year.

Southern California real estate dealers say the heaviest call for rural realty is for fruit bearing orchards of two or three acres.

On November 21 the Wineville section, between Riverside and Ontario, experienced the heaviest sand storm known in that section.

On December 10 through Pullman service between San Diego and Chicago will be instituted on the San Diego and Arizona Railway.

The Pomona "Pageant of Progress," staged at Pomona, Los Angeles County, October 30, cost but $2,500 and will be repeated next year.

The Imperial Valley will have the biggest celebration in its history December 5-6, in honor of the opening of the San Diego and Arizona railway.

The Coast and General

South Texas has over 15,000 acres of cabbage.

Cotton at Chandler, Arizona, sold last week for 86 cents.

The Hawaiian pineapple production for 1919 is valued at $22,500,000.

Washington apples are going East in heated box cars with attendants.

The British Columbla potato crop is at least 15,000 tons shorter than that of 1918.

Japanese wholesale commission men in Portland, Oregon, have organized an exchange.

The federal government will sell 500 farms at auction in Yuma, Arizona, December 10.

The October prune festival at Vancouver, Washington, is to be made a permanent affair.

A frost proof apple warehouse was built at Omak, Washington, with 150 tons of baled hay.

Hood River, Oregon, is storing apples in all unused buildings, churches, church basements, etc.

Owing to flood conditions the early cabbage crop in the lower Rio Grande Valley will be a failure.

Yakima, Washington, fruit by-products experts found frozen apples contain nearly one per cent alcohol.

Long staple cotton sold at Phoenix, Arizona, last week for 86 cents, an advance of 30 cents over last year's price.

Nearly a thousand acres of new land about South Bend, Washington, will be planted to cranberries in the spring.

Apple pickers in Grandview, Washington, district received six cents a box and many earned from $75 to $90 a week.

The apple packing record: Pearl Saltzman, of Hood River, Oregon packed 140 boxes in four hours and 40 minutes.

At Fairbanks, Alaska, 2,000 bushels of wheat were grown this year and in a few years the crop will no doubt meet the demands.

Fifty per cent of the wheat grown in Walla Walla County, Washington this year was of hybrid varieties originating at the state experiment college.

Early frosts in the Salt River Valley of Arizona have probably not injured the cotton. It is believed that it will hasten the opening of late bolls. Up to November 5 it was estimated that not more than 35 per cent of the crop had been picked.

L. M. Harrison, field agent for the United States bureau of crop estimates, has estimated the yield of long staple cotton for Arizona for the present season to be 46,000 bales; short staple, 24,000. He also reports the average yield of corn for the state to be 33 bushels and that of grain sorghums 35 bushels.

An association of fruit growers has been organized to pack and handle citrus and other fruits for Arizona growers. I. de R. Miller of Phoenix is president. Practically all the citrus fruit grown in the Salt River Valley will be handled through this organization, which includes the Arizona Orange Growers' Association in its membership.

Frost Control and Related Factors

By J. C. Whitten Before Fruit Growers at Chico

HERETOFORE we have thought of protecting plants from cold only by direct methods, such as covering or sheltering the plants or by orchard heating, to raise the temperature of the surrounding atmosphere. This conception was based upon the accepted belief that a given kind of plant inherits a given degree of hardiness; that there is a "critical temperature," above which the plant will live without injury, and below which the plant will be injured or even die. Certain kinds of plants are notably hardy or resistant to injury from cold; others are notably tender and subject to injury, even in relatively mild climates.

We now know that while the above factors are true, in part, they do not explain the whole truth in determining the resistance of a plant to cold or drouth or heat or to any other environmental influence that may favor or oppose the health and safety of the plant. To emphasize this statement we only need call attention to the fact that a given variety of fruit tree may safely endure low winter temperatures while it is dormant, that it may be injured by a mere frost after it has started growth in spring, and that a sudden frost may kill it after it has gotten into the accelerated growth of the warmer summer.

The state or condition of a tree at a given time; its degree of ripeness and rest, or its degree of activity and growth, govern largely how much cold or other unfavorable influence the tree may safely endure.

We should get in mind the fact that a fruit tree is a living, sensitive, plastic, shapeable thing. In developing its growth it responds to every outside influence. Every cultural practice, such as pruning, fertilization, tillage or irrigation, applied to the tree or its soil, causes a response which makes the tree either hardier and more resistant or tender and more susceptible to injury. Let us understand why.

First, let us outline the more important phases of the annual cycle of growth and development of a fruit tree. The tree puts out its leaves and blossoms in spring. This new growth is supported by plant food reserves (mainly starch or sugar) stored in the tree. Except for the presence of this stored reserve of plant food the tree could not put out its leaves.

As soon as the green leaves are put out they become the source in which further supply of plant food is elaborated (or digested) to supply the daily growth and development of the tree and its fruit. Crude sap, taken in by the roots, is helpless to build new tissue or support further growth until it is digested in the leaves. From the leaves the digested plant food is distributed through the growing layer to all parts of the tree, where it builds up new growth. Digestion of plant food can go on in the leaves only in the presence of the green coloring matter and of sunlight. Crude plant food is carried to the leaves and digested plant food is distributed from the leaves, dissolved in water or sap.

The main length growth of branches and the formation of additional leaves normally should take place during the first few weeks of spring and early summer. So long as plant food, digested daily in the leaves, is being used up largely in promoting rapid length growth of branches and formation of more leaves, just that much less remains available to nourish and develop the fruit crop, the blossom bud for the following year and to store for winter in the tree.

As soon as length growth and leaf formation slows down, more digested plant food becomes available to accelerate rapid growth of the fruit, to develop blossom buds for the following spring and to store plant food reserves in the tree for the coming winter and spring. This emphasizes the desirability of spraying for red spider and maintaining green, healthy leaves to digest plant food throughout the summer and fall.

Studies made at the Missouri experiment station show that normally the sap of a fruit tree is least concentrated (contains the least sugar and digested plant food) during the period of rapid length growth in spring and early summer. Sap becomes more and more concentrated after length growth ceases. The supply of plant food reserves becomes greatest as the tree goes into winter condition.

The earlier a tree finishes its length growth the more concentrated its sap becomes and the more abundant its supply of plant food reserves. The more concentrated its sap, the more cold the tree will stand either in winter or during spring frosts. In one plot peach trees which had continued rank length growth until frost had all their flowers killed on a night the following spring at a temperature of 27 degrees. The following night the temperature dropped to 22 degrees. An adjoining plot of trees which ceased length growth early, but which maintained healthy mature leaves until frost, endured this lower temperature safely without injury to their blossoms.

The merits of the new system of pruning, now being advocated, are better understood in the light of the above facts. The prominent feature of the former standard system of pruning is that the trees are severely headed back each winter. As a result rank new growth is stimulated at the top of the cut-back branches. This rank, tender growth continues to lengthen and to make new leaves throughout practically the entire summer. This prevents early storage of plant food reserves and concentration of sap in the tree.

In the new system of pruning, the main limbs are established as early as possible. Once they are established they are not subsequently headed back. They are pruned by thinning out surplus limbs. Not being headed back their length growth slows down. Length growth ceases early and terminal buds form. Storage of plant food reserves begins early. The tree accumulates a more concentrated sap. Better development of fruit and fruit buds becomes possible. The tree becomes more resistant of cold.

Trees severely headed back call for

Continued on Page 752.

Four Cents Out of Sixty

By Frank T. Swett Before 52nd State Fruit Growers Convention

SIXTY CENTS for a can of Bartlett pears? Good-night! So said Jones to the grocery clerk. "What's the idea? I used to buy the same brand for 30."

Jones is a successful business man of San Francisco. Mrs. Jones had phoned his office that afternoon: "Company for supper. We haven't a bit of fruit in the apartment. It's too late to order. Now, dearie, call in at Goldberg Bowen grocery and bring home a can of nice Bartlett pears."

Jones is a man who wants to be shown. He asked the clerk, "What's the reason of this raise?"

"Why, Mr. Jones, don't you read the papers? Senator Brown of Los Angeles, Mrs. Cleverdon of Berkeley, Secretary Connelly of the Grocers Association and a whole bunch of mayors are agreed that the farmers are profiteering on us city guys, and wicked Weinstock has organized them into terrible trusts to sting the consumer!"

"Believe me," said Jones, "I'm going to investigate," as he jumped into his Pierce-Arrow and sped home to the apartment.

The next day he talked with a banker on that painfully popular theme, High Cost of Living.

"Inflated currency, diminishing dollar, excessive demand for all foods, restricted production of commodities due to the strike habit—the customary aftermath of all big wars," said the banker. "Mark Sullivan said it in Collier's Weekly in his remark that 'the dollar should be renamed and designated 'dollarette.' We're all trading in 50 cent dollars. Now, Jones, your 60 cent can of pears is really a merely old fashioned 30 cents."

"This is too abstract for me," said Jones. So he asked a prominent canner who recently announced in a financial letter to the press that canners had all made phenomenal profits this season; but now that it had all been sold the price was really too high and that the remedy next year would be to pay the fruit growers less for their fruit. "Growers must not expect such exorbitant prices next season. The canner told Jones all about higher cannery labor costs, etc., but said nothing about higher costs on the farm.

But Jones was thorough. He had been told at second hand about farmers' combinations. He wanted to beard one in its den. He bravely ventured into the office of the Pear Growers Association.

The retailer had passed the buck to the "farmers' combine," the canner had followed suit. Mayors and supervisors had emphatically berated the far off farmer. Was this solution correct?

Secretary Hamilton was at his desk. Said Jones: "I'm going to ask you some important questions. While I'm making double the money I used to, it takes it about all to live comfortably. Shoes, clothes, nurses, housemaids, rent, theater tickets all have gone up; and it's most aggravating to pay more for food. Why did the grocer charge me 60 cents for those pears? Why don't your association sell the fruit cheaper to the canner? I'm afraid the growers are profiteering. Defend yourself if you can!"

"All right," said the secretary. "Let's analyze your 60 cents. When you paid, you laid on the counter a four bit piece and a dime. What did the grower get from the four bit piece? Not one penny! The grower got the dime. Out of that dime he paid for a whole year's work in the orchard, taxes, irrigation, spraying, plowing, tractors, compensation, insurance, spray materials, distillate, housing for employees. The owner and his family lived and worked on only four pennies of your dime. Six cents he paid out for employees and orchard expense. If the philanthropic grower could afford to work for nothing and board himself, then pears might sell four cents cheaper, or 56 cents. Now, Mr. Jones, if you are looking for profiteering will you seek it in the growers' four cents or in the other 56 cents? Without your dime production would stop short."

"You surprise me," responded Jones. "I can hardly credit your data."

"Here are the facts," said Hamilton. "The association sold 14,000 tons to canners at $85 a ton. A ton will make from 37 to 40 cases of canned pears, or considerably more than 850 cans. At ten cents a can this is $85."

"The deuce you say," said Jones. "I don't begrudge the dime, for I realize the production must continue. But where did my four bits go?"

"That went for canners' boxes, freight, stevedores, deck hands, coal miners, oil men, draymen, cold storage, cannery wages that are three times as high as formerly, high freight rates on sugar, tin and labels and cannery cases, higher wages in lumber camps, rent, clerk hire and delivery for the retailer.

"The canner sold the case of 24 cans for $8.50. When retailed the same case cost consumers $14.40. Each can carried a burden of 25 cents in its trip from the canners' warehouse to the consumer, or a total of $6. When the grocer took your can from the shelf and handed it over the counter, his 20 per cent, earned in two minutes, cost you 12 cents more than the original growers' price on the pears."

"Robbers," said Jones. "Walt," said Hamilton. "Doesn't Mrs. Jones usually telephone the store and have goods delivered way out at your aaprtment and charged? The grocer's price is set according to customary expense and not by the exceptional oc-

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

An International prize winner and sire of other California prize winners gives us a look at his handsome face on cover of this issue. California's fame as a livestock state has been increased by the selections made by Prof. True and his corps of helpers at the university farm. This is proven by the telegram from Chicago which is given on this page. More will be given next week of California's winnings at the International.

FOUR CENTS

Let the producer who has ready somewhat of apology because of the profiteering practices of which he is accused read Frank Swett's "Four Cents Out of Sixty" on page 749. Just a homely story, that is all, but full of facts, or at least of one big fact.

PEACH BLIGHT

Before December 15 spray for peach blight. It will need another spraying next spring, but whether you do or do not spray them, spray now and spray at once. This pest is the same fungus that causes shothole in the apricot, prune, etc. The lime-sulphur 1-10 does the work, also reduces San Jose scale and other pests which may be infesting the tree.

Don't grow pests; grow fruit.

STILL DRY

The northern end of the state has received a limited supply of rain within the past week. It did not reach the Tehachapi in any quantity, however. Fields of grain which had started are now yellow and many acres are completely past redemption. Reseeding will be necessary. Orchards are being irrigated and cover crops will be short and of little value unless it rains soon. As may be noted by the weather report on Page 775 Los Angeles and San Diego have had more than their normal to this date, but practically all of this fell in the month of September and so far as dry farming crops are concerned was of little value.

REMARKABLE WINNINGS

The Californian who has never attended the great International at Chicago and traveled for miles through the aisles of the great exposition buildings until bewildered by the multitude of the finest of pure breds from every state in the Union can hardly realize the honors which California has won as shown by the telegram from Mr. Royce. Of course, we would hardly be human if we did not wish for more and feel that California was justly entitled to at least two or more grand championships. The university farm did at one time bring home what no other institution ever did from an International—two grand championships in one year. Hence, we all have high expectations when Prof. True and Aleck start for the International, and while, as we say, we want more, we must also add "Congratulations to California's breeders."

CALIFORNIA'S WINNINGS AT INTERNATIONAL

The Cultivator's livestock editor is in Chicago attending the great International Livestock Exposition. He will later give the details of the exposition, likewise illustrations. As we go to press a wire comes from him indicating California's place in the livestock world. It is a great honor to win at the International. Here is Mr. Royce's wire indicating some of California's honors, some of which are due to Prof. True's selections and Alex. McDonald's feeding at the University Farm; others to California's breeders.

University Jock 3rd, first senior yearling and champion Angus, champion yearling and reserve grand champion.

University Jock 4th, first senior Angus calf and reserve champion Angus.

California Majestic, first senior Shorthorn Calf.

California Prime Duke, first junior yearling Hereford steer.

California Grizzly, third junior yearling crossbred steer.

California Perfect Lady, ringside choice for grand champion, third senior crossbred calf.

Shropshire lamb, first.

Hampshire lambs, first, second and third in class and first on pen.

Southdown lambs, first, second and fourth; first on pen and champion Southdown.

Grade lambs, first, second and third and first on pen.

Yearling grades, third in class and third on pen.

Duroc senior pigs, seventh and second on pen of three.

Junior Duroc pigs, second and second on pen.

Yearling Polands, fifth in class and fourth on pen; Bassett, fourth and fifth with senior pigs and second on pen. Poland show strong.

California made a great showing and only hairline decision prevented having grand champion steer.—Royce.

SPRAY GUN

Some 25 years ago we had a fairly liberal education and experience in spraying San Jose scale, brown, black, red, yellow and several other shades. It was with one of the latest improved pumps of that time. Of course, it was hand operated, as were all pumps, but it did have a new and large air chamber. It was suggested that a pressure of 100 to 150 pounds be maintained, but the first of these pumps had no indicator or pressure guage so that a husky pumper occasionally had the experience of blowing up the pump. The spray was applied by using long brass rods reinforced with bamboo, on the end of which were small brass "Cyclone" nozzles. The spray or fog area was little larger than a lady's fan, and each twig of a peach or apricot tree was followed in the effort to do perfect work.

The other day we saw a modern day outfit. It was different. Gas was doing the work, instead of five workmen there was one, while instead of the long rod the "spray gun" took its place. The mechanism permitted directing dense fog or a stream of more condensed spray to the top of a 20 or 30 foot tree. It was efficiency—a good example for the lax orchardist who hopes the heat or the cold or the drouth or the wet or something will occur to destroy his pests.

Don't wait. Clean 'em up.

AMERICANIZATION

The country is really waking to the fact that Bolshevism, disloyalty, even anarchy is being preached and worked for in this country as never before, and probably even to a greater extent than in any other country. This awakening is causing in all sections the formation of an organization which has for its mission the creation of a more loyal spirit and increasing the number of true Americans. The Los Angeles Americanization Fund Committee send out a statement from which the following facts are gleaned:

Bolshevism, I. W. W.ism—syndicalism—the doctrine of the red flag—is spreading its poison everywhere in our country. A determined organized effort to overthrow our government is being financed by those forces in Europe which have wrecked Russia, and which were against us in the recent war. Lenine sent ten millions in gold to this country to be used to spread the Bolshevist doctrine here. The I. W. W.'s here are our Bolshevists—the Reds.

The I. W. W.'s claim 7,000,000 in America and 100,000 in California. They have in the neighborhood of 250 magazines and periodicals preaching their doctrines. They are directed and controlled by paid managers.

Records seized in raids on their headquarters reveal plots against our government almost unbelievable. A most dangerous and insidious propaganda is flowing through various channels, aimed at tearing down the very bulwarks of our Americanism and civilization.

Citrus Growing In California

A 5/16 of an acre plot of Orange Trees at Corona, fertilized with

NITRATE OF SODA

and acid phosphate at 320 lbs. of each per acre, yielded at the rate of 411 boxes of high quality fruit. A plot alongside, fertilized without Nitrate, gave a rate of yield of only 322 boxes per acre of inferior fruit. This difference of rate of yield of 89 boxes per acre shows an increase in value of produce equivalent to $324.85.

100 lbs. of Nitrate of Soda in this case added a rate of profit to the grower's income of $101.52 per acre.

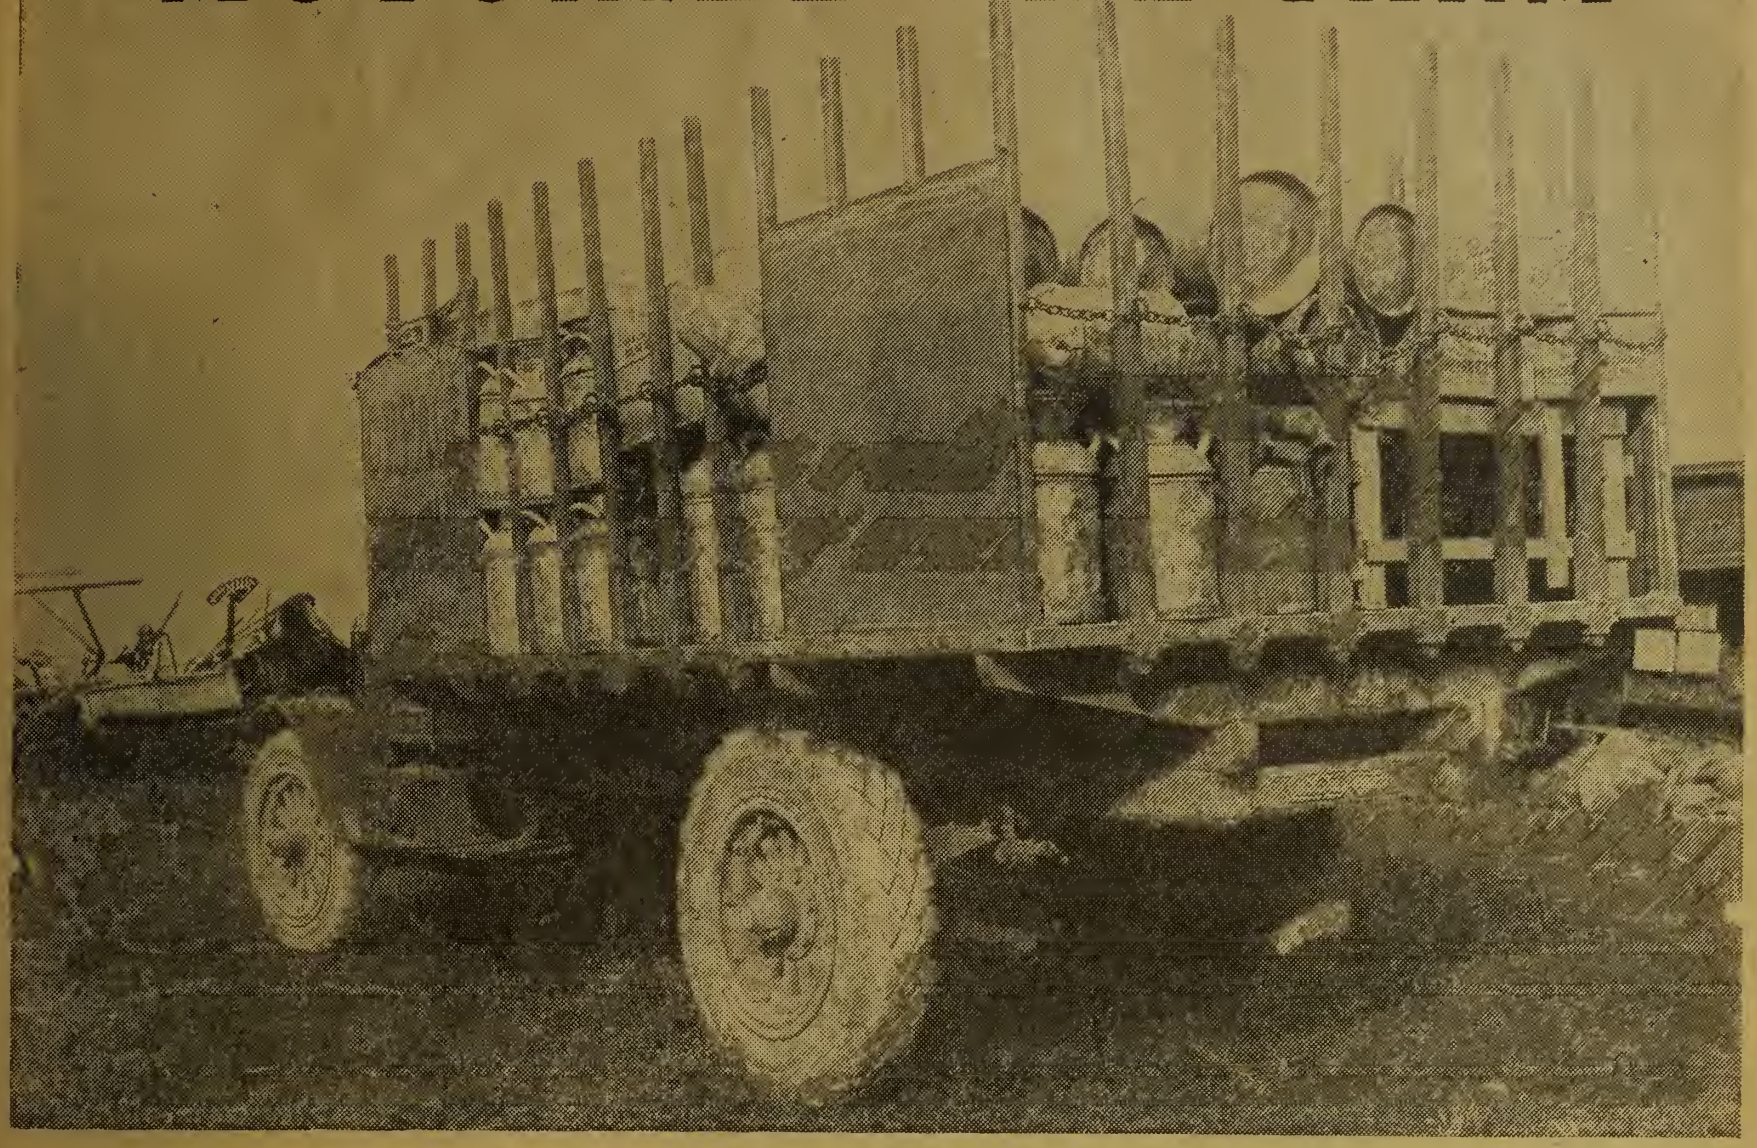
MOTORIZE THE FARM



AFTER doing much of the market hauling of thirty-two farmers around Eden Prairie, Minnesota, with a motor truck on Goodyear Cord Pneumatic Truck Tires, Mr. C. P. Page states: "I would not use solid tires again under any consideration. Hills, mud and storms don't stop the big, tractive Goodyear Cords. Their cushioning is saving truck repairs and depreciation. They also are saving gasoline and oil. I now haul more milk and other loads in less time, find the work far easier, and note that the pneumatics save our roads. Several people have adopted them as a result of my experience with Goodyear Cords."

THE experience described above affords an excellent example of what pneumatic truck tires are accomplishing for farmers. Every limitation hitherto placed on the farm use of motor trucks by solid tires has been removed with the perfected pneumatic tire. For this reason, Goodyear's pioneer work in developing cord pneumatic truck tires has been extremely opportune; it has led to the more extensive use of farm trucks during a serious scarcity of farm labor. Now, farmers are finding it extremely advantageous to employ Goodyear-Cord-equipped trucks with other time-saving motor units and, thus, to motorize their work quite completely. Special information concerning the use of pneumatic-tired trucks on farms may be obtained from The Goodyear Tire & Rubber Company, at Akron, Ohio.

Pruning at Burbank

By Ernest Braunton

DR. J. C. WHITTEN'S pruning demonstrations in Southern California came to an abrupt close November 22 when he was suddenly recalled to Berkeley. It seems that two of Dr. Whitten's staff in the division of pomology are in the hospital, another has resigned, and the field classes in horticulture began at the university farm at Davis on the 24th. To say this division is badly upset is to describe present conditions very lamely.

Farm Adviser Hodgson of Los Angeles County, however, filled the breach very well, being a larger man, physically, than Dr. Whitten. The Burbank meeting was held at the ranch of L. B. Doan, a mile south of the town. There Mr. Hodgson pruned one tree each of plum, peach and apricot, the plum having been pruned by Dr. Whitten last year. During the demonstration Mr. Hodgson told the assemblage the why and wherefore of pruning, some of which was as follows:

"The principles underlying this system of pruning should obtain no matter what your style of pruning. It has been tested for five years at the university farm at Davis and the results have been highly satisfactory. The old system of pruning was considered good before these principles were understood. In fact it had developed to a higher standard in California than elsewhere and was called the California or vasiform system. People came to California to study our methods.

"We were told that the heading back system was to get stockier, more vigorous trees, but we found out through an extensive series of experiments at Davis that the trees so pruned were the smallest, that by slashing away 'firewood' each year we really reduced the vitality. Again, we took trees of three leaders, cut one leader back two-thirds, one one-third, and the other was left unpruned. The uncut leader in the fall was twice as large as the one cut back two-thirds and the other one was intermediate. On pulling up the trees it was found the roots were developed corresponding to the top, those on the side of the unpruned leader being twice as heavy as those below the heavily pruned leader. Cut out small branches to thin only and cut back most of the others to stubs so they will bear leaves not only to shade the trunk and limbs and bear fruit spurs, but the larger the leaf surface the more plant food is manufactured and no tree is vigorous when having a poor foliage crop.

"The leaves must stimulate vigor to back up the fruit buds which come in July and August and which must then harden and ripen to get ready for next season's supreme effort. If the storage of food is heavy it is thick with sugar and starch and evaporates slowly, therefore is largely consumed by the tree and is present to respond when the need is great. All know that pure water evaporates quickly. Add a little sugar or salt and evaporation is much checked. Fill the same pan with molasses and it will not evaporate during the entire summer. So much for the summer value of rich sap. Clear water freezes easily but add a little sugar or salt and many additional degrees of cold are necessary to freeze it. So the rich sap protects the tree in winter. And a heavy leaf crop is necessary to make and store this rich sap. Some of the evils due to heavy pruning are sunscald, wood rot, reduction of size and vigor, also reduction of fruit crop for first few years as it retards development of fruit spurs, each year's best strength going to feed the long upright shoots which we repeatedly cut away. It is not necessary to thin the fruit crop on young trees properly pruned, for nature is equal to their demands, but if we too much violate nature in beheading the trees, fruits would prove a heavy burden."

FROST CONTROL

Continued from Page 749.

more moisture or are less able to endure drouth during the following summer. The rank new branches and leaves are soft, tender and succulent. This condition continues throughout the summer. They evaporate much water. The rank growing branches and leaves toward the top are able to draw water out of the leaves and fruit on the twigs below whenever the water supply becomes inadequate in the soil. These rank growing parts above rob and shade out growth lower down on the tree.

Where the main limbs are not headed back rank length growth at the top of the tree is not stimulated. Shorter growth of branches is about equally distributed in branches up and down the entire tree. Length growth ceases early. The tree early attains a concentrated sap and stores plant food reserves. These slow growing limbs and leaves become firm in texture and exaporate but little water. There are no rank succulent upper limbs to rob or shade out the parts below. The leaves are not likely to draw water out of the fruit in time of drouth. The concentrated sap gives up its water less readily. Such trees will endure more spring frost or more drouth due to their better ripened or perfected tissue and their more concentrated sap.

Judicious summer pruning may be understandingly practiced. Indiscriminate summer pruning may severely weaken the tree. The removal of mature limbs which have ceased length growth, or of leaves that are healthy and firm, reduces the amount of plant food that may be digested and stored during the remainder of the summer. If the summer pruning is severe enough to induce the production of new, tender twigs and leaves, this draws upon the stored plant food reserves and results in a thinner, weaker sap, just when the tree should be storing instead of using up stored food.

Judicious summer pruning consists of the removal of any surplus water sprouts that are growing where they are not wanted. Any permanent limbs that are continuing length growth too late may be checked by clipping back. Dead, broken or diseased parts should be removed.

So long as trees can secure ample water to supply their leaves it is not desirable to reduce the leaf surface more than to check length growth of late growing limbs. If drouth is severe and trees are evaporating more water than can be supplied, evaporating surface may be reduced by judiciously removing the more tender, succulent parts which are least needed as permanent limbs of the tree. Tender, soft, new leaves evaporate many times more water than older, firmer leaves that formed early in the season. The older, firmer leaves, if healthy, and which take on a dark green color, are more serviceable in the elaboration f plant food reserve. The green, soft, succulent leaves on a tree have the power of drawing water out of the green, growing fruit during a dry time This is because the sap of the leaves is more concentrated (contains more sugar and plant food in solution) than that of green fruit. Once the fruit begins to ripen its juice becomes more concentrated and can draw water from the leaves when both leaves and fruit cannot be adequately supplied.

As a result green fruit often stands still in its development during a dry hot spell in summer. The leaves may show no sign of drouth if they can draw water enough from the green fruit. Any treatment, such as heading back in winter pruning, which favors rank succulent leaf growth, favors withdrawal of water from the fruit during dry, hot days. If, on account of inadequate water supply, the ripening fruit begins to draw water from the leaves and thus increases in size rapidly, the tree is unable to produce and store up adequate stored plant food reserves for winter and is less resistant to cold.

100 Cents on the Dollar

THE tractor that is really a 100-cents-on-the-dollar investment for the farmer is the tractor that can be used practically every day of the year, one that is 100% efficient, both on the belt and the drawbar.

The **International 8-16 kerosene tractor** meets the above specifications. The drawbar has a wide range of adjustment both up and down and sidewise so that the tractor will pull any machine or implement on the farm with equal advantage. The 8-16 pulley is so placed that the tractor can be backed into the belt quickly—so placed also that the belt doesn't rub against any part of the tractor nor drag on the ground. And 8-16 power is just right—neither too heavy nor too light—it *fits* practically any drawbar or belt power task on the average farm.

Aside from its adaptability for all-year-round farm work, the **International 8-16 tractor** is a 100-cents-on-the-dollar investment because of its exceptionally efficient and economical (kerosene) operation; because, too, you can always secure repair and expert service without delay through the 92 branch houses scattered over the United States. Your dealer—wherever he is—has a Harvester branch in easy reach.

If you are interested in a 100-cents-on-the-dollar tractor investment just write your name and address along the margin of this advertisement and mail to the address below so that we can send you full descriptive information of the **International 8-16.**

Thinning the fruit when the trees set an overload is important. A tree may not be able to mature an overload of fruit and at the same time furnish the plant food necessary to develop fruit buds for the following spring. Furthermore, the overloaded tree cannot store up an adequate supply of starch and sugar to render the buds strong and to endure frost or cold weather at blossoming time the following spring.

Spraying to keep down red spider or diseases that injure the leaves is important. Healthy leaves throughout summer and autumn digest and store plant food, giving a concentrated sap which enables the tree to endure cold at the next blooming period. If the leaves are injured and fall early, the tree cannot store up adequate plant food for winter, the sap remains thin and the blossoms subject to injury from cold the following spring.

Steady growth and development is much more favorable than intermittent growth. A soft, succulent, spongy growth in late summer or autumn should be avoided if possible. Such a growth uses up stored plant foods in the tree and prevents further storage before winter. This weakens the tree and favors injury from cold the following spring.

Whitewashing young trees during winter is a means of protection. We now know that the coloring matter in the bark of young trees can absorb heat enough from the sun's rays on clear winter days to raise the temperature of the buds and growing layer 15 to 30 degrees above the temperature of the atmosphere. This high day temperature makes the buds and growing layer of the tree active and tender. As the sun goes down the tree cools to atmospheric temperature in a few minutes. The cells of the plant which have become tender during sunlight may be injured by a sudden drop to the freezing point at night.

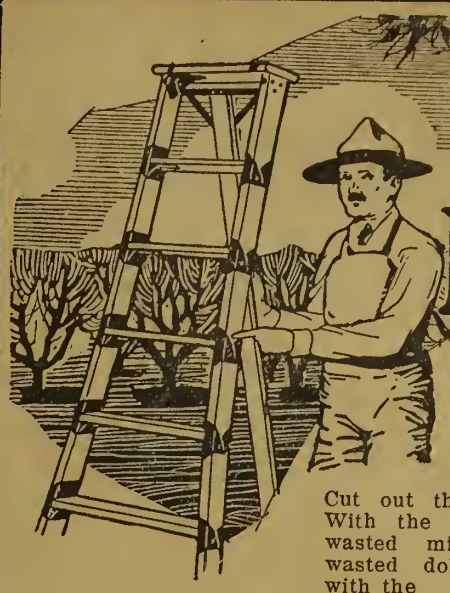
If the young tree is kept sprayed with whitewash during winter the whitewash reflects instead of absorbing the heat rays of the sun; the tree remains at atmospheric temperature or two or three degrees below during the day. The buds and growing layer remain dormant and are not injured by cold nights.

The fluctuating temperatures between day and night break the winter rest period of the tree. Whitewashing sometimes prolongs the actual rest period a month or even more. Fluctuating temperatures between day and night not only make the tree tender, but stored plant food reserves are actually used up and wasted. The tree which is protected by a good coat of whitewash retains a more concentrated sap with lower freezing point. It will stand more cold in spring due to its prolonged dormancy and its greater vigor.

A good whitewash which will stick may be made by using seven pounds unslaked lime, two pounds sulphur, one pound salt. These should be slaked together; the heat of the slaking lime acts on the salt and sulphur to make a wash that will stick. If a little skimmed milk is added to the mixture after it has cooled and when it is being diluted to apply to the trees, it will stick still better.

We now know that sunscald of young trees takes place mostly in winter though its drying effect does not show up until summer. In summer the growing parts of the tree are cooled by the water taken up from the cool soil and evaporated in quantity by the leaves. On a hot summer day of 105 degrees temperature, the temperature of a young tree which is evaporating water from its leaves may be somewhere in the eighties, which is a good summer growing temperature. Whitewashing in winter prevents sunscald of exposed parts.

Recent investigations are throwing some light upon what is taking place inside the tree. An understanding of factors which favor or oppose succulence or maturity of leaves and of wood; dormancy or activity; uniform or fluctuating growth; the storage or using up of plant food reserves; the fluctuation of winter and summer temperatures within the tree and the relation of cultural methods to modification of these factors will enable the thoughtful grower to handle his trees so as to oppose injury from frost and drouth.



Cut Pruning Costs!

Cut out the wasted minutes! With the high cost of help, wasted minutes mount into wasted dollars — Equip NOW with the

SECURITY KANT-WOBBLE LADDER

—the big labor and time saver. Patented steel cuff-bracket machine-wrapped around stile at each step-end, holds the SECURITY Ladder steady—positively cannot wobble—cuts out the endless running up and down ladder to change position. Makes pruning EASIER — plenty of working space on SECURITY Ladders gives pruner comfort and ease. I will ship two or more SECURITYS on approval at these prices: 8-ft., $5.40; 10-ft., $6.50; 12-ft., $7.80; freight prepaid. Pay after you examine and approve shipment. Order NOW!

20 Years Experience

In this Direct Connected

Motor Driven Pump

It's a pumping outfit that's built to save you trouble and delays—to deliver a large head of water with minimum expense.

Skill and experience developed through 20 years have been applied in design and construction.

So the "Bean" Universal is today the leading pumping outfit of this type.

Distance to water below surface of ground.....
Probable distance to water when pumping.....
If water is to be raised above surface of ground, how high? (Length and size of pipe line).....
Volume of water desired (Gals. per min.).....
(Inches) .....
If you have pit, give width..... length.....
depth.....
H. P. of motor or engine if you have that equipment.....
Give total depth of well.....
Inside diameter of well.....
Is well straight and true?.....
Is electric power available?.....
Name .....
Address.....
Rural Route No.....
321 Box.....

Needed Features

You need all the "Bean" features in your pump to insure pumping satisfaction.

—A generous water seal that entirely surrounds the shaft where it enters the case, avoiding loss of priming. No need to cinch packing so tightly that it cuts the shaft.

—Automatic water balance greatly reducing friction.

—Oversize outboard pulley, eliminating vibration.

Both suction and discharge adjustable at any angle.

Other advantages, too numerous to mention here, make this the ideal pump.

"Bean" Universal

USING GYPSUM

Many years ago the gospel of gypsum was preached so effectively that its use extended into all parts of the United States. This use was not always found as advantageous as some advertising gave reason to believe it should be, this doubtless because the user failed to inform himself as to his soil conditions and the need for gypsum in his particular case. Its use has decreased though the real advantages to be secured from it are still great.

Today gypsum is coming back, for its friends are not advertising it now as a complete fertilizer, or any fertilizer in itself, though it is known to contain sfficient sulphur and calcium to make it of real value to some plants on certain soil.

In the matter of using it on cover crops it is today recommended that where applied to vetch, clover, beans or peas the sulphur aids in the legume growth, and the legume growth turned under supplies nitrogen. A very common method today is to make application of ground rock phosphate and gypsum, this as a substitute for acid phosphate.

But perhaps the best of all uses for gypsum is that of an absorbent in stables or where there is possible waste of ammonia from manure. By using in this way the wonderful absorbing power of the plaster proves beneficial as well as the later application to the land. Again, as a corrector of black alkali conditions it has great advantage. We believe it was Ben Franklin who made the first effort to prove the value of gypsum by applying to certain sections and in certain designs on the field. It is now recommended that it be tried in alfalfa field or on blue grass lawn at the rate of, say, 500 pounds per acre. The best time for applying is probably during the early spring months.

IT SERVES THEM RIGHT

By G. W. Morrison

Many automobile drivers overwork the so-called "self-starter" by continually and unnecessarily using it, sometimes for several minutes. They might as well shout in a loud voice "I don't know anything about an automobile, but I'm going to make this —— engine start if I have to run this 'starter' all day."

Little do they realize that their battery is but a storage compartment holding only six volts of electric current and that the effort necessary to drive the dynamo, which rotates the fly-wheel and crank-shaft, operates the pistons for the suction of gas into the cylinders, and then compresses it, uses up just as much energy as if the engine were cranked by hand.

It would be exhausting to a person cranking by hand, so also is it exhausting to the storage battery. In consequence the six volts of electric current stored in the battery, which alone operates the "starter," rapidly drops to three volts, or less, and this very often is not enough to produce a spark if ignition current is supplied from the battery to fire the gas charge and make the engine "go".

It is all wrong to use the starter in such a way—yet this foolish thing is done every day by ignorant automobile drivers. Because of this nuisance the battery runs down, the plates buckle, and unending trouble, delay and expense follow. One cannot get more out of a battery than is put into it—nor as much.

AMERICAN FEDERATION

Continued from Page 747.

work and unpaid labor of women and children. We insist that these are legitimate factors in cost of food productions and must be so recognized by the commercial interests and general public.

We assert the farmer is entitled to a just profit on cost of production on all products, with these items properly accounted for, with due consideration to the hazardous risks he encounters and with a wage allowance for his own labor and ability commensurate with that received in other occupations.

We express our appreciation of the act of congress in repealing the so-called daylight saving law.

We believe Armistice Day should be made a national and international holiday, and request proper national and international authorities to so act.

We suggest that since Thanksgiving is not an anniversary of the event commemorated and since the date generally observed is so near Armistice Day, that national and state governments legally fix Thanksgiving Day coincident with Armistice Day.

We are unqualifiedly in sympathy with the government's determination to suppress radicalism, and we lend our full support to all efforts to rid this country of Bolshevism and all other anarchistic tendencies.

We especially deplore the outrage committed at Centralia, Washington, and we trust that our government has already taken firm steps to punish the perpetrators of this crime and to prevent any occurrence of like outrage on our flag and our citizens in the future.

The executive committee of the California Tractor and Implement Association has made report to members in effect endorsing a report issued by the demonstration committee appointed some time ago. But it suggests that the work laid out is on too ambitious a scale for a committee and recommends the employing of George Collins to conduct the series of demonstrations. The committee asks that if the plan is endorsed a fund be raised for the purpose of maintaining a San Francisco office. In lieu of that expense, if it is not desired, the committee asks each member to volunteer services as a member of a managing committee. The plan of the executive committees was accepted in the meeting of the association held on November 15. Further details will be worked out at another meeting of the entire membership, to be held at the Palace Hotel, December 27.

FOUR CENTS OUT OF SIXTY

Continued from Page 749.

casions when patrons pay cash and carry home. The grocer is lucky if he nets four per cent profit after all expenses are paid."

"Just one more question," said Jones. "How about the expense of this association? Isn't it just one more expense between producer and consumer? What does this cost and who pays it?"

"It came out of your dime," said Hamilton. "In 1919 the business of 450 growers, producing about half the pears of California, was handled at an average cost, not of 20 per cent, not of ten per cent, nor of five per cent, but the almost microscopic and infinitesimally small charge of two-thirds of one per cent on the growers' whole output. Canners used to have scores of buyers in the field at an expense of $1.50 to $2.50 a ton for the fruit purchased. This needless expense is practically eliminated. One man, the manager of the association, does all the selling at minimum expense. And, furthermore, out of the association charge to growers of 90 cents a ton on the cannery pears there is provision for inspection, shipment, billing, collection and remitting, the grower, and including also adequate financial insurance. This is credit indemnity insurance. Should a cannery fail to pay the association the American Credit Indemnity Company pays, just like fire insurance."

"You astonish me," said Jones. "How do you get by so cheap?"

"Because this is modern scientific cooperative marketing. We have had the assistance in organizing of a man who is one of California's most successful merchants, a man who has studied marketing the world over, a man who has done more to encourage food production and to stimulate California agriculture than all others put together—State Market Commissioner Col. Weinstock."

"But don't associations stifle competition?"

"On the contrary they encourage competition of a new kind, constructive, not destructive. Speculation is lessened or eliminated. The grower encouraged, bends every energy in competing with his neighbors for better quality and increased production. New field and orchard lands are cleared and planted. You consumers want more to eat. Better methods mean better crops. Better spraying and cultivating mean better quality. Maximum production means reasonable prices. This association has directors meetings monthly. In winter and spring these meetings are held in the different fruit districts. Growers attend. Last week 69 growers of Santa Rosa met our directors from other sections and a day was spent in planning with the assistance of scientific experts, better cultivation and spraying methods. This means increased production of better fruit for you, Mr. Consumer. In a few years California, instead of 100,000 tons of pears, will produce 300,000 tons. Does that sound good to you? Have we hampered canning and drying by association prices? No. This season the greatest pack of pears on record, over 30,000 tons, was canned. Twice the usual tonnage was dried. Practically none went to waste. The smallest canner can buy his little supply, perhaps only 40 tons, at the same price and of the same quality as the buyer who buys 5,000 tons. Does this encourage him to put up a full pack? I guess yes. One canner, who had ordered 400 tons before we named a price, upon being notified of the price on June 2, came to the office the next day. 'Increase my order to 900 tons; your price is reasonable, and we are going to strain every effort to put up a larger pack than ever before. We marketed this year $1,100,000 of pears without the loss of one cent in bad accounts. Canners have dealt with us squarely and honorably. We have stabilized the Eastern markets for fresh pears by diverting surplus, which formerly used to bring about a regular disastrous slump in August, to driers and canners. We are a group of 450 growers pulling harmoniously together, trying to serve faithfully producer, manufacturer and consumer. We've made a good beginning in our first two years. We can do more and better work in future years. Other growers associations are working along similar lines."

"I'm glad I called," said Jones. "Next time I hear earnest but misguided and ignorant politicians roasting the producer and his marketing associations I'll call his bluff and demand less eloquence but more facts."

And he departed, feeling better.

Farm Light and Power

HERE is a farm light plant that you will like—for its economy and utility. Just remember that even this exceptionally low price secures Fairbanks-Morse quality—design—workmanship and materials. Touch a button to start and another to stop.

The low speed engine with ball bearing dynamo assures long life—less attention—lowest possible maintenance cost. The 40 light "F" farm plant comes completely mounted on one base with our famous "Z" *kerosene* engine, which in addition to electric lights gives mechanical power to operate a washing machine—cream separator—churn—or other machines. Instrument board is conveniently mounted over the dynamo. Unquestionably the biggest value in the farm lighting field—and you get the added advantage of mechanical power.

There is a dealer near you who will carefully explain all details and also prove that it is the one *practical* combination plant for which you have long been waiting.

The Cultivator Costs Only $1.00 Per Year

This Month in the Ornamental Garden

Southern California

By Ernest Braunton

THE "stern December" of other lands does not apply to California for in a normal season the rains have wakened the whole country into life and action and as Christmas approaches both garden and the wild hillside are bountifully clothed with floral beauty. December is the month wherein the autumn planted flowers bloom and seeds, bulbs and plants for spring blossoms are planted.

It is therefore a time of transformation. Just as we are with the year on the closing day—"off with the old, on with the new"—so is it in gardening. As the flowers are picked or fade with age, the plants should be pulled up and burned or composted, the soil enriched and thoroughly worked over and allowed to lie in a rough state for at least a few days so that sun and wind and rain may have a chance to aerate it for soil must breathe in order to stay "live" and be purified. Beds that are not to be planted until spring may also be now prepared and allowed to lie in a rough state until needed for crops.

Bulbs

This is the time for bulb planting and bulb harvesting, for dahlias and others that have run their season's course should be taken up and stored in a dry cool place until needed. Little care need be given, yet if you wish to keep them in splendid condition put them in boxes and cover with fine damp sand. The finer the sand the more slowly will it dry out and the more it excludes the air. As the sand dries the bulbs cure slowly, reserving all their vitality. Allow them to remain in the dry sand, without disturbance, until planting season. If your storage place is dry enough, dahlia bulbs may be held over for fall planting without reduction of vitality.

December is the last month in which you should plant Dutch or Holland bulbs. Later plantings seldom bring as good results. Put in anemone, cyclamen, daffodil, freesia, gladiolus (dwarf), hyacinth, ixia, iris (Spanish), lily, Montbretia, narcissus, ranunculus, and sparaxis. If you wish good spring blooms put these bulbs in at once, in well stirred soil, and if possible put a manure mulch on top. Water through this and do not cultivate.

Seeds

If you would have perfectly glorious sweet peas sow the seeds in the winter season, for peas are a cool weather crop and will not produce good results except the roots are kept cool. It matters little how hot the air if only the soil is cool and moist and in a finely pulverized condition. Growers of fancy sweet peas trench three feet deep in their preparation of the soil.

If you have never tried a bed or garden of native California wild flowers you should have one and sow the seeds at once. They are a magnificent lot, those grown from a 25 cent pacakge of mixed seeds. The writer has grown a patch 50 feet square from an ounce of seeds and had 22 varieties in bloom. If you will do nothing more in this line than sow California poppies in a variety of colors you will still have a flower garden that will be a joy in blossom time. Other seeds to plant now are: Alyssum, calendula, candytuft, calliopsis, forget-me-not, mignonette, nemophila (baby blue eyes), poppies, pansy, salpiglossis, snapdragon, stock, and a host of others. As a rule people are too timid in sowing seeds. Nearly all common annuals will endure a California winter.

Planting

Roses of all garden flowers are the most popular so that everyone will doubtless plant some new ones this season, for new sorts of great merit originate each year. Now is the time to plant them, and get bare rooted plants, for these are better than those in pots, cans, boxes, or sacks. Planted now they will fairly jump into life if the grower had properly dried them off before digging.

Pansies are lots of trouble but then they are such dear little things. Like babies, they repay one for all the care lavished upon them. Pansies need a rich, free soil that is as well mixed and as well pulverized as it can be made. The roots are fine as silk floss and must be kept cool and moist. Therefore a carefully placed fine mulch after planting is the proper soil finish. All hardy plants of whatsoever sorts may be put out in December, and especially is this true of all plants deciduous. If you are short of garden space, take up and store clumps of caladiums, cannas, cyperus, papyrus, chrysanthemums, etc. You will not need the 'mums for some time but do not allow them to get dry.

Northern California

By Albert R. Gould

THIS is the month when all bulbs should be in the ground as the best results are only obtained by allowing them to become well established, and after December it will really be too late. Bulbs like the freesias and narcissus planted much earlier or which have perhaps been left in the ground from previous seasons undisturbed will be showing well above the ground now and the application of a little dried blood or some such fertilizer lightly worked in will not only increase the growth considerably but insure finer flowers, and now is the time to do this; if you put it off longer you are liable to forget, furthermore it will be much more helpful at this stage.

There will be some cleaning up to do among the roses this month. All dead wood must be cut out and weak growths removed, and pruning may also be undertaken. Climbing roses should be tied in to the trellis or arch as the rough winds are very liable to damage the season's growth and this will apply generally to any climbing plant which does not entwine itself or cling. And here we might mention that the best subjects for clinging are English Ivy, Ficus repens and Ampelopsis Veitchii, or Virginia Creeper, and other species of this genera. These last named need little care and are good subjects to plant on that account, but such others as wistarias, jasminum, clematis, solanums, honeysuckle and bignonias need wire or wood trellis to assist in their support. It will be a good plan to heavily mulch the rose trees with decayed leaves or manure. Other choice shrubs may also be so treated, and it will also be advisable to spray roses subject to mildew and rust with sulphur solution.

Some Desirable Trees and Shrubs

Now that the season has arrived for active planning and planting we turn to lists of trees and shrubs offered by our nurserymen, and although these seem endless and the names oftimes beyond our reach, many should be in our gardens, when they would then cease to be strangers. Among the most beautiful of the flowering group we must give first place to the pyrus or crab apples. In early spring these are a picture in full flower and in the fall. There are a number of these, the best being P. baccata, P. coronaria, semi-double, P. floribunda, P. sikkimensis and P. spectabilis, all of tree form and of value planted as avenue trees or single specimens. In this group is the American mountain ash, P. americana, which has beautiful red berries in the fall. Next in consideration comes the prunus family, which

of course includes almonds, peaches, plums and cherries and even the evergreen laurel, but the flowering or ornamental types of the prunus family are valuable indeed and effective if used as avenue trees, as specimens or grouped. The following are all worthy of a place: Prunus cerasifera, the famous Myrobalan plum P. C. pessardei, purple leaved used largely in landscape work; P. Mahaleb, the St. Lucie cherry, and P. M. pendula, its weeping form; P. persica, the peach, of which there are several double and semi-double varieties in rose, white and red. Among the Japanese cherries P. J. H. Veitch and P. Watereri are the best.

Among the most fragrant of our shrubs of the flowering types are the mock oranges, or Philadelphus, and these should be planted in well manured soil. The best varieties are P. coronarius, P. microphyllus, dwarf variety; P. Lemoinei erectus, P. maculatus and P. Virginal. The spiraeas are very popular as flowering shrubs, and there are numerous varieties in cultivation. The best are S. arguta, growing five feet high; S. prunifolia, S. Veitchii, S. Wilsoni, S. Van Houttei, S. japonica and S. Menziesii. Among other useful flowering plants or shrubs are the brooms, ericas, crataegus, tamarix, buddleias, ceanothus, abelia and escallonias, all these are useful and provide a long season of flowers. They may be grouped for effect. Next month we hope to deal with conifers and other useful subjects.

A Climbing Hydrangea

This type of hydrangea, known as H. petiolaris, grows to a height of 20 feet or more and clings like the ivy. It may be used for covering tree stumps. It has white flowers.

Subjects for Spring Flowering

Plant out as soon as possible in well prepared soil the following: pansies, violas, dianthus, forget-me-nots, primroses, double daisy, aubretia, alyssum saxatile, wallflower and violet. All these will provide a wealth of bloom and with the bulbs will make an effective display. For best results use care in preparation of the beds and borders and dig the manure well in before planting. Keep the soil moist and cultivate as often as possible between the plants.

Sweet Peas

Those who were wise and prepared some few months ago by sowing the now popular winter or Christmas flowering sweet peas will have some to cut this month and next. It is now also time to prepare the ground by deep trenching and manuring for the summer flowering types, a selection of which we will make next month.

This Month in the Vegetable Garden

Southern California

By D. F. Reichard

UPON the rains this month depends the amount of irrigating necessary to get our ground in shape for early plantings. All land that is not to be immediately planted should be covered with a generous dressing of barnyard manure. If the soil is of a clay nature the addition of lime, sand, ashes or gypsum will be of great advantage, in fact, necessary for good results. After the fertilizers are applied a good soaking is required and the ground should be turned over to let the manure and roughage decay by allowing it to be covered for a month or so. A week or so before the ground is to be planted wet it and thoroughly work and pulverize it in preparation for receiving the seeds or plants. If the land is not to be planted cultivate or harrow it every few weeks to keep a good mulch at the surface and to kill any weeds that may start.

Plantings of the hardier vegetables may be made during December. Although they will grow rather slowly at first they will be established so that with the first warm days of late January and February they will make quick growth and mature quite a little ahead of stuff planted in early spring. The varieties recommended for this time are Egyptian beets, Oxheart carrots, Winningstadt cabbage, cauliflower, Swiss chard, kale, endive, heading lettuce, radishes, winter spinach, collards, mustard and turnips. The plants of cabbage and cauliflower, roots of asparagus, horseradish and rhubarb do well set out now.

In warm protected locations peas and potatoes should be planted, using early maturing varieties.

Start in hot beds or cold frames early tomatoes, peppers and egg plants.

Prune all deciduous trees, shrubs, berry bushes and vines and spray with Bordeaux mixture or lime-sulphur solution all plants that show any tendency to fungous diseases such as curly leaf or mildew. Burn all trimmings from plants that have been affected with fungi or insects.

A little commercial fertilizer applied to growing crops helps during these cool days. Rapid growth makes for succulent products.

Northern California

By Albert R. Gould

INCREASED production is just as important now as it was some time ago, and while we are unable to crop so extensively during the winter as in the seasons following, yet there is little chance to be idle and we have to plan ahead as well as look back on any mistakes we may have made as by these we may learn something and profit accordingly. The long winter evenings enable us to check up our crop records, our expenditures and study results, and with the aid of the Cultivator and seed catalogs we can get ready for another season. Soil preparation will still be the principal feature.

Onions

If the ground has been well prepared as we advised last month by deep trenching and liberal manuring the main crop of onions may be sown. The following are generally well known and are good keepers: Australian Brown, Ailsa Craig, Prizetaker and Yellow Flat Danvers. Sow the seed in rows 12 to 18 inches apart

This Holstein holds the WORLD'S BUTTER RECORD, 1504 lbs. butter in a year. Perfect health made her record possible.

Would a Bigger Milk Check Be Acceptable?

All you need do is to pay closer attention to cow health. A big milk yield is a genuine health certificate; if the quantity falls off the chances are the cow is suffering from some impairment of her digestive or genital organs—the starting point of nearly all cow ailments.

KOW-KURE is a cow medicine designed to act directly on these vital organs. There is nothing "just as good" for the treatment or prevention of Abortion, Barrenness, Retained Afterbirth, Scouring, Bunches and Milk Fever. For more than a quarter-century it has been used in the most successful dairies. Feed dealers and druggists sell KOW-KURE—in 60c and $1.20 packages. Send for free treatise,

"THE HOME COW DOCTOR."

It gives full instructions on treating cow diseases—should be in every farm library.

The Search for Sires

REALLY the greatest problem that the breeder has to solve is the selection of a herd sire for upon the successful solution of this problem depends to a large degree the success or failure of one's breeding operations. A study of the methods of the most successful breeders convinces that their success is closely related to the use of one or more outstanding sires.

Great sires are rather few and because of that fact any breeder, young or old, is justified in giving the matter the closest attention. Few men have the ability to select, when young, a sire that will justify their judgment. Many of the best individuals and many with pedigrees, that on paper seem to be certainties, fail to make good as sires.

Remembering that the test of a sire lies in his ability to work improvement in the herd by raising the standard of the young things from year to year, many men engaged in the business of producing pure bred livestock will do well to discard the idea that a male animal is a sire. True, he has the ability to reproduce, but a real sire must do more.

The beginner or established breeder should be constantly on the lookout for an opportunity to secure a proven sire. Such opportunities do not come often, but occasionally the owner of a successful sire is compelled to dispose of him for the reason that he intends to keep a large number of his daughters in the herd, then if investigation discloses the fact that the sire in question has been producing a quality of stuff superior to what is being produced in the herd of the one needing a sire, the opportunity should be taken advantage of.

But unfortunately there seems to be a marked discrimination against purchasing an animal with a bit of age, regardless of his demonstrated ability. Many times the writer has attended sales where a tried sire was listed and where there were breeders who knew that the kind of stuff he sired was superior to their own productions, yet they would stand by and see such a sire sell for a song. The common excuse offered is that they do not care to take the risk of investing in an animal that is along in years. As a matter of fact one crop of calves or pigs by such a sire would be worth more than several crops by an average sire.

There is another common fallacy followed by many men when in search of a herd sire, and that is the assumption that because an animal happens to be sired by a popular bull or boar and the price quoted is high that he must be good. Some men once having selected the head of their herd on the above basis become blind to his faults and either through ignorance or prejudice refuse to admit that they have made a mistake and they keep on using their "pet" year after year, wondering all the while why they do not attract greater patronage.

Another class of breeders (?) are the men who do not give their sires time to prove their ability. Some of the greatest sires of all breeds have been lost because their owner disposed of them before their merit became known.

Many other herds have suffered because the breeder who happened to be fortunate in owning a sire of merit assumed that as long as he had picked one or two successful sires he could turn the trick any time and because of such confidence sold his known sire before he had located another of equal or superior merit, only to find that the problem was not so easy.

This business of livestock improvement is not an open book, and because of the importance attached to a sire, a sound policy to follow is to maintain a constant search for a sire that will work improvement and, once having succeeded, retain his services until his merit is established and a suitable successor located.

Certainly do not reckon merit on a basis of cost of pedigree, but keep an open mind at all times and judge your own productions by the same standard used to measure the herds and flocks of fellow breeders.—R. P. R.

SOUTHERN CALIFORNIA HOLSTEIN FRIESIAN BREEDERS ASSOCIATION

A meeting of the Holstein breeders of Southern California was held in Los Angeles, November 22, 1919, at which time a permanent organization was established with the following officers: President, George M. Brown, Burr Farms, Los Angeles; vice-president, A. J. Stalder, Rosamaines Ranch, Riverside; treasurer, P. H. Krick, Anaheim; secretary, R. A. Condee, George Junior Republic, Chino. The board of directors consists of the above mentioned officers, and the following: James J. Jeffries, Burbank; W. H. Taylor, Santa Anita Rancho, Santa Anita; C. H. Harriman, Los Angeles County Farm, Hondo.

It was planned to hold a number of all day meetings at the prominent Holstein farms throughout the southern part of the state. The first of these is to be held on December 11, 1919, from 9 a. m. until 5 p. m., at Stalder Bros. Rosamaines Ranch, Riverside. All interested in pure bred Holsteins, and all dairymen interested in increased production for their herds, and their families, are cordially invited to attend this meeting. All attending should bring lunch. The association will have a number of experts to discuss the many important features of modern dairying.

This association is formed purely as an educational feature for Southern California Holstein activities. The board of directors is anxious to see a large number of both Holstein breeders and dairymen throughout Southern California attend these mectings.

Ship your furs to the nearest market -and get your money quick!

You don't have to send your furs a long way from home—you can get the highest market prices right here at your nearest market. And the very day we receive your furs, our check is mailed to you!

Future meetings are to be held at the James J. Jeffries Farm, Burbank; Santa Anita Rancho, Santa Anita; Burr Farms, Los Angeles, and the Los Angeles County Farm, Hondo.

THE WM. BERNSTEIN SALE OF POLAND CHINAS

Wm. Bernstein held his dispersion sale of Poland China swine in Hanford, Saturday, November 29. For some time Wm. Bernstein had been gathering together a great band of brood sows and gilts with the view of holding in the spring what he believed would be one of the greatest offerings ever made in the state. Circumstances over which he had no control forced him to make his sale at this time, consequently practically everything was sold open.

He has every reason to feel proud of his offering and the liberal support it received.

Thirty-two sows and gilts sold for the high average of $180.30, while the young pigs and gilts sold trom $30 to $90. Eight boars from five to 12 months of age sold for an average of nearly $80. The top of the sale was the March gilt Defender's Maid by Buster Defender, going to W. L. Haag & Son for $345, while two of her litter mates brought $335 and $280, going to M. Bassett and H. D. McCune. W. E. Martin, Visalia, paid $325 for Lady Orphan and A. Buckland and Son, Fresno, paid the same for Sunny Lass.

Poland China breeders from various parts of the state were present and gave the sale liberal support. Among these were R. F. Guerin, Visalia; R. E. Stanton, Reedley; W. C. Bryson, Lemoore; C. W. Gates, Corcoran; E. Y. Foley, Fresno; Z. M. Dickey, Dinuba; Les McCracken, Ripon, and M. Lovelace, Lemoore. Following is detailed report of the sale for animals selling for $100 or more:

1. R. E. Stanton, Reedley, $255.
2. W. C. Bryson, Lemoore, $200.
3. R. F. Guerin, Visalia, $225.
4. W. E. Martin, Visalia. $325.
5. R. G. Hamblin, Kingsburg, $165.
6. C. W. Gates, Corcoran, $285.
7. (Boar) J. L. Lane, Lemoore, $175.
10. E. Y. Foley, Fresno, $145.
11. H. D. McCune, Lemoore, $140.
12. Z. M. Dickey, Dinuba, $115.
13. E. Y. Foley, $100.
14. M. Lovelace, Lemoore, $115.
15. M. Lovelace, $275.
16. E. Y. Foley, $135.
17. C. W. Gates, $170.
18. R. L. Waltz, Hanford, $100.
21. Z. M. Dickey, $225.
22. J. F. Van Cleef, Riverdale, $105.
23. A. Milnes, Riverside, $105.
27. A. Buckland & Son, Fresno, $325.
28. Les McCracken, Ripon, $150.
31. M. Bassett, Hanford, $335.
32. H. D. McCune. $280.
33. W. L. Haag & Son, Hanford, $345.
34. W. C. Bryson, $150.
36. (Boar pig) Haag & Son, $130.
36. W. D. Trewhitt, Hanford, $170.
37. M. Lovelace, $135.
38. F. Johnson, Hardwick, $100.
39. C. W. Gates, $130.
40. W. C. Bryson, $150.
43. J. A. Crawshaw, Hanford, $105.
44. J. H. Vernon, Lemoore, $120.
51. E. Y. Foley, $120.

FOOD VALUE OF MILK

Some years ago Hoards Dairyman computed comparative food values of milk on a basis of 11 cents per quart. There has been little delivered in any of the large cities for some little time at 11 cents, but for comparative purposes that price will answer. Figuring on that basis it is found that from its actual food value veal should be purchased at eight or nine cents per pound, mutton at 20, pork tenderloin 14, fresh ham 24, bologna sausage 18, chicken broilers 5, old fowl 12, salt codfish 5, mackerel 6, clams 5 and oysters 4. Truly milk has some sustaining value as well as a high food value, according to the discoveries of Dr. McCullum.

Peppermint for oil is produced in Michigan and Indiana. The crop of 1919 has the estimate of 300,000 pounds of oil from 10,000 acres and marks another step in the continuous decline from 600,000 pounds from 18,000 acres in 1914. The average yield is about 30 pounds of oil per acre.

McCUNE'S BIG TYPE POLANDS

have stood the rigid test of time and well deserve the commendation they have received from some of the leading breeders of Poland China swine

SIZE with QUALITY is found in this herd

King's Massive Orange—McCune's Buster, by Giant Buster and a son of Surprise Prospect are herd boars that will leave a lasting impression on the breed in this state.

H. D. McCUNE LEMOORE, CAL.

Just remember I will sell in Hanford, January 24th, 1920, Poland Chinas bred right, grown out right and the right type.

TAKE NOTICE! THE HIGHEST PRICE paid for a car load of fat hogs at the California International Livestock Show came from the

BASSETT

Herd of Advance Type Poland Chinas

Many firsts, seconds, senior champion sow and GRAND CHAMPION SOW were won in the open classes, proving without a single doubt we are breeding the kind the packer wants and the farmer should raise. Animals of all ages, high class young boars, bred sows and gilts for sale at reasonable prices.

M. Bassett & Son Hanford, Cal.

Lendorris Ranch

Good boars will not make a good herd without good sows. A visit to our ranch will prove to you that the matrons mantained have no superiors on the coast. Young, big type, Poland Chinas from good mothers by such boars as Lendorris Liberty Bond, Young Jumbo and Liberator. For sale at reasonable prices.

W. L. Haag & Son Hanford, Cal.

Come and See Them

Our Big Type Poland-Chinas are the real kind of hogs. If you can't come write for what you want. We have them if you want the prolific, quick growing, big type kind.

Poland China Ranch H. B. Peake Mgr. **San Bernardino, Calif.**

Blood Will Tell

in the show ring, in the feed lot or on the butcher's block. The Poland Chinas bred by me fulfill all these requirements. They make money for me and they will for you. My prices for good breeding animals are always reasonable.

Eugene Miner Lodi, Cal.

Come to Paradise

and see my big type Poland Chinas; grandsons and daughters of Caldwell's Big Bob. One of his best sons heads my herd. Also the home of Whiz-Bang. Get my prices and breeding and satisfy yourself that I offer the kind you want.

J. H. Cook Paradise, Cal.

Golden West King

was such a superior type of a big Poland China boar that as a junior boar pig he was made GRAND CHAMPION BOAR at the California International Livestock Show. His litter mate, second to him in class was regarded by the judge as practically his equal. My winnings at the State Fair, Stockton, and at San Francisco, prove my claims for superior Poland Chinas. Eastern judges and breeders pronounce them the equal of any seen at the big eastern shows. I have these kind for sale at reasonable prices.

J. F. LEHMAN LODI, CAL.

SMOKE YOUR MEAT THE "WRIGHT" WAY

Hickory Cured Hams are Best

THAT'S why we use **Seasoned Hickory Wood** in making **WRIGHT'S CONDENSED SMOKE.** If you want some good old fashioned **Hickory Flavored Hams and Bacon** use **WRIGHT'S HAM PICKLE and WRIGHT'S CONDENSED SMOKE.** The Ham Pickle is a scientifically prepared sugar cure. A dollar jar and 27 pounds of salt prepares a barrel of meat for smoking. A Dollar bottle of **WRIGHT'S SMOKE,** thirty minutes and a small brush will thoroughly smoke your meat and give it a **Delicious Flavor.** The "WRIGHT" Way of curing meat is easier, quicker, cheaper and gives better results. No fooling with fires. No danger of meat spoiling. No drying out or shrinkage.

WRIGHT'S FARM BUTCHERING SET (Nine regular butchers' tools, including saw and cleaver) should be on every farm. We buy in carload lots and resell at cost—**$3.95.**

Send for instructive booklet: *"The New Way of Smoking Meat."*

Feed Prices and the Dairyman

By F. W. Woll

THE question has been raised how much a dairyman can afford to pay for alfalfa hay and continue in the dairy business. There are many factors that have a bearing on this question, and a full discussion of them would take up considerable space; in fact, it involves the entire subject of dairy economics. A brief mention of the main factors may, however, suffice and will be of interest to many subscribers.

The returns that a dairyman secures from his herd depend more on the kind of cows he has than on any other single factor. He may have cows that will average less than half a pound of butterfat a day or such as produce one or one and one-half pounds, or more, per day for the entire lactation period. Cows do not begin to differ as much in the amount of feed they eat as in their production, since the latter is determined

Lily of Willowmoor

Ayrshire cow hred by J. W. Clise, Redmond, Washington, which produced in 1917 22,596 pounds milk and 955.56 pounds butter fat. Winner at Chicago International.

by the feed eaten over and above maintenance requirements for repair of body tissues and the continued exercise of vital functions. About one-half of the feed eaten by dairy cows goes to provide energy for body maintenance; the other half is used for the elaboration of milk and stands in direct proportion to the amount of the milk secretion. An average dairy cow will eat about 25 to 30 pounds of alfalfa hay per day, depending on the quality of the hay and its water content; 25 pounds is a good average figure, and she will produce on this feed about three-fourths of a pound of butterfat. In other words, it takes approximately 33 pounds of alfalfa hay of average quality to make a pound of butterfat in the case of such cows, and a ton of alfalfa will therefore produce somewhere around 60 pounds of butterfat. Hence, if this is worth 75 cents a pound, a ton of hay will bring an income of $45 as marketed through the cow. Under ordinary California conditions the feed is the largest item in the cost of milk production, amounting to at least 50 per cent on the average. Other items, in the order of their importance, are: labor; depreciation of cows, bulls and equipment; taxes, insurance and interest on investment; veterinary services and medicines, etc. Fifty per cent of $45 is $22.50, so that the contention of some dairymen that they cannot make money on their cows by feeding alfalfa hay worth $20 a ton is not correct even if they keep only cows of a medium production, which no man has any business to do if he can help it, least of all when he has to buy his hay. If he raises his own alfalfa, he receives the difference between the cost of production and the market price on the hay by feeding it on the ranch so that even if he is not making much money on his cows he is ahead the profit made on growing the hay.

But an average production of three-fourths of a pound of butter fat per day per cow, or say 200 pounds for the year, is unsatisfactory under modern conditions of dairying; it can be raised by gradually eliminating the low producing cows in the herd that do not yield any net profit for the feed and care bestowed on them, and by feeding the good cows according to their production, giving each about a pound of grain feed for every five pounds of milk produced, in addition to the hay. Additional grain feeding will cause a direct increase in production of from 12 to 20 per cent in case of good dairy cows fed alfalfa only. It will also cause an increased milk flow during the balance of the lactation period after grain is no longer fed and will put the cows in a good body condition, which is of advantage both as regards the milk production during the following lactation period and the size and thriftiness of the calves dropped.

By eliminating unprofitable cows, by feeding those retained in the herd some grain, and by grading up the herd through the use of a pure bred bull of a family of good producers, the dairy farmer will be able to gradually increase the returns from his herd. If this has been improved so that the cows average a pound of butter fat for each day in the year, they will bring in 75 cents for the amount of hay eaten daily, which will not be far from 30 pounds. With such cows a ton of hay will produce about 67 pounds of butter fat, worth at present prices $50.25; one-half of this, or $25.13, is to be charged to the feed, thus yielding a profit of $5.13 per ton of hay eaten, if this is worth $20 a ton. A dairyman keeping good cows will therefore have no occasion to worry about high feed prices. The latter are accompanied by high prices for milk and butter fat, and if he fails to make money on his cows it is because he has not done all he can to improve the herd. With cow testing associations in operation or being organized in most important dairy sections in the state, it will be an easy matter in the future to find out what the cows actually produce from month to month, and it is the duty of the dairyman, both to himself, his family and his country, to take advantage of the information thus furnished and go on improving the herd, as suggested, thus incidentally reducing the cost of producing the milk.

Along the feeding line, a brief circular recently issued by the college of agriculture on "Feeding Dairy Cows in California" should prove helpful. Copies of this circular will be sent free of charge upon request to Director of Experiment Station, Berkeley, California. As a large edition has been published there are plenty of copies to supply all who write for it.

KINGS COUNTY DAIRY EXCURSION

County Agent Wallace Sullivan of Kings writes regarding the recent farm bureau dairy auto excursion. It covered nearly one day and was attended by 125 dairymen. Thirty-four automobiles were in line. Large posters were fastened to the autos showing facts and figures regarding the dairy industry in Kings County. A feature of this trip was a cow judging contest at the Post-Card Ranch, in which 20 dairymen were engaged. Only three succeeded in placing the first cow. Mr. Filcher, manager of the ranch, then announced their records of production. This brought out very vividly the necessity of cow testing in order to determine the best cow.

Dairies visited included those of A. B. Comfort, Geo. A. Smith and Post-Card Ranch. There was luncheon at the Corcoran High School with addresses made by practical dairymen. There were judging contests, all present being urged to take part in this feature of the program.

BUTTER, CHEESE AND ICE CREAM MAKERS MEET

The California Butter, Cheese and Ice Cream Makers Association held its 1919 convention at the university farm, Davis, on November 20.

The butter makers' competitive judging contest was won by A. R. Wickham of the university farm. Mr. George Dondero of the Petaluma Co-operative Creamery won second honors in this contest.

After the judging contest, T. J. Harris of the San Francisco Dairy Produce Exchange called the butter

makers' attention to certain common defects in butter, his contention being that a large amount of butter lacking in color is received on the market at this time of the year. G. E. Frevert of the United States dairy division also addressed the meeting, calling special atention to the value which can be obtained from educational butter judging contests.

At the business session it was agreed to establish a requirement for membership which would eventually result in developing a better spirit among the men in the plant and their managers.

The following officers were elected: President, Thomas C. Moran, Oakdale; vice-president, J. M. Jensen, Hanford; second vice-president, Wm. Dreyer, Sacramento; secretary-treasurer, J. C. Marquardt, Davis.

March 13. Haag & Bernstein, Hanford.

J. Francis O'Connor, owner of Castleview Ranch, Santa Rosa, has recently purchased from B. M. Nixon, Yountsville, two Guernsey heifers and a young bull. It will be remembered that at the meeting and show of the Western Berkshire Congress held in Davis last February Mr. O'Connor won the Guernsey heifer offered by Mr. Nixon as a prize for the best fat barrow. This heifer has recently dropped a fine heifer calf which will be retained in the herd of Guernseys Mr. O'Connor is gradually building. Just at present Castleview Ranch is busy preparing for its forthcoming Berkshire sale, which will be held in Santa Rosa February 14. The sale will comprise some 25 or 30 bred sows and gilts which are now being bred to the herd boars, Mayfield Rookwood, Castleview Champion, a son of that renowned sire, Lustre's Dominator, and the new boar Achiever. Mr. O'Connor is reserving two fall litters by this boar which will be grown out for the shows next year. He states that he has never had such size for age as in the pigs by Achiever.

F. M. Johnson, Napa, has gathered together what he believes is a herd of Duroc-Jerseys that will rank with any to be found in the West. He personally selected from some of the leading herds of the Central West 20 sows and 25 gilts representing the blood of such noted sires as Pathfinder, Sensation and Great Wonder. At the same time he secured as herd boars a son of Great Sensation, Pathfinder and the boar King Orion Jr. that was made grand champion at the late California International Livestock Show. These sows and most of the gilts will be mated with these boars for spring litters. It is Mr. Johnson's intention to devote the greater part of his time in the future to breeding Duroc-Jersey swine.

In the forthcoming sale of Harvey M. Berglund that will be held in Dixon on January 15 he will offer 35 bred sows and gilts that will represent some of the best blood lines to be found in the breed. These will be bred to his two herd sires, California Orion King and Chief Defender. This will he Mr. Berglund's first offering at public sale, and he has devoted considerable of his time to selecting and developing the animals he will offer.

Les McCracken, Ripon, has recently purchased from J. H. Cook, Paradise, a number of junior yearling Poland China sows and spring gilts. Mr. McCracken has announced a sale at his farm for Fehruary 3, at which time he will offer 50 to 60 bred sows and gilts, most of which will be bred to his great boar Kings Big Bone Leader. Mr. McCracken has been a buyer at most of the recent sales, at which time he selected only such animals as he deemed worthy to represent his herd. He states that only the very tops of his entire herd will go into this sale.

Geo. V. Beckman and sons announce that on January 27 they will hold in Lodi a public sale of bred Poland China sows and gilts. These will be bred to their two boars, Matchless Big Bob and Lakeside Defender. Mr. Beckman states that every an-

The California Cultivator Costs Only $1 Yearly

Will the livestock producer benefit by the proposed Kenyon and Kendrick bills?

Practical men in the industry at a hearing in Washington, say NO

Down in Washington, as you know, they are considering a plan of licensing the packing industry and putting it under the direction of a government official—

A political appointee with the power to experiment as he chooses with this vital business.

* * *

How will your brother stockmen and feeders like that?

Recently a number of them went to Washington to give their opinions. What follows is a fair sample of their testimony:

Robert J. Kleberg, Livestock Producer, Kingsville, Texas, testified that—

"I contend and believe that the producer of livestock who conducts his business properly has nothing whatever to fear from the packers. He needs the packers to prepare his product for the market and to distribute it. Without the aid of the packers, the production of livestock could not exist as an industry. . . . I do not believe that this licensing system and the taking of the stock yards away from the packers and the taking of the refrigerator cars away from them, the ownership away from these men and the management away from them is going to help."

E. M. Ammons, Cattle Grower, Parshall, Colorado, said that—

"I am opposed to these bills. . . The Western Stock Show Association, including all lines of industry there, went on record unanimously and passed a resolution prepared by two producers and one banker not connected with the yards, *against* the principle of licensing this business or establishing or permitting the business to be controlled by these bureaus, giving the power to make rules and regulations having the effect of law."

Dr. J. M. Wilson, General Manager Platte Valley Sheep Co., McKinley, Wyoming, stated that—

"The livestock business and its allied interests are so complicated that unless you get a man who is well informed in business it is very liable to do more damage than good. . . . I see nothing but confusion and uncertainty ahead if the present methods are disrupted and the stock yards put under Federal Control and into the hands of an inexperienced manager."

I. C. Thurmond, Cattleman and Banker, of Oklahoma City, Oklahoma, testified that—

"The people of our state are absolutely—after the experience that we have had with Mr. Burleson and the wires and the railroad control—they are absolutely against it (Federal control of the packing industry). While there might be a few socialists in favor of it, I believe that most of the socialists have gone back on it. All of the people in the state are against governmental control of the railroads or legislation in any way."

Scores of similar statements from the testimony of producers, farmers and feeders all over the country could be quoted if space would permit.

* * *

Do you want the packing industry under an inexperienced political appointee? The interests of the producer and the packer are mutual. If radical legislation should upset and disorganize this high efficiency of the packing industry, the producer would be hit as hard as the packer.

There is no question but that the cost of conducting the packing business will be materially increased by such legislation. The packer's profit—a fraction of a cent a pound from all sources—could not take care of such increases, which would necessarily be reflected in lower prices to producers or higher prices to retailers.

Swift & Company will be glad to mail a summary of the testimony of the livestock producers at the hearing in Washington. Write for a copy. Address Swift & Company, Union Stock Yards, Chicago

It Excels in Orchard Work

ORCHARD work demonstrates the unusual adaptability of the Bates Steel Mule.

Fact is, that California fruit growers pronounce it the ideal tractor for orchard cultivation.

Its design is low and narrow, allowing the tillage of the soil close up to the trees without a chance of injury to the low hung branches, and the short turning radius of only 16 feet enables a thorough cultivation of the ground.

The Bates Steel Mule with its Crawler type of traction will not pack the ground as its ground pressure is but 3½ pounds to the square inch.

Think what this advantage means in your orchard.

We have an interesting and instructive catalog which will be mailed you for the asking. Write for it today.

Big New Stump Puller Book FREE

Tells the Cheapest and Easiest Way to Clear Your Land!

Write for the book today. Read how Kirstin scientific leverage enables ONE MAN ALONE to pull big, little, green, rotten, low cut, tap rooted stumps—also trees, hedges or brush. No horses or extra help needed. No digging, chopping or other expense. The Kirstin is lowest in first cost—lowest in operating cost. Soon pays its cost in Bigger Crops, and Increased Land Value. It adds thousands of dollars to profits each year. Write for the New FREE Book Now!

Six Months to Pay! Thousands of farmers now buy on Easy Payments. In that way the KIRSTIN usually pays for itself before you pay for it. You don't feel the cost at all.

The famous Kirstin is made of finest steel. Guaranteed 3 years against breakage—flaw-or-no-flaw. It weighs less—Cost less. Yet has greater speed, power, strength, and lasts longer. A few pounds on handle exerts tons on stump. Single, double, triple power. Several speeds. Low speed loosens stump. High yanks it out quick. Patented quick take-up for slack cable. Easily moved around field. A WONDERFUL SUCCESS.

SHIPPED from Escanaba, Mich. Portland, Oregon Atlanta, Ga. Soo, Canada

imal in the sale will be worthy to represent the breed.

Eldorado Winifred, a registered Holstein heifer owned by Alex Whaley, Tulare, recently completed official records of 30.21 pounds butter from 637.6 pounds milk in seven days, 119.40 pounds butter from 2,645.7 pounds milk in 30 days, as a junior four year old. She made over 25 pounds butter in seven days as a senior two year old and is out of the 32 pound cow Winifred Hotaling 3d and sired by Sir Holland Gamp. She is one of the great individuals of the breed in California. Another good record was lately made in Mr. Whaley's herd by Yama Princess Alcartra Lass, that made 27.01 pounds butter from 601.3 pounds milk in seven days.

F. E. Crowell of Alpaugh will add another pedigreed hog herd to the growing number in Tulare County and will introduce the Berkshire breed in that section. At the California International he bought a 21 months old boar of the famous Epochal strain for a herd leader from Dr. O'Connor of the Castleview ranch of Santa Rosa.

A consignment sale of 60 head of bred gilts will be held at the sales pavilion in Tulare, February 18, by the Tulare County Duroc-Jersey Breeders Association, at which 60 head of bred and open gilts will be offered at auction. All of the bred gilts to be entered will have been bred to prize winning boars in the state.

C. T. Thompson, breeder of high class Durocs at Bishop, is concluding purchases of four crack brood sows from Eastern herds. Two of these are from the noted McKee Bros. herd at Versailles, Kentucky. A third is a daughter of Jackson's Orion King, while the fourth is by Mammoth Sensation. The home herd of brood sows at Bishop consists largely of a select string of Defender sows, the get of the big grand champion boar Thompson's Pilot Defender. Mr. Thompson reports a number of good sales since his return from the Los Angeles Livestock Show.

Ralph W. Mitchell, junior member of the firm of C. K. Mitchell & Son, breeders of Durocs at San Diego, has accepted the management of the W. Moore Green Canyon Ranch herd of Durocs at Fallbrook.

Hugh C. Shinn of Tulare writes: "I recently sold a fine boar pig Fortuna Bob by Bridges Bob Wonder to W. H. Rough. Breeders who have seen this pig have pronounced him a great prospect and I think more will be heard of him later. Also sold a couple of bred gilts to the Boys Pig Club at Bakersfield and a boar pig out of my grand champion sow Bob's Giantess to James Herod at Bakersfield and a boar pig by The Californian to F. E. Fay of Tipton."

THURSDAY, DECEMBER 11

Owing to error in copy the first advertisement of Ord L. Leachman for the great Shorthorn sale at Sacramento for Thursday, December 11, was printed Tuesday, December 11. Remember, the day of the week for the sale is Thursday, while the date December 11 is correct. The sale is on state fair grounds at Sacramento and 50 utility Shorthorns from the W. C. Short herd of Reno, Nevada, will be offered. This is the first sale in this state from this herd, one of the oldest in the West.

INTERESTING APPROPRIATIONS

Provisions of the last federal agricultural appropriation bill that are of interest to Californians are: One of $20,000 for investigating new grape industries and methods of utilizing grapes heretofore used for making wine; one of $15,000 for stimulating the improvement of potato seed stocks; and one of $20,000 for nut improvement work, especially upon pecans, almonds, Persian walnuts, black walnuts, hickory nuts, etc. A general appropriation of $50,000 was made for stimulating seed production, and part of it will be spent in a survey of California vegetable and flower seeds.

The Famous **TAGUS RANCH** Tulare Cal.

MERRITT-BOWERS COMPANY

2-DAY SALE Tuesday Wednesday DECEMBER 16th 17th

Offers an Opportunity No Stockman or Farmer Can Afford to Miss

The Shorthorns

101 in number, are the largest lot of animals of superior breeding ever offered in a single Shorthorn sale in California. The 58 beef cows and heifers, most of them bred and many selling with calf at side, are a fine lot of matrons by Scotch and Scotch topped bulls. Many are by Knight Avon 2nd, the great Curtiss bred bull by the Carpenter & Ross bull Comet by Avondale and he by Whitehall Sultan, which is quite enough to say of a Shorthorn. Some of the cows are in calf to Knight Avon 2nd, and others by some of his outstanding sons.

Knight Avon's sons of breeding age are numerous in the offering and frequently in the catalog will be found sons and daughters of Coronado, by Golden Goods, the last of the great sires combining the direct blood of the St. Louis World's Fair Champions, Young Abbotsburn and Choice Goods. A worthy son of Coronado transmitted more of this blood through the herd and is bred to daughters of Arizona Archer, by Victorious Archer by Golden Lord, a member of the strikingly handsome Golden Drops section of the Linwood herd. Knight Avon 2nd was used quite extensively on the daughters of Coronado.

The 25 bulls in the offering are good rugged sires, bred and raised in the open and ready for the range or breeder's lot.

The 13 MILKING SHORTHORNS are a shapely lot of well developed dual purpose cows, and for the most part are bred along lines that will give the greatest production of valuable products for which the Shorthorn is noted—meat and milk. Glensides Sequel of the famous Glensides breeding has seen service in the herd and is the sire of the half dozen fine vigorous young bulls that should prove an attraction where milk-strain Shorthorns are in demand.

The Shorthorn offering, presented in good rugged range condition, without the usual sale ring preparation, will give the buyer more for his dollar than had the herd been pampered and fitted for the auction.

The good regular breeders of such excellent blood lines and tuberculin tested should make the most inviting Shorthorn offering of the year and the large number selling is bound to have the bargain spots.

The Shorthorns will go through the ring commencing 9:30 o'clock Wednesday, December 17th.

The Herefords

The 30 two-year-old Hereford bulls are as nice a lot as was ever offered in a bull sale of either registered or unregistered purebreds. They are the tops of a large purebred herd that has been permitted to run on the range without the keeping up of individual breeding records, so they will sell unregistered, ready for the range. The ruggedness, size and vigor of the lot commends them to the buyers who want a better crop of calves by bulls that have been bred right and raised under conditions which will permit their being turned out on the range to prove their worth. They sell Wednesday, December 17th.

The Work Horses

No ranch can boast of a better lot of good work horses than this one, and the 30 head that are offered are ready to get into the collar for any kind of work. They sell Tuesday, December 16th.

The Mules

The 25 mules are fine big good pullers, heavy in demand throughout the land today, and buyers will find the kind to their liking in this bunch. They sell Tuesday, December 16th.

The Unbroken Horses

The 25 unbroken horses are for the greater part saddle stock, being a nice trim lot of young horses not to be overlooked. They also sell Tuesday, December 16th.

The Draft Horses

The horse offering has never been surpassed for a finer lot of registered and unregistered stock than has been put up to the highest bidders at this sale.

Percherons

Superior, 97190, the big steel gray 7-year-old stallion by Restaurant, an imported stud, and out of Black Bess, is the kind badly needed in many communities of the country today.

Woodland, 141084, the gray 3-year-old by Nero, 1211001, and out of Comet, 74004, is one of the promising young stallions of the Pacific Coast.

Inquiet, 69564 (79239), the big black imported stallion by Aiglon (64052) and out of Castille (61344) is one of the kind seldom, if ever, found at public sales.

Patre of Palcines, 111450, a gray 5-year-old stallion by Fernand, 72763 (65262), and out of Pink Timber, 46040, is a real horse through and through.

A gray 2-year-old stallion rounds out the Percheron offering, the likes of which has rarely ever been sent through the sale ring.

Shires

General Sherman, 18042, a black 4-year-old stallion by Rolleston Wonder, 7931 (22730), and out of March Queenie, 10517 (58913), both imported stock, could stand anywhere in the country.

March Coronation, (12959), an imported 7-year-old stallion, is a beauty, size and quality unexcelled.

Goodacre Gem, 15949, a 6-year-old bay mare by Nateby Statesman, 8510 (23539), and out of Horbling Gem, 10519 (58916), is a fine brood animal of the best of imported mating.

Wrydelanes Model, 105454 (58883), a brown mare by Warden Royal Harold (16300) by Harold (3703) and out of Norbury Sylph (48883) was imported in 1909 as a filly and comes from the best Shire blood in England.

Belgians

Dewey, a roan 2-year-old stallion by Cesar d'Olsene, 3924 (51518), and out of Diana, 1426 (67045), combines the blood of two of the greatest imported horses ever brought West and his big muscular body and heavy frame would be difficult to equal.

A nice big Belgian stallion colt also goes into the ring for what buyers consider him worth.

Margot de Waere, 66859, a black imported mare by Martin de Cappelle (41336) and out of Marie de Waere, is one of the choice mare offerings.

Mina (1370) a 2000-pound imported roan mare, is of rare quality and substance.

A roan imported mare of 2000 pounds on which the owners cannot secure papers would not be up for sale under any other circumstances.

German Coach Horse

Raven, 5945, a 7-year-old stallion by Latus, 5289, out of Dura, 312, is a horse worthy of his breed.

These sell Tuesday, December 16th.

The Wagons and Harness

The 25 big wagons are in good-as-new condition and with the 20 sets of first-class harness will make a feature of the sale well worth figuring on even if interested in nothing else. They sell Tuesday morning, December 16th, and will go fast.

The Jacks

Five of the biggest boned kind of Jacks that get those big useful mules are to be sold under the hammer on Tuesday, December 16th, making an attraction of the sale that is of unequalled offering anywhere in the country.

THE IMPLEMENTS

Tagus Ranch is noted for its modern equipment and the manner in which it maintains its farm and field machinery is an example for other ranches of the country. Much of the great 6000-acre ranch is being leased, so there is offered an assortment of implements too numerous to mention. Plows of all descriptions, subsoilers, grain and alfalfa drills, and hundreds of useful and expensive tools that have seen but slight service, will go to the highest bidder.

THE IMPLEMENTS WILL START THE GREAT 2-DAY SALE, COMMENCING 9:30 O'CLOCK, TUESDAY MORNING, DECEMBER 16, 1919.

A "365" Day Liniment

YOU ARE SAYING TO YOURSELF—"If I only knew of something to stop that Backache—help my Rheumatism—cure my Neuralgia, I would send and get it at once."

Get It. Relief. Gombault's Caustic Balsam will give you immediate A Marvelous Human Flesh Healer and a never failing remedy for every known pain that can be relieved or cured by external applications. Thousands testify to the wonderful healing and curing powers of this great French Remedy. A Liniment that will soothe, heal and cure your every day pains, wounds and bruises.

Gombault's Caustic Balsam
The Great French Remedy
Will Do It

It Helps Nature to Heal and Cure. Penetrates, acts quickly, yet is perfectly harmless. Kills all Germs and prevents Blood Poison. Nothing so good known as an application for Sores, Wounds, Felons, Exterior Cancers, Burns, Carbuncles and Swellings.

"I had a bad hand with four running sores on it. The more I doctored the worse it got. I used Caustic Balsam and never needed a doctor after that." —Ed. Rosenburg, St. Ansgat, Ia.

Mrs. James McKenzie, Edina, Mo., says: "Just ten applications of Caustic Balsam relieved me of goitre. My husband also cured eczema with it, and we use it for corns, bunions, colds, sore throat and pain in the chest."

A Safe, Reliable Remedy for Sore Throat, Chest Cold, Backache, Neuralgia, Sprains, Rheumatism and Stiff Joints. Whenever and wherever a Liniment is needed Caustic Balsam has no Equal.

Dr. Higley, Whitewater, Wis., writes: "I have been using Caustic Balsam for ten years for different ailments. It has never failed me yet."

A liniment that not only heals and cures Human Flesh, but for years the accepted Standard veterinary remedy of the world.

Price, $1.75 per bottle at all Druggists or sent by us express prepaid. Write for Free Booklet and read what others say.

THE LAWRENCE WILLIAMS CO., Cleveland, Ohio

PURE HAWAIIAN CANE
MOLASSES

By actual test it will increase pork production half a pound daily over a barley and tankage feed yet it sells for less than half the price.

By actual test it will increase milk production 15 per cent.

Seventy-five per cent of the Blue Ribbon Winners at the Livestock Show were owned by people who are feeding molasses.

If you want increased production at lower costs feed molasses.

Write us at once for prices and interesting booklet telling how to reduce feeding costs.

GEORGE W. BELL
A BUSINESS AUCTIONEER

When in need of high class auctioneering service I would be glad to have breeders and farmers correspond with me. I have had years of experience, know values and know pedigrees. I am selling for many of the leading breeders of California and am prepared to deliver the same results that have attracted this custom. Terms reasonable. Write, wire or phone.

GEORGE W. BELL **Tulare, California**

STRAY THOUGHTS OF A COWMAN

By A. L. Spellmeyer

Our bulk of killers are merely branches of those Eastern firms who pay this extra four to six cents for quality in the Middle West. Why can't they do it here and encourage home production? Home industry is essential in cattle production and feeding.

California, the state of progress, is getting to be behind the times in the cow business. It is true it now has brand inspection, which Arizona, Texas and other states have had for many years. Arizona now has a state fencing law, and with the five year forest leases, all it needs is terra money and in a very few years Arizona will run more cattle and have better cattle than California. There are almost as many registered Hereford cows in Arizona as in California, which is a little item some of our people don't know.

All the Mexican cut-backs and trash from the border have been foisted upon these California ranchers as Arizona cattle. There are good cattle in Arizona and hundreds of thousands of them, but our people don't get to see many of them as they won't pay the price. The best cattle and the best lambs go usually North and East where there are markets and where an extra price for quality is paid.

There will be no stockyards in California unless packers support them and some of them won't do it unless Uncle Sam gets into the game. A stockyards not backed by packers or Uncle Sam would merely fizzle out and be something nice for a gang of land speculators or stock promoters. A stockyards in Los Angeles and San Francisco would be a great blessing for producers and bring in much money, but it is as yet merely a hope which we cannot believe will materialize.

As meat comprises about one-third of the cost of eating and a part of living cost, we should have our school children study these primary economic questions and help decide the meat question for the future generations as it doesn't seem as if any action was being taken by our government which will bring any results during our present lifetime.

The finish market to be put to meat around these parts we hear is nine cents for grass fat steers and eight for grass fat cows. It will sure finish some of the cattle feeders who have loaded up to furnish much needed food for the people of this and other countries at the behest of the food administration and other official sources. They will be public benefactors because they are certain at present prices to drop all their profits for this year and most of some other years.

VALUE OF A PURE BRED SIRE

In reply to a query for definite figures as to the value of a pure bred sire, D. S. Bullock, Wisconsin Livestock Breeders Association, writes as follows in the Breeders Gazette:

"Through the Wisconsin cow testing associations it has been possible to collect a large amount of material showing the value of pure bred sires over grades and scrubs in dairy herds. The herds in the different associations were classified as to the kind of sire they were using. One association reports that the average production of herds using pure bred sires is 49 pounds per cow per year greater than that of herds using grades and scrubs. This is the poorest showing made by the pure bred sires in any association in Wisconsin. The Anston Cow Testing Association reports that cows in their association from herds headed by pure bred sires average 230 pounds of butter fat per cow. Herds in the same association using grade and scrub bulls average only 145 pounds butter fat per year. In another association which has been in operation for several years the milk production per cow in those herds using pure bred bulls was 6,350 pounds, while in herds using grades and scrubs 5,009 pounds was the average. The difference in butter fat per

Beef Cattle Specialist

For 30 years I have been devoting my entire time to pure bred beef cattle. I know the kind of cattle California needs and where and how to buy. I make regular trips to the great producing centers and will buy on order. Best of references. Satisfaction assured. Correspondence invited. R. M. DUNLAP, Hotel Land
Sacramento, Cal.

cow in herds using grade and scrub bulls and those using pure breds was 80 pounds. In the cow testing association work Wisconsin has what is known as a Register of Production, and any cow in the association producing 365 pounds or more of fat per year can be enrolled in this. During the first year 281 cows were entered and of these 264 were sired by pure bred bulls. The other 17 were entered as natives; the reason for their being so entered was that nothing was known of their ancestry. As far as our records go no cow sired by a grade or scrub bull has qualified for this Register of Production. Nothing could be more conclusive than these figures as to the value of pure bred sires in dairy herds."

LIVESTOCK CARRYING CAPACITY

The livestock carrying capacity of the various counties of Arizona has been worked out by Dr. R. H. Williams of the agricultural college. These figures show a variation from ranges which will require 319 acres to support a cow for a year to counties with ranges where 15 acres will support a cow for a year. The figures for all counties follow:

	Acres per Cow
Santa Cruz	15.0
Cochise	18.8
Greenlee	19.8
Graham	20.5
Gila	22.6
Yavapai	22.8
Apache	29.0
Pinal	32.3
Pima	33.5
Coconino	40.7
Maricopa	46.2
Navajo	47.2
Mohave	57.2
Yuma	319.0

Veterinary

Scabby Skin

Please give a remedy for scab on a horse's legs. Is it due to a parasite or is it in the blood?—Subscriber, Escondido.

The trouble may be all in the skin or part of it may be due to inactive kidneys. Give a tablespoon of nitrate of potash in the feed morning and evening for a week. Also get your druggist to dissolve an ounce of chloride of zinc in a gallon of water. Warm the solution and use enough to wet the scabby parts once a day.

Ulcer on Sheep

We have a sheep that was bitten on the back by a dog about a year ago. It would not heal as she kept biting it until we covered it with a cloth; then it formed a scab, but when the scab comes off it is still mattery. What can we do for it?—Subscriber, Tulare.

Get of your druggist some bichloride of mercury tablets, the kind used for dressing wounds. Put one in a pint of warm water and use that solution to wash the ulcer once a day. If it will not dry up then dust on a little powdered burnt alum.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.
Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Does Seller Pay Taxes?

I sold my ranch but reserved crops. The deed was delivered before the crop was ripe. I made the first payment of taxes. Am I legally or morally compelled to pay the second installment?—Subscriber, Indio.

As to the question of moral compulsion, it lies not within the scope of this medium unless injunction to render unto Caesar that which is Caesar's should apply. If the deed contained the word "grant," as it probably did, two covenants are thereby implied unless restrained by express terms contained in the conveyance. These two covenants are: (1) That previous to the time of the execution the grantor has not conveyed the same estate or any right, title or interest therein to any person other than the covenantee. (2) That such estate is at the time of the execution of such conveyance free from encumbrances, done, made or suffered between the grantor or any person claiming under him; such covenants may be sued upon in the same manner as if they had been expressly inserted in the conveyance. Taxes are assessed upon the first Monday in March of each year, although they are not payable until afterwards; they become a lien upon the property such that unless restrained by express terms the above covenants apply. You may therefore be legally compelled to pay the second installment. It is probably the case that the deed was drawn by some inexperienced party, but that would not help you.

$30 Holsteins $30

Five weeks old 15-16 pure bred from Waukesha County, the world's greatest cow county. $30.00 crated. Write us for anything in cattle.

The Highest Priced SIRE and SON

KING KORNDYKE PONTIAC 20th

and HIS SON

KARLRAY PONTIAC TOLA

King Korndyke Pontiac 20th, our junior herd sire, at $6500, is the highest priced Holstein bull ever sold at public sale in California.
Karlray Pontiac Tola, a three months old son of King Korndyke Pontiac 20th, and the great heifer K. P. Tola Joe, has been sold by Gotshall and Magruder, Ripon, to A. B. Spooner, San Luis Obispo, at a price never exceeded in California for a bull calf at private sale.
In these instances price is a true measure of quality.
Why not put a son of this sire at the head of your herd?

THE WORLD'S GREATEST YEARLY RECORD BREEDING

In the 1000 lb. Sale

State Fair Grounds, Sacramento, Cal.

Thursday, December 18, 1919

70 Young Registered Holstein Cows and Bulls 70

To Be Sold by A. W. Morris & Sons Corporation (Woodland, Cal.)

This great breeding firm is compelled to make an immediate and substantial reduction in the size of their herd owing to the disastrous fire which destroyed their cow barn, alfalfa hay, mill feed and four silos early in November, and buyers will have an opportunity to secure registered Holsteins that would not be offered for sale under less urgent circumstances.

IN THE SALE

A 30 lb. cow that made over 25,000 lbs. milk and 1,081 lbs. butter in one year, bred to King Morco Alcartra, son of Tilly Alcartra.

A 29 lb. daughter of Korndyke Queen De Kol's Prince, bred to King Morco Alcartra. She is the dam of Miss Gelsche Walker Korndyke, former state record two year old.

A 28 lb. 4 year old daughter of a 33 lb. cow that made over 1000 lbs. butter in one year. This cow herself recently completed a record of over 22,000 lbs. milk and 908 lbs. butter in one year.

A 27 lb. granddaughter of Colantha Johanna Lad bred to King Aaggie Mead, full brother to Aaggie Acme of Riverside 2nd, the world's yearly official record cow.

A 26 lb. daughter of a 30 lb. cow that made over 1000 lbs. butter in one year, her dam also a 1000 lb. cow. Bred to Sir Aaggie De Kol Mead, son of the world's record heifer Miss Valley Mead De Kol Walker.

A daughter of King Meade of Riverside that made over 750 lbs. butter in one year as a two year old. She is fresh.

A daughter of King of the Pontiacs that made over 700 lbs. butter in one year as a two year old. Bred to Sir Aaggie De Kol Mead.

A daughter of the great Aaggie Acme of Riverside. Bred to Sir Aaggie De Kol Mead.

A 20 lb. three year old daughter of Prince Gelsche Walker out of a 28 lb. four year old.

A 21 lb. three year old granddaughter of Aralia De Kol bred to King Aaggie Mead.

A 22 lb., three year old granddaughter of Aralia De Kol out of a daughter of Riverside Sadie De Kol Burke. Bred to King Aaggie Mead.

A 21 lb. three year old grandaughter of Colantha Johanna Lad. Bred to King Morco Alcartra.

A daughter of Prince Gelsche Walker out of a 1000 lb. dam that has a 30 pound 1000 pound daughter.

A granddaughter of Pontiac Korndyke bred to King Aaggie Mead.

A granddaughter of Aralia De Kol out of a 26 lb. three year old daughter of a 30 lb. three year old.

A daughter of Segis Pontiac De Kol Burke out of a 31 lb. dam. Bred to King Aaggie Mead.

A granddaughter of King of the Pontiacs, with 850 lbs. butter in one year as a 3 year old. Bred to King Morco Alcartra.

A first calf daughter of a cow that made over 27,000 lbs. milk and 1093 lbs. butter in one year.

A 22 lb. daughter of Albina Butter Boy, sire of the 40 lb. cow Albina Josie. Bred to Sir Aaggie De Kol Mead.

A daughter of Changeling Butter Boy out of a 26 lb. daughter of Tidy Abbekerk Prince. Bred to Sir Aaggie De Kol Mead.

A granddaughter of Aralia De Kol out of a 900 lb. half sister to Tilly Alcartra. Bred to Sir Aaggie De Kol Mead.

A daughter of Prince Gelsche Walker with a record of 701 lbs. butter in 305 days as a 3 year old. Now fresh.

A three quarter sister to the world's record heifer Miss Valley Mead De Kol Walker. Bred to Sir Aaggie De Kol Mead.

A daughter of Segis Pontiac De Kol Burke out of a 26 lb. daughter of King Meade of Riverside that made 644 lbs. butter in one year as a 2 year old. Bred to King Morco Alcartra.

Two daughters of a cow that made over 21,000 lbs. milk and over 925 lbs. butter in one year.

A daughter of Segis Pontiac De Kol Burke out of a dam that made over 19,000 lbs. milk and over 870 lbs. butter in one year.

Every female in this offering has a 1000 lb. yearly butter record, is out of a 1000 lb. dam, is by a 1000 lb. sire, or is bred to a 1000 lb. bull.

No sale of registered Holsteins ever held before has closely approached this one in respect to 1000 lb. yearly record breeding, and the opportunity is therefore unprecedented for the purchase of animals with yearly record backing that is being demanded more and more by discriminating buyers.

Every female in the sale is of milking age, and is either fresh or bred to a 1000 lb., a 1100 lb., or a 1300 lb. bull.

The females in this sale are bred to three of the most richly bred yearly record bulls of the breed: SIR AAGGIE DE KOL MEAD, son of the 1100 lb. junior 3 year old, Miss Valley Mead De Kol Walker; KING MORCO ALCARTRA, son of the greatest dairy cow in the world, Tilly Alcartra; KING AAGGIE MEAD, full brother to Aaggie Acme of Riverside 2nd, who holds the world's strictly official yearly butter record.

Every bull of service age in the Morris herd, except of course the herd bulls, is in this sale.

There are only ten young bulls of service age in the Morris herd, so closely have private sales kept the surplus down, and every one will be in this sale. It will then be well for every breeder and dairyman who wants one of the yearly record bulls from this herd, this year, to be on hand sale day.

Every animal in the sale is positively guaranteed to be a breeder; no animal is tuberculin tested.

THE
Manualo

The Player-Piano that is All but Human
The Instrument You Were Born to Play

EVERYBODY in your family will enjoy this instrument every day for years and years because you actually play it in the same sense that a good performer plays by hand. The Manualo responds to your musical feeling as expressed through the pedals, the same as it responds to one who plays on the keys. It gives you just the effect you instinctively desire—the delightful sensation of *playing* the piano. You have only to try the Manualo to realize its distinctive charm.

Send your name to nearest address for "Songs of Long Ago"—words and music of twenty-six favorites—and let us tell you how you can try this marvelous player-piano without obligation.

Household Department

THE MOTHER HEART

By Howard C. Kegley In Youth's Companion

Worn by long hours of toil and child-care,
She lay, asleep. Her trouble-furrowed brow
At last was calm. No trace of woe was there;
From restlessness she's freed herself, somehow.
The intonation made by shunted cars
At Elevated switches, shook the walls.
The ribald songs of men at rowdy bars
Were echoed and reechoed through the halls.
The noisy clang of the police patrol,
The hoarse horn hoots of spectral harbor boats,
Did not disturb the peace that held her soul.
Deaf-eared was she to all discordant notes.

The shrill voice of the midnight paper boy,
The church clock, striking twelve, in vibrant dome,
Met failure if their wish was to annoy
The strength-spent sleeper, in her humble home.
Quite undisturbed she slumbered on and on;
The night grew cold, the noises did not die;
Amid the clangor of approaching dawn
An infant breathed a faint but troubled sigh.
Whereat the woman rose and softly crept
Across the room. There, in the gloom, unseen,
She lingered where her dimpled baby slept,
To know just what that little sigh could mean!

THE FIRE, THE HORSE AND THE OYSTERS

An amusing story is told of Benjamin Franklin. He had been journeying all day on horseback, and was half dead with cold and fatigue, for it was in the depth of winter, the wind was bitingly cold and the snow was falling. When the shades of the evening began to fall he realized that it would be impossible for him to reach his destination, for it was still many miles away. The wind had turned to a hurricane, and snow was blinding him, and in the fast-coming darkness he was liable to perish in a snowdrift. He therefore began to look out for a shelter for himself and his steed, and great was his joy when he came upon a humble little wayside inn. However poor its accommodation might be, he felt he could warm his stiffened and almost frozen limbs, so he hastily dismounted, gave his horse in charge of the stable boy, with many injunctions as to taking good care of it, and hurried into the living room of the little inn, which did duty as parlor, dining room, and kitchen. In its great open chimney was the only fire in the house, and Franklin's disappointment was intense when he found that the landlord and all the guests previously arrived had seated themselves around it so closely that there was not an inch of space for him to squeeze through to get to it.

In vain he spoke of the bitter cold and storm he had been beating his way through; in vain he told of his intense fatigue and chafed his benumbed hands; the selfish occupants of the seats only hugged the fire all the closer, as if afraid of being asked to give up some of its warmth to this new arrival. As usual, Franklin kept his temper, and when, after a little while, the stable boy came in, he turned to him quite eagerly, saying:

"Did you give my horse a good rubdown, as I told you to?"

"Yes, sir, he's good and dry now."

"And did you give him that warm mash I ordered for him?"

"Sure, sir, and you bet he's enjoying it, too."

"And did I remember to tell you to give him his oysters? We mustn't forget to give him his oysters this cold day."

"Oysters! Why, bless your heart, sir, no hoss ever eats oysters?"

"You think not? Well, just try mine. Take him a dozen on a plate and you'll see what will happen," answered Franklin.

The astonished hostler went out with the plateful, as ordered, and a few minutes later every one else had rushed after him to see the wonderful horse that ate oysters, leaving Franklin the sole occupant of the room. With a quiet smile he seized one of the chairs, settled himself in the very best place before the fire, and comfortably warmed himself.

A few minutes later they all returned with the stable boy, who exclaimed indignantly:

"Didn't I tell yer so, hosses never eats oysters! And your hoss wouldn't so much as look at these yer!"

"Wouldn't he? The silly fellow," answered Franklin complacently, as he warmed his hands before the blaze. "Well, then, just give them to me here. I'll eat them for him."

BABY DON'TS

By Helena L. Knechtel, Del Mar

We look through numerous papers but we read the Cultivator. "'Nuf said." As to babies, who hasn't some advice to give? Some of my advice is:

Listen to all the advice offered and then try to forget much of it.

Have a regular time for baby's bath and give it at that time, not whenever it is convenient.

Keep your baby outdoors in the sunshine daily as much as you can. Do not let the sun shine directly into its eyes and face.

Everything it sees is new and strange. The eyes and ears are constantly sending new sensations to the brain. Do not overtax the baby's brain by trying to amuse it too much. How would you like some great big giant to "boo and bah" at you every time you got settled down comfortably?

If your baby can't do all the "stunts" you see other babies do, don't make it a bunch of nerves teaching them; you are trying to raise a strong, healthy child, not training a monkey.

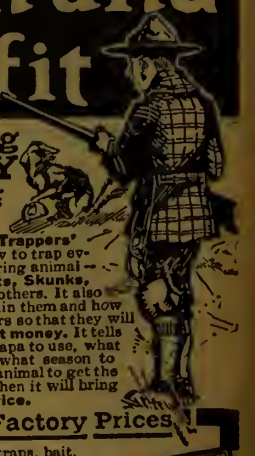
PUNISHMENT

By Minnie Embree Parker

The idea seems to be gaining ground that children should be ruled by love. So they should, but true love will remove undesirable traits of character even though it causes pain. What would we think of a mother who would not allow the physician to set a child's broken bone because of the suffering it would bring? The whole principle of government, from the highest to the lowest, is based upon laws to be obeyed, and if they are not obeyed inevitably punishment comes. How long would our national government exist if there were no punishment to the law breaker?

The old regime that was in vogue when father was a boy and his father

TRAP for Fun and Profit



Make Big MONEY
Prices Higher Than Ever

Stephens' New Trappers' Guide tells you how to trap every kind of fur-bearing animal—Coyotes, Muskrats, Skunks, Wild Cats and all others. It also tells you how to skin them and how to preserve their furs so that they will bring you the most money. It tells you what kind of traps to use, what bait is best, just what season to catch each kind of animal to get the fur in its prime, when it will bring you the highest price.

TRAPS at Factory Prices

Stephens sells traps, bait, smokers, knives and other trappers' supplies at rock bottom prices. Write today for Big, New, Illustrated Trappers' Guide containing Game Laws; Trappers' Supply Catalog, Fur Price List, Shipping Tags—ALL FREE.

interviewed him in the woodshed occasionally, made sturdier men and better citizens than the weakly, "lovey dovey" style of today. And the child will have more respect and love for the parent who is strong in will and character than for the one who weakly allows a strong willed child to have his own way.

We must not make the mistake of allowing feeling to rule. The needed punishment must not be omitted because we cannot bear to cause pain, and it must be administered thoroughly in spite of the remonstrance of the subject, for we cannot allow wrong traits of character to remain any more than we would allow the child to go with a dirty face because he cries when it is washed. On the other hand punishment must never be administered in anger. We must get rid of the idea held by the mother to whom her boy's teacher sent a note concerning his misconduct, asking her to punish him. She sent back this word, "You whip him yourself; I'm not mad at him." If the parent keeps in mind always that it is for the child's good that he should yield to authority and that he must be taught that lesson even at the expense of present suffering in order to avoid the greater suffering of the future, any necessary punishment can be administered in love and the child will know that it is just and will respect the parent for it.

If the lesson of yielding to authority has been taught from earliest infancy I believe that the whip can be largely laid aside as the child grows older. Physical pain is the only thing that a baby can understand, but if a child has been properly taught from the first day of his life, as he gains in intellect anything that will help him to reason from cause to effect and see that a wrong course of action will result disastrously will be sufficient. Be always firm and kind. Do not allow something one day that you punish for the next. And be sure that the child understands what is disallowed. Make the penalty naturally follow the transgression; if privileges are abused, deprive him of them. When a child is old enough to know that his hand will be burned if he puts it into the fire, he can learn that if he runs away he will be deprived of his liberty and that it will be just as sure to bring that result as that the fire will burn the hand. As a general rule, especially with older children, do not punish before company, but be sure that the necessary correction is not forgotten when the visitor has gone; and never at any time fail to fulfill a promise of punishment or of reward.

One writer has said: "It is the nicest work ever assumed by men and women to deal with youthful minds." It requires wisdom and tact and much love and firmness, but it is a paying proposition as many parents can testify. The reward of having well behaved, lovable boys and girls preparing to shoulder the burdens of life is sufficient to repay the faithful labor of years.

FALLBROOK SUBSCRIBER SENDS HINTS

By Mrs. D. Douglass, Fallbrook

The Useful Flour Sack

Looking over a few old Cultivators I see a good article in January 25 issue on using flour and sugar sacks. I have used sacks in all these ways except for sheets and napkins, even the 50 pound sacks. Where we have so many I have made underclothes and nightgowns. I have two tablecloths made from four sugar sacks that I have used for two years every day week about. I have seen a dressing sacque made from two sugar sacks dyed a pale blue with white insertion trimming. It was very pretty. My neighbors have dyed flour sacks, 50 pound, and covered comforts. I made an apron with one 100 pound sack for the lower part, rounded the two lower corners, put it on a band and took a smaller sack and made a bib, and I am very proud of it. It makes a fine cooking apron.

Cook Green Tomatoes

Now that we have so many green tomatoes on hand maybe you would like to try a new dish I have just tried and like very much.

Put two small onions and two green pimentoes cut up small in a saucepan to stew. Peel five green tomatoes, chop up small and add salt, pepper and butter to taste. Nice for a change.

TWO HOME MADE REMEDIES

By Mrs. C. E. Thome, Tulare

Honey-Horehound Candy

Now is the time for coughs, colds, bronchial troubles and threatened pneumonia. I send some home made remedies which I have found very helpful in our own family.

For that dry, hacking, tight cough: One cup sugar, one cup extracted honey, one cup strong horehound tea. Boil about 30 minutes. Pour out on buttered platter. With a knife fold in the edges till it can be worked with hands, then pull like molasses candy. Work it as long as you can for honey candy is inclined to be sticky. At last pull out in a long smooth rope, lay on a moulding board and with shears cut in lengths just right for a mouthful. Dust with sugar and cornstarch.

Coal Oil Liniment

Here is a liniment given to me by a pioneer woman now dead. We simply could not get along winter nor summer without it.

Mrs. Kellogg's coal oil liniment for colds, pneumonia, sore throat, cuts and bruises: Equal quantities lard, cottolene, or olive oil (I use Wesson oil), turpentine, coal oil; one teaspoon spirits camphor to an ounce of the mixture.

For colds rub chest and back after setting bottle in warm water. For threatened pneumonia apply hot and cover with hot flannels several times a day. It can't be beat for sore throat. Take a piece of cotton cloth about three inches wide and long enough to go a little more than round the neck. Now soak a place in the middle of the cloth, put the wet place on throat. Now take a dry cloth, five or six thicknesses old outting is best, put over the other cloth and fasten with a couple of safety pins. Go to bed and when you get up in the morning take cloths off and repeat next night.

HOW TO MAKE GRAPEJUICE AT HOME

A little late for this season's use is a bulletin under above title, just issued by the United States department of agriculture. It gives methods of making at home presses, filters, etc., with plain drawings illustrating each step in the process. Extraction of juice by the cold press and hot press method both are given.

Embodying the results of this season's experiments it will be found most valuable to have on hand for next year's work. It will be well to send for it at once before the supply is exhausted. It is mailed free to any address in the United States upon request to Division of Publications, United States Department of Agriculture, Washington, D. C.

Here is an outline of steps to be followed, which perhaps will be sufficient for an experienced housekeeper:

Select best available variety.

Coleman Quick-Lites
are best, because they

—Give 300 candle power pure white light. More light than 30 oil lamps or lanterns.

—Make and burn their own gas from common motor gasoline.

—Light with a match and require no special torch.

—Have no wicks to trim nor globes to wash — no soot, no smoke, no odor.

—Will burn in any position, can't spill—no danger if tipped over.

—Burn without glare and flicker—no eye strain.

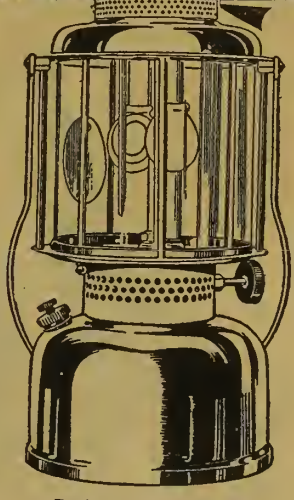
—Will last for years—Built of heavily nickeled brass—many still in use after ten years of service.

—Cost only a fraction over a cent a night to operate.

Style CQ 329, Price $9.50

Just the Thing for Christmas!

Make this Christmas one of greater happiness for every member of the family. How? Simply include a Coleman Quick-Lite among the gifts you bring home on Christmas eve. It will be hard to find any gift which will bring greater joy to the home circle during the festive season or be more appreciated every evening throughout the year. Can you picture your own living room brilliantly lighted by the pure, white radiance of the Quick-Lite Lamp? How marvelous it is, and how cheerfully it floods every corner with the Christmas spirit! So eye-restful, so convenient—without one of the imperfections of electricity, gas or oil.



Style LQ 327, $8.50

Coleman Quick-Lite
Lamps and Lanterns

Every home needs the Quick-Lite Lamp for reading, sewing and general night work indoors, and every home needs a Quick-Lite Lantern for feeding, milking, repairing and every kind of night work out of doors. The Quick-Lite Lamp is handsomely designed, so that it is an ornament in any home. Equipped with Universal Shade Holder. The Quick-Lite Lantern is durably built for long, hard service. Mica globe stands rough handling. Can't blow out in the wildest storm. Most convenient light known for farm use.

Buy it now, so you'll be sure to have it for the "big surprise" of Christmas day. See the demonstrations of Quick-Lites at your dealer's now. You can't be too early this year, for the demand will be very heavy.

15,000 dealers everywhere sell Quick-Lite Lamps. Lanterns and Lighting Plants. If yours can't supply you write nearest house.

STANDARD OIL COMPANY
CALIFORNIA

Gather fruit that is fully ripe, sound and clean.

Crush fruit.

Cold Press Method: Press juice from grapes without heating. Allow to stand from four to six hours for settling.

Hot Press Method: If you have not a fruit press place crushed grapes in enameled vessels. Heat with constant stirring to 175 degrees Fahrenheit, using a thermometer for testing. Hang fruit up in a drain bag. Press to liberate the hot juice. Allow the juice to stand and settle until cold (6 to 12 hours).

Strain through clean doubled cheese cloth without disturbing sediment.

Sweeten, acidify, or blend, if necessary.

Filter through flannel jelly bag.

Fill fruit jars to neck and cover with glass tops.

Place in a pasteurizer having a false bottom, with tops of jars two inches above water level.

Heat in closed pasteurizer to 185 degrees Fahrenheit, testing temperature in jars with thermometer.

Seal jars and remove from pasteurizer.

Store in cool, dark, dry closet until juice is cleared by the crystallization and precipitation of argol (4 to 12 months).

Transfer to bottles, filtering to free juice from sediment.

Cap bottles.

Pasteurize bottles by submersion method at 180 degrees Fahrenheit.

Remove bottles, placing on sides, and allow to cool.

Dip tops corked bottles in a melted mixture consisting of equal parts of rosin and beeswax.

Store bottles (on sides) in a dark, dry, cool room.

Label bottles with the name of product, variety of fruit, net quantity of contents, and name and address of maker.

BALANCED MEATLESS MEALS WITH LIMA BEANS

A series of 12 meatless menus with recipes has been issued by the California Lima Bean Growers Association, Oxnard. Manager Churchill of the association writes:

"The menus and recipes were compiled and tested by the School of Domestic Arts and Science, Chicago. They are authentic and you will find them to be practical, workable, delicious and economical. Of course few people would want to do without meat entirely because meat is good food and its flavors are attractive. But meat is your largest food expense if you buy as the average woman does. The main food element in meat is protein. The same protein in lima beans costs from one-third to one-half as much. The flavors that you will find in these lima bean dishes are delightfully satisfying, in fact they will be an attractive change from meat flavors. Remember that the menus provide perfectly balanced meals. The fat that meat would supply is furnished in other foods included in the menus, as well as valuable mineral salts and carbohydrates."

These, we believe, will be mailed free on request to any reader of the Cultivator.

The Cultivator reprints here four of the menus and other receipes:

* * *

Cream of Lima Bean Soup—Croutons, Celery, Apple Tapioca Pudding.

Lima Bean Soup

One cup dried lima beans, six cups cold water, one onion, one slice carrot, one cup milk, two tablespoons fat, two tablespoons flour, salt, pepper.

Soak beans over night. Drain, add water, cook until soft and rub through a sieve. Cook onion and carrot in fat, remove vegetables, add flour, seasoning and bean puree. Add milk, strain and reheat. Serves about five.

* * *

Lima Bean Chowder, Wafers, Olives, Celery, Baked Apples.

Lima Bean Chowder

One cup dried baby lima beans, one small onion, one-half can tomatoes, one-eighth teaspoon soda, salt, one-quarter teaspoon pepper, two tablespoons butter, one tablespoon flour, one and one-half cups milk.

Cut onion very fine and brown in one tablespoon butter. Put beans in kettle. Add seasonings. Cover with

The Day After Christmas

One gift stands out above all the others—the one that you can use at once for good, hard, rollicking play.

The Auto-Wheel

You can jump right on it on Christmas morning, and you'll *know* it's Christmas. And then the next day, and the next, and on through your boyhood, your Auto-Wheel is your most dependable friend. Always ready for fun or work. Somehow, it coasts faster than the others, and it's easier to pull with a load.

It has real roller bearings, and the steel tires and axles make it strong and long-wearing.

There Are Two Types

Auto-Wheel Coaster
—the old reliable—a marvel for coasting and general use.

Auto-Wheel Roadster
—two wagons in one. Open up the sides and you have a box-wagon. Fold them toward the center and there is the snappiest roadster you ever saw. And it takes but a moment to make the change. Put the Auto Wheel on your Christmas list The other fellows want it, too. And when you all gather for the first coast—form your Auto-Wheel Coaster Club. We'll send you a cap for each member, and a special cap for the Captain, as soon as your club is organized.

FELT PENNANT FREE—Send us the names of 3 local dealers, telling which one handles the Auto-Wheel. We'll send you a handsome Felt Pennant and Auto-Wheel Booklet, showing these wagons in detail.

Write us at once, so you can show the folks what your Christmas present ought to be.

How long does a pound of tea last?

Depends on the tea.

Fine tea has more cups of real tea-flavor to the pound than common tea.

On the other hand, you drink more: it is so good.

Think this over; and try Schilling Tea, the fine practical economical tea of this country—your money back (at your grocer's) if you want it.

There are four flavors of Schilling Tea—Japan, Ceylon - India, Oolong, English Breakfast. All one quality. In parchmyn-lined moisture-proof packages. At grocers everywhere.

Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

PATTERN DEPARTMENT

California Cultivator
Los Angeles.

water and simmer until tender. Make white sauce of one tablespoon butter flour and milk. Add to chowder and cook until slightly thickened. Heat tomatoes, strain and add soda. Add to chowder just before serving. Serves about five.

* * *

Baked Lima Beans, Cucumber and Radish Salad, Brown Betty, Sterling Sauce.

Baked Lima Beans

Place a layer of boiled lima beans in a baking dish, add a little green pepper, salt and sprinkle the layer with dry bread crumbs. Add another layer of beans and seasonings. Cover the top with buttered crumbs, and bake in a moderate oven about 20 minutes.

* * *

Lima Bean Croquettes, Spinach, Fruit Salad, Wafers.

Lima Bean Croquettes

One cup baby lima beans, cold water to cover, one-half cup rolled dried bread crumbs, three tablespoons milk, one-half teaspoon salt, pepper one teaspoon sage, onion juice, one egg.

Soak beans over night in cold water. Drain and cook in boiling water until soft, then force through a puree strainer. Add crumbs, milk, seasonings, and egg, beaten slightly. Shape in the form of croquettes; dip in egg and crumbs and fry in deep fat. Serves about five.

* * *

Lima Bean Souffle

Two cups cooked lima beans, two tablespoons butter, one teaspoon salt one-eighth teaspoon pepper, one-third cup milk, two eggs.

Put beans through a sieve, add seasonings, butter and milk. When thoroughly blended add well beaten egg yolks. Fold in stiffly beaten whites Turn into buttered baking dish, set dish in water and bake slowly until firm. Serves about five.

Succotash

One cup cooked lima beans, one cup cooked corn.

Mix lima beans and corn; season with butter and salt and heat before serving.

Lima Bean Puree

One cup lima beans soaked over night in cold water and cooked until tender. Put through sieve and add seasonings and butter. Beat well and serve very hot. Serves about five.

Lima Bean Fritters

Two cups cooked baby lima beans, one cup flour, one teaspoon baking powder, one and one-half teaspoon salt, one-quarter teaspoon paprika, two eggs.

Chop beans, add dry ingredients mixed and sifted, then add well beaten yolks and fold in stiffly beaten whites Cook on griddle or frying pan. Serves about five.

Lima Bean Salad

Mix equal quantities of baby lima beans and celery cut in one-quarter inch pieces. Marinate with French dressing, garnish with sections or slices of tomatoes, and serve on lettuce with mayonnaise or cooked dressing.

Scalloped Lima Beans

Put a layer of boiled lima beans into a buttered baking dish, sprinkle with salt and pepper. Repeat, then add enough white sauce to cover. Add buttered bread crumbs over the top and bake in a moderate over 20 minutes.

THIS WEEK'S PATTERNS

Another Christmas help is offered in Pattern 3061, a dress, cape and cap for Dolly, all for ten cents. The little girl's dress opposite would also make some little girl and her mother very happy on Christmas day.

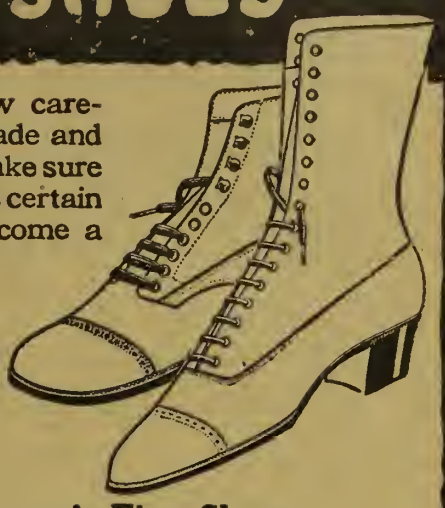
The dress in upper left corner is soft and graceful looking, as if it might have been designed for a home Christmas celebration. In silk or wool with touches of embroidery, it would be lovely. Also any home dressmaker will see the make-over possibilities in such a pattern and the one opposite.

The wide round collar and cuffs form a very dainty feature of the girl's dress 3035. An apron dress that buttons in front will appeal to many housekeepers in Pattern 3049.

Mayer

MILWAUKEE Mayer CUSTOM MADE HONORBILT

HONORBILT SHOES



IF you only knew how carefully every shoe is made and what steps we take to make sure of unvarying quality, it is certain you would promptly become a wearer and booster for Mayer Honorbilt Shoes. Right now it is essential that your shoe dollars should buy the utmost in value. You can always depend on *Honorbilt* values.

Men's and Women's Fine Shoes

Honorbilt Fine Shoes for men and women can be had in all the very latest styles. Neat and graceful, correct in detail, perfect fitting and comfortable. And the wearing quality never fails. Honorbilt Shoes are built to last.

Work Shoes

Honorbilt Work Shoe leather is double tanned to resist the alkali in the soil, as well as barnyard juices. They are soft and easy on the feet, yet long wearing and will not get hard when wet. Honorbilt Work Shoes will give double the wear of ordinary shoes.

Children's Shoes

You can't blame the children if they scuff out some shoes in a hurry. But that doesn't happen to shoes that bear the Mayer *Honorbilt* trade-mark. They are made of honest leathers and are sound and solid—School Shoes and Fine Shoes—built for comfort for growing feet. *They wear like iron.*

Buy Honorbilt Shoes for your whole family. Leading dealers sell them. Look for the trade-mark on the soles.

FARM LANDS FOR SALE

136 Aere Combination Ranch For Sale—Will consider five to ten thousand dollars on exchange—Improved, well located, —town or country property. Ill health reason for selling and if anything taken in trade must be something not involving constant hard work. Price for the 136 acres, twenty-five thousand dollars,—which will include personal property as follows: Thirty to forty tons oat and barley hay; ton and half kaffir corn; good heavy work horse, harness, wagons, general farm tools, chickens, and considerable household furniture. If straight sale —no trade—will accept half cash and reasonable terms on balance; any property taken in trade must be free from incumbrance. Would sell on contract,—seven thousand dollars down and furnish deed when half purchase price paid up. Would consider selling ninety acres separately, the selling price depending upon which ninety taken. Location, two miles south of Fallbrook, Cal. (state highway) one-quarter mile east of said highway on public road; the cream of the entire frostless Fallbrook district; 600 acres of citrus orchards in this immediate district—and bound to become one of the highest grade citrus districts in the state; no artificial means ever used here to fight frost. Lemons and oranges adjoining this property. San Diego County has recently voted nearly three millions in bonds for boulevarding the highways through Fallbrook connecting with all other main boulevard arteries. San Diego has recently completed direct railroad through to the east via Imperial Valley, which will handle through eastern traffic, freight and passenger,—instead of the old route via Los Angeles. In consequence of these two advantages, coupled with the fact that the FROSTLESS FALLBROOK district is being "discovered" by citrus experts has very materially boosted prices on what APPROVED acreage there is left in this immediate district where ample water is assured. The citrus land hereabouts is all of the higher, more or less rolling land, affording perfect circulation and air drainage; and on this ground even winter vegetables, including peas, beans, etc. can be grown all winter with entire success. Fallbrook is located 105 miles south of Los Angeles via the coast route; or 115 via the inland route; 55 miles north of San Diego and like distance south of Riverside. Twelve miles to the ocean (air line) sixteen via highway. Altitude 500 feet. As fine all the year climate as in California. Fallbrook has Association packing house and cannery. New $25,000 high school; new $20,000 Santa Fe depot. Bus nicks up school children from this neighborhood. Of the land I offer there is around eighty or ninety acres of as high grade citrus land as in the state and an abundance of water two sides of the property within five or six feet from surface; good supply for pumping at thirty feet; or natural reservoir can be graded out to conserve millions of gallons and always be full. No blasting for tree planting; good alluvial soil; of the flat land there is around 25 to 30 acres available for alfalfa, largest portion of which will not require any irrigating (alfalfa adjoining.) Perfect hog pasture, with shade, permanent water; some good walnut land; good almond land; good dairy proposition; poultry, turkeys, potatoes, —in short any kind of farm crop as well as any kind of trees and other lines mentioned, the land is so diversified. Land practically all under cultivation. Nearly $5,000 in crops taken off this past season. New buildings; few acres of walnuts and large family orchard. My sale price 40 to 50 per cent lower than anything offered in California. C. E. HOWLAND, Owner, Fallbrook, California.

For Sale—Near Indio, Coachella Valley, 80 acre ranch on highway, mostly in cotton, finest date, early grape, onion, cotton, alfalfa, truck land. Leased $2,000 cash or third crop. Close estate $20,000. Also fine virgin 80 $5,000, 10 with water $1,600, 10 acres five early grapes ($3,000 crop) $7,000. Onions paid $1,000, grapes $600, cotton $400 acre. Dates more. Abundance pure, cheap water. Come and see. Arthur Cardwell, Coachella, California.

Prune and Apricot Orehards for sale, all sizes; full hearing, well located, with improvements, for $1,500 to $2,000 per acre. DAIRY RANCH, 170 cows, 432 acres leased land, near town and depot. 70 ACRE MOUNTAIN ranch land; good; 1,000 cords oak wood; $40 per acre. 51 ACRES best pear land, house, barn, lots of water, good location; $375 an acre. Address John G. French, Santa Clara, California.

Will Sell 80 acres undeveloped from my 320 acre alfalfa, pear and apple ranch in Antelope Valley, 8 miles east from Lancaster, identically the same soil and water conditions and adjoining the 240 acres now developed; 70 to alfalfa, 20 to apples and 10 to pears, balance to barley, kaffir and rye; 28 foot water lift, rich silt soil. See or write W. B. Stirdivant, 909 Baker-Detweiler Bldg., Los Angeles.

Snohomish County, Washington — 6,000 acres of the finest dairy, berry or general high grade farm lands in the northwest; rapidly improving section; no drouths, bumper crops; tracts, 1 to 80 acres; ten yearly payments. This is your opportunity. Send for literature. Brownell Land Co., Birmingham, Washington.

For Sale—240 acres good alfalfa and orchard land; good climate; 58 miles from Los Angeles. All fenced and cross fenced. Also have some improved land nearby. John Rouff, Palmdale, California.

For Sale—Relinquishments from $50 to $1,000; also well drilling rig for sale or lease. Proven water district; fine opportunity for contract water well work. A. C. Vestal, Wagner, California.

FARM LANDS FOR SALE

For Sale—Orange Cove, Tulare County. 20 acres naveis, 5 Valencias, 3 lemons; 5 year old and good crop now on trees. Good well and new pumping plant. All under ground 8-inch cement pipe line and 12-in., 4-gate valve stand pipe for each tree row. On paved boulevard, and one mile to town, school and packing house. Orange Cove is one of the live young towns of the valley and the safest place for oranges in California. Not frostless, but safe for oranges. For price and information see M. S. ROBERTSON, 313 Story Bldg., Los Angeles, 63724.

200 ACRE MISSOURI FARM, $5,500, WITH PAIR HORSES, 9 head stock, complete farming implements, near RR. town, creamery, etc. Productive tillage in rich bottom land, also 40 acres bench or 2nd bottom; good woodland, saw timber, several acres orchards; 6-room house, barns, corn houses, etc. Aged owner to sell at once sacrifices, $5,500 for all, easy terms. Details page 88 Strout's Fall Catalog Farm Bargains 23 States; copy free. E. A. STROUT FARM AGENCY, 831 A. G. N. Y. Life Bldg., Kansas City, Missouri.

For Sale—56.48 acres in famous Natomas bean, pea, pear and alfalfa district. Abundance of water for irrigating. Barn and domestic well. Twelve miles from Sacramento on paved boulevard. Only $250 per acre. No agents. Box 1850 Motor Route A, Sacramento, California.

Cheap—80 Acres best land in San Bernardino County. One mile from Hinkley. Water abundant. Close by school. Belle Warren, Paradise Valley Sanitarium, National City, California.

Best Land Buy in the State—For particulars and description refer to this column of Cultivator of November 8th and write: Wm. H. Overholtzer, Coachella, California.

For Sale—46 acres of land near Compton on Long Beach Boulevard corner Orange Street. Two Holt caterpillar plow engines, 1-45 H. P.; 1-75 H. P. practically new. R. Mangold, Compton, California.

For Sale Cheap—40 acres improved, good irrigated land ¾ mile from Gridley. D. L. Smith, Gridley, California.

CATTLE

Special Notice—to every cow owner. We all admit it's a pleasure to milk a cow that doesn't KICK or step about or switch her tail when being milked. If the opposite happens it's most enough to annoy a Preacher. All these bad habits are entirely overcome by the use of Our MILKMAN'S COW CLAMP. It's safe for both cow and milker. It makes a vicious kicker stand as quiet as a lamb. In Fly time no Bang Bang on your head with her tail. She stands quiet while you milk with peace and safety. It is simple, easily adjusted, put on and removed in half a minute. Makes milking a pleasure. One user remarked, "It's worth its weight in gold." No getting out of order, will last a life time, order one today and be happy forever. Price prepaid—$5.00 or five for $20.00. Solicit your neighbors and get yours free. Send P. O. Money Order made payable to I. S. Overholtzer, R. 1, Box 13, Covina, California.

Dairy Cows—Are putting in long staple cotton and will sell fifty or more finest New York grade Holstein cows. Excellent producers and as good grade cows as money can buy; 1,100 to 1,500 pound. Price $175.00 per head. Telegraph J. G. Peterson, Mesa, Arizona.

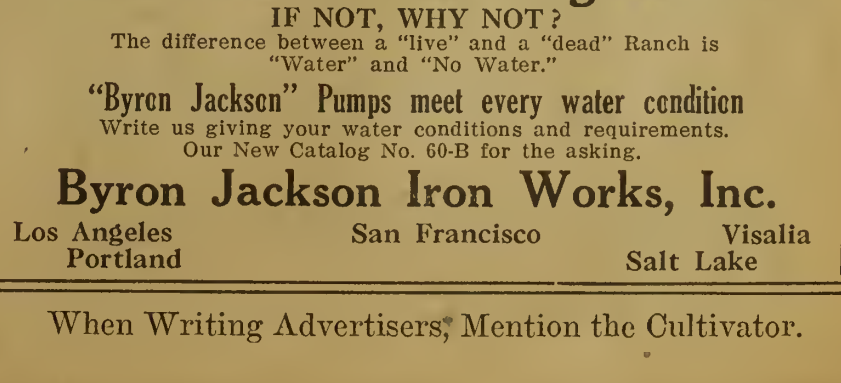
Killefer Efficiency

KILLEFER QUALITY

Combination Subsoiler and Fertilizer Furrow Plow



Put Manure Into the Ground Where It Will Do the Most Good

Our Subsoiler is easily made into a Furrow Plow by changing standards.

The Furrow Plow is handled from the seat of the tractor and is strong enough to go into any ground and make a good furrow.

Subsoil your orchard first. Break your soil so the water can get down into it, then attach the plow standard to the Subsoiler frame and open up a furrow. Then put the manure into the ground.

This is the method employed by some of the most successful growers.

Write for catalogue and price, also our booklet on Deep Tillage.

RU-BER-OID
and
MALTHOID
READY ROOFINGS

The cheapest coverings you can buy

Good ready roofing costs *less to buy and apply* than practically all other coverings. In addition to this, good ready roofing will provide dependable protection indefinitely with the minimum of attention—a coat of good roof paint such as Ru-ber-oid Roof Paint and Malthoid Roof Coating every few years.

Good ready roofing is therefore the cheapest kind of roofing you can buy.

Ru-ber-oid and Malthoid roofings are made by one of the oldest and largest industrial concerns on the Pacific Coast — an institution known throughout the world for high quality of products and for square dealing. Not only does this Company turn out Ru-ber-oid and Malthoid in finished form, but also manufactures the *raw materials* — felt and saturating and coating compounds — all supervised by experts.

When you build, remember that it pays to roof with Ruberoid or Malthoid.

Poultry Queries

Conducted by J. A. Koethen

Pullets Molting

White Leghorn pullets hatched March 15 and started to lay about middle of August and laid well until end of October. Beginning this month the egg records started to fall off gradually and I have noticed that about one dozen of them are not in laying condition. Some of their combs dried up and others are molting. The rest are in good laying condition. Would it be more profitable to sell non layers now or hold through the winter till they start laying?—Subscriber, Orange.

Fall molting of pullets is one of our problems in this climate.. January and February pullets nearly always go through a molt in the fall, and March pullets, if the weather is unusually hot or they have been forced for egg production, often go into a light molt in October or November. Sometimes this can be prevented by putting them on a ration which postpones production till the birds are well grown and thoroughly matured, but once the molt has commenced the only way out is to feed heavily in order to furnish material for new feathers as well as for eggs. A feeding of moist mash in the evening just before the pullets go to roost is recommended by some poultrymen. Others give the mash in the morning. Others give additional corn and add oil cake meal to the mash. If you can get your pullets into laying condition by the first of January it will be more profitable to keep them for they will lay eight or nine months before they molt again, and it costs a good deal to bring a pullet up to laying age. Try feeding them all they can be induced to eat and see if they do not soon come back into laying form.

Ventilating Poultry House

An open front and slats in the gable are the only means of ventilating my poultry house which holds 1,000 hens. Lately I have noticed some colds in the flock. Can the slatted gable be responsible?—Mrs. J., Escondido.

Most poultry houses are ventilated by a window under the droppings board for summer use, as well as by the open front which is never closed, and [illegible]way along the front from sec[illegible]ion. If you cannot conve[illegible]ke a window under the d[illegible]oard you might leave the [illegible] gable but cover them for [illegible] with tar paper or burlap. [illegible]d winds blow a draft is quite [illegible] drop upon the heads of some [illegible]irds. They will get plenty of fre[illegible]air for the next six months if the gable is closed, and you can remove the covering when the weather demands it.

Determining Age of Hens

A year or so ago I saw in your paper that a professor in one of the Canadian experiment stations had perfected a method of telling the age of hens by the development of the wing feathers. I cannot now find the article and would be glad if you could repeat the information.—Subscriber, Santa Cruz.

We have been unable to find the information asked. It is often possible to distinguish between yearling and two year old hens by their general appearance. The plumage of the older bird is faded, if she is of a colored breed. She is heavier, unless she is a Mediterranean, and her comb and wattles lack the silky texture of a younger hen. It is much safer, however, to depend on numbered or colored bands, or, if the flock is large, on complete segregation, than on mere looks.

Portable Tarred-paper House
From Mrs. Koethen's "Poultry for Profit."

Toulouse Geese

Can you furnish me the names of breeders of Toulouse geese as near this locality as possible? I have the parents and nine young geese that were hatched in March of this year but cannot tell which are the ganders. Can you suggest any method? Would the eggs from these young geese be suitable for setting? If I am unable to secure a different gander would it be advisable to mate the parent gander with his offspring?—Subscriber, Los Olivos.

I have mailed you the names asked for. As the goose is not fully mature till three or four years of age it is not wise to attempt to breed from birds under two years old. Fertility is always poor and the young, if they do hatch, are likely to be weak and undersized. Weight and general behavior are the only distinguishing marks of sex in geese before they mature. The gander is generally heavier and has a hoarser voice. He also makes more noise. I have been told that only ganders hiss but do not know how true this is. A method used by English farmers to find out the sex of their young stock has been given be-

POULTRYMAN'S CALENDAR—DECEMBER, PREPARING TO HATCH

Anticipate the hatching season by having brooders and coops in readiness. Each one should be carefully cleaned, first with water, then with one of the coal tar disinfectants. Brooder houses should receive the most careful attention to make sure that their walls harbor neither vormin nor disease germs.

Breeders should be mated two weeks before eggs are to bo saved for hatching.

Considerable loss will be avoided if hatching eggs are not kept more than ten days. After this age the germ deteriorates rapidly.

Get in orders for eggs and chicks early. Pullets hatched before the first of April aro tho most profitable.

The Pride of Petaluma

KRESKY'S 1920 VENTILATING brooder stove forces proper ventilation in spite of the operator and sweeps the room with FRESH AIR. PETALUMA'S latest sensation and result getter. TRY it. Keep it if you like it, or send it back if you do not.

For Sick Chickens

Preventive and curative of colds, roup, canker, swelled head, sore head, chicken pox, limber neck, sour crop, cholera, bowel trouble, etc. Mrs. T. A. Morley of Galien, Mich., says: "Have used Germozone 17 yrs. for chickens and could not get along without it." Geo. F. Vickerman, Rockdale, N. Y., says: "Have used Germozone 12 years; the best for bowel troubles I ever found." Frank Sluka, Chicago, Ill., writes: "I have lost but 1 pigeon and no chickens in the 3 yrs. I have been using Germozone." C. O. Petrain, Moline, Ill.: "I never had a sick chick all last season." Bernard Horuing, Kirksville, Mo., says: "Cured my pullets chicks this spring." Ralph Wurst, Erie, Pa., says: "Not a case of white diarrhoea in 3 yrs. I raise over a thousand a year." Good also for rabbits, birds, pet stock.

GERMOZONE is sold generally at drug and seed stores. Don't risk a substitute. We mail from Omaha postpaid in new 25c, 75c and $1.50 sizes. Poultry books free.

fore in these columns but may perhaps be repeated. It is said they pen the young birds up with a dog. The females are frightened and try to get away, but the males stretch out their necks and hiss.

Chicken Lice in Barn

Our horse is in a shed next to our chicken house which opens into the stable. The opening is covered with wire netting. Is there any chance of his catching lice from the chickens?—Subscriber, Corning.

Yes, there is danger of the lice infesting the stable providing they are permitted to live in the poultry house. The only preventive is thorough disinfection and cleaning with sprays, whitewashes, etc., both the poultry house and the stable. If the horse is already infested relief should be given by disinfecting, washing or by using lice powder. Thorough application of buhach will afford relief.

RESULTS OF ALL NORTHWEST CONTEST

By Jean A. Koethen

The Third All Northwest Egg Laying Contest closed November 4, 1919. According to the announcement just published the hen laying the largest number of eggs in the 11 months of the contest laid 290 eggs. The record of the second hen was 278 eggs. Both these hens were White Leghorns. The third score was made by a Rhode Island White with 271 eggs.

The pen making the highest record was one of White Wyandottes, in which the five hens entered laid 1,211 eggs. The second and third pens were White Leghorns, the first laying a total of 1,202 eggs and the third 1,176 eggs.

The two Leghorn hens which made the highest record also laid the most valuable eggs, the value of the eggs being respectively $13.18 and $12.64. The third hen in actual value of eggs was not the R. I. White which took third place as a producer, but a White Wyandotte whose eggs were valued at $12.10.

The report gives no figures as to cost of a dozen eggs or the actual net profit. These figures will probably be given later.

CALIFORNIA EGG LAYING CONTEST STARTED

The 408 pullets entered at the California Farm Bureau Egg Contest started on their official test on the morning of November 16.

On account of the change in housing, feeding and other general care, and also in many cases climate, the hens are not up to their best for the first week, while many of the outside birds, those coming from other parts of the state, have been thrown into a molt. The Santa Cruz birds as a whole are doing the best due to having undergone the least change.

Highest records for the week are as follows:

Highest Pens

W. J. Neef, Santa Cruz, 35 eggs.
F. Stalling, Santa Cruz, 34 eggs.
Hollis Peck, Santa Cruz, 34 eggs.
C. T. Brown, Santa Cruz, 33 eggs.
C. K. Hale, Santa Cruz, 32 eggs.
Theo. Clark, Santa Cruz, 31 eggs.
B. F. Rose, Santa Cruz, 30 eggs.

Highest Hens

Warren Wood, Santa Cruz, Hen No. 225, 6 eggs.

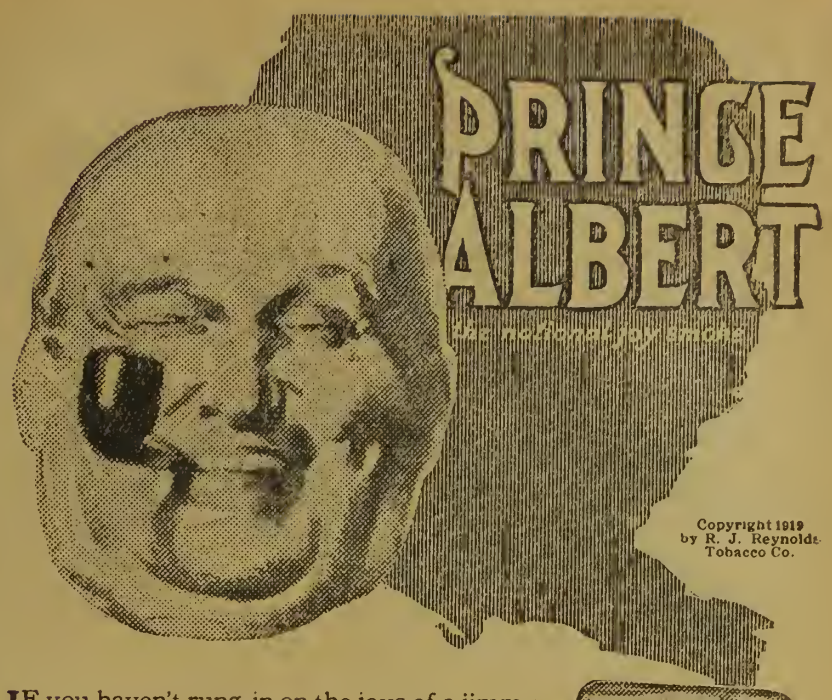
Hollis Peck, Santa Cruz, Hen No. 383, 6 eggs.

R. C. Gibson, Newhall, California, Hen No. 66, 6 eggs.

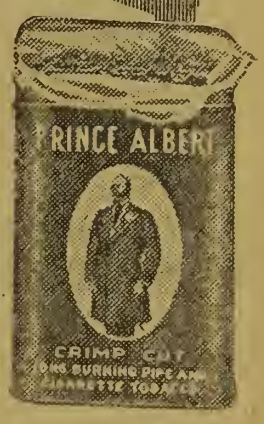
LOS ANGELES POULTRY SHOW

The premium list of the 22nd annual show of the Los Angeles Poultry Association, to be held December 7 to 13, has been issued and is now being mailed by Secretary W. H. Hocking of Los Angeles. Mr. Hocking writes regarding the judges who have been chosen:

In James Tucker, W. M. Coats and W. S. Russell we have the best trio of judges that ever officiated at a Western show. A blue ribbon under these judges will be something worth winning. We are offering this year more cash prizes and silver cups than were ever before offered at a Pacific Coast show.



IF you haven't rung-in on the joys of a jimmy pipe with Prince Albert for packing you certainly want to get introduced inside the next hour! Talk about a pal-party! Why, it's like having a pass on a park merry-go-round early in June!



For, Prince Albert has brought pipes into their own—led *three men* to the utmost tobacco happiness where *one man* smoked a pipe before! P. A. has blazed the trail for thousands who figured they would have to do "Kitchen Police" on pipe smokes the rest of their lives! Thousands more have taken the tip to roll their own with Prince Albert!

So, climb into the P. A. pipe or makin's cigarette pastures and have a session! You'll soon get wise, all right, that Prince Albert never did bite the touchiest tongue in your township—and, it's a brace of aces against a two-spot that it never will fuss yours! Read on the reverse side of every Prince Albert package that P. A. is made by our exclusive process that *cuts out bite and parch!*

Give Prince Albert the speed-o taste-test and tongue-test *if you want to sing-smoke-songs-at-sunrise!*

Toppy red bags, tidy red tins, handsome pound and half-pound tin humidors—and—that classy, practical pound crystal glass humidor with sponge moistener top that keeps the tobacco in such perfect condition.

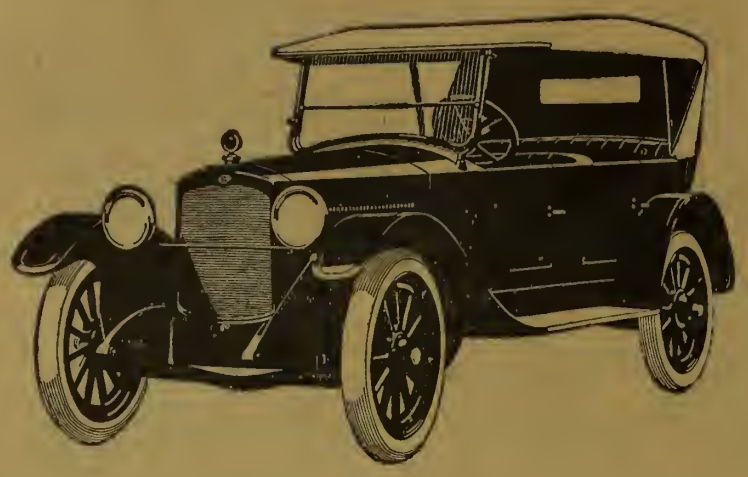
BUILT TO SERVE YOU WELL



GRANT SIX

There is a world of confidence back of our conviction that the Grant Six is the car you want. This confidence is based on the fact that it is built for your needs —built to serve you well.

Keen buyers who look below the paint, varnish and trim and want to know how the car performs, how it rides and how it stands up, are the quickest to appreciate this fact. They recognize the Grant Six as a wonderfully fine car.

The Grant Six has the smart beauty of a sport model; its lines are long, low and rangy, yet it is a true five-passenger touring car. It has plenty of room, its seats are the right depth and height for comfort and it is substantial and well built.

Its overhead valve motor is powerful, flexible and economical. It takes the car as fast as most men dare to drive.

And it is a fact that you can ride over country roads at better than ordinary speed with a Grant Six because its long springs, correct weight distribution and perfect balance keep it comfortable at speeds and on roads simply impossible for an ordinary car.

The Grant Six is easily handled, it is "light on its feet," and yet it has extraordinary strength and endurance.

But you will have to see the new Grant to really appreciate its character and ability. Go and see it now. See it before you buy any car.

'19 ...	88	91½	84½	87	89	91½
'18 ...	..	79½	79½	81	81	..

Rcts. ending Nov. 29, 130,770.

Eggs are going East in carlots from S. F. and points of production raising prices on local market.

LIVESTOCK

Western Meat Company prices are:

Cattle: Grass steers, No. 1, weighing 1,000 to 1,200 lbs., 10½@11; do, 1,200 to 1,400 lbs., 10@10½; do, second quality, 8½@9; do, thin, 6½@7½.

Bulls and stags: Good, 5@6½; fair, 4@5½; thin, 3@4½.

Cows and heifers: No. 1, 8½@9; second quality, 7@7½; common to thin, 4½@6.

Calves: Light weight, 11; medium, 10; heavy, 8@9.

Lambs: Yearlings, 10; milk, 12@12½.

Sheep: Wethers, 9@9¼; ewes, 6½@7.

Hogs: Hard, grain-fed, 100 to 150 lbs., 14¼; 150 to 225 lbs., 15; 225 to 300 lbs., 14½; 300 to 400 lbs., 13½.

POTATOES

Wholesale selling price:

Potatoes: Per 100 lbs., Rivers, fancy 2.90@3.00; choice, 2.75@2.90; Oregon Gems, 3.45@3.60; Salinas, 3.50; Sweets, lb., 3½@4.

ONIONS

Wholesale selling price:

Onions: Brown, fancy, 4.25@4.50; choice 3.75@4.00; Yellow, 3.75@4.00; Whites, 3.50; Garlic, lb., 18@20.

VEGETABLES

Wholesale selling price:

Beans: String, 15@20; Lima, 12½@15.
Carrots, per sack, 1.00@1.25.
Cauliflower, doz., 1.25@1.45.
Cabbage, doz. 40@55.
Celery, doz., 25@40.
Cucumbers: Per box, 90@1.50; hothouse, 2.25@2.50.
Eggplant, lb., 10@15.
Lettuce, cr. of 3 doz., 1.25.
Peppers, Bell, lb., 10@12½; Chili, lb., 8@10.
Peas, lb., 12½@18.
Pumpkins, per sack, 75@1.25.
Radish, 7@9 doz. bunches.
Tomatoes: Sacramento River, 1.00@1.50; L. A. cr., 1.75@2.00.
Squash: Summer, bx., 1.50@2.25; Hubbard, sk., 1.25@1.50.
Spinach, lb., 2@3.

FRESH FRUITS

Wholesale selling price:

Apples: Bellflowers, 1.75@2.25; Winter Bananas, 2.50@3.00; Newton Pippins, 2.15@2.50; Jonathans, 2.50@3.00; Spitzenburg, 2.50@3.00 ch.; fy., 3.00@3.50.
Avocados, small California, doz., 75@2.00.
Bananas, 8½@10.
Cranberries, 5.00@5.50 per standard box; barrel, 15.00@18.00.
Figs, double or single layer, 1.00@1.50 box.
Grapes: Malaga, 2.00@2.50 per box. Muscats, 2.00@2.50; Tokays, 1.25@2.50; Isabellas, 1.25@1.75 per crate.
Huckleberries, lb., 20@24.
Pears, box, 1.50@3.00.
Persimmons, box, 1.75@2.50.
Plums, 1.00@2.00.
Pineapples, doz., 4.50@5.00.
Pomegranates, 1.75@2.00.
Quinces, box, 75@1.50.
Strawberries, ch., 12.00@15.00.

HONEY

Jobbing prices: Extracted, Water White and White, 20@21 lb.; light Amber, 14@16; Amber, 13@14; Comb, 28@30 for White and Water White and 25@28 Light Amber.

HOPS

1919 contracts per lb. around 75@90.

BEANS, PEAS

Jobbing price per cental:

Beans: Small white, 6.50@6.75; large white, 6.25@6.50; cranberry, 7.50@8.00, red Mexican, 6.50@7.00; pink, 6.25@6.50; California Bayou, 9.00@9.50; blackeye, 6.00@6.50; red kidney, 12.00@13.00; Lima, 13.75@14.25; Garvanza, 9.50@10.50; Kotenashi (in bond), 5.35.

Dried Peas: California, 6.50@7.00 per cental for green, recleaned.

RICE

Prices per 100 lb. bag:

California: Fy., 10.50; ch., 10.25; flour, 6.25.

GRAIN

Wheat: The prices are based upon federal grades and standards at the terminals in San Francisco Bay and Los Angeles, and are as follows, per bushel of 60 pounds:

Hard White—	Per Bushel	Per Cental
No. 1	$2.20	$3.66 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.13	$3.63 1-3
No. 2	2.15	3.58 1-3

No. 3	2.11	3.51½
Club and Sonora—		
No. 1	$2.	$3.00
No. 2	2.13	3.55
No. 3	2.09	3.48½

The above are minimum prices.

For sacked grain add 4½ cents per bushel of 60 pounds to above prices. Deductions of three-fourths of a pound made for weight of standard grain bags. Wheat grading under No. 3 mixed or smutty wheat will be purchased according to merit.

Oats: Red feed, 3.05@3.10; black, 3.15 @3.25.

Corn: California yellow, 3.00@3.10 per cental; Egyptian, 3.50@3.60; milo maize, 3.20@3.30.

Rye: 3.30@3.40.

Barley: Spot feed, per cental, 3.40@ 3.50; brewing, 3.55@3.60.

HAY

Fancy Wheat Hay (light 5 wire bales)	24.00@26.00
No. 1 Wheat or Wheat and Oat Hay	21.00@25.00
No. 2 Wheat or Wheat and Oat Hay	20.00@22.00
Choice Tame Oat Hay	23.00@26.00
Other Tame Oat Hay	20.00@23.00
Wild Oat Hay	19.00@22.00
Barley Hay	19.00@23.00
Alfalfa Hay	21.00@26.00
Stock Hay	16.00@19.00
No. 1 Barley Straw, bale	.50@ .80

Citrus Markets

Los Angeles, December 3, 1919.

Valencias are still meeting good demand in Eastern markets, Tulare Navels not being as much in demand as growers had expected. Shortage of refrigerator cars continues but the railroads promise a larger supply for coming shipments. Butte County sent out its first Navels on November 5, fruit reported sweet and of fine quality. Thermometer last week dropped as low as 25 in some citrus districts but no damage was reported as the thermometer only remained down for a short time.

Lemons have been running to small sizes. Foreign lemons also show the same tendency. Foreigns are averaging $1.85.

Shipments

Shipment of oranges from Southern California to date since November 1, 1919: Oranges, 2,168 cars; lemons, 379; total, 2,547. To same date last season: Oranges, 128; lemons, 594; total, 722. Central California: Oranges, 1,023; lemons, 70; total, 1,093. To same date last season: Oranges, 1,383; lemons, 145; total, 1,528. Northern California: Oranges, 105; lemons, 1; total, 106. To same date last season: Oranges, 57.

NORTHERN VEGETABLE GARDEN

Continued from Page 757.

and thin a few weeks after they are well above the ground to about four inches apart. The soil should never be allowed to get dry or the hulb will quickly go to seed before it has properly matured.

Asparagus and Rhubarb

We advised getting the ground ready last month for these crops, and we can recommend the following if strong roots are procured: Asparagus palmetto, quite the earliest and best yielder we know of, which to the market grower especially means something; for the home garden, we plant Conover's Colossal, which is very tender. Plant the roots, which should be well spread in trenches, six inches below the level of bed. Plant in rows three feet apart. Rhubarb may be treated in much the same way, the best varieties being Wyatt's Victoria and Crimson Winter, the last named being very popular, hardy and prolific, producing as it does throughout the whole season. These crops need plenty of moisture.

Spinach

This crop should be more generally grown, especially the type known as New Zealand, which can be cut very frequently and is of creeping hahit. Prickly or fall spinach is also a hardy variety. Seeds may be sown at once on well manured soil. Sow in rows 12 to 16 inches apart.

Lettuce

Thin out and transplant those sown last month to five or six inches apart and keep plot well cultivated.

Peas

The early varieties of these should be showing well through the ground and need watching as the birds quickly destroy the young tender shoots. Another sowing may be made for succession of varieties mentioned last month such as Blue Bantam and Little Marvel. To discourage the birds spray or dust with lead arsenate. Choose a warm situation for this crop if you desire early peas.

Turnips and Kohl Rabi

Both these are useful crops and supply a change for the menu. It is essential that they should be quickly grown and this necessitates plenty of moisture. If they are allowed to get dry while in active growth they become woody. Best varieties for sowing now are Early Snowball and Purple Top turnip. Sow in drills 12 to 18 inches apart. The best kohl rabi, which is a turnip rooted cabbage, is Early White. Sow in drills 18 inches apart.

WALTHAM THE SCIENTIFICALLY BUILT WATCH AND THE FOREIGN BUILT WATCH

The Smallest Screw in the World

Know These Facts Before You Buy a Watch

THERE are turning operations upon metal made by Waltham machinery that are so minute, so wondrous in their delicacy, so exacting in precision, that the mind is amazed at these triumphs of American skill in watchmaking.

Imagine a machine turning out by the many thousands, screws so small that the naked human eye sees them as points of metal shining under reflected light—screws that measure 254 threads to the inch, and you can put 47,000 of them in a small thimble!

Screws that are hardened and tempered, each one polished on the top—screws that are perfect in sphericity, perfect in thread, perfect for their place in the mechanism of that ladies' Waltham watch movement, which, when completed, is actually smaller in diameter than a dime—a ten cent piece.

The screws in the foreign-made watch are made by hand. But comparing them under the magnifying glass we see the difference between these hand-made screws and the Waltham machine-made product. The foreign screw varies—the Waltham screw is standardized in size and perfection of workmanship.

No human hand could ever match the quantity and quality performance of machinery that creates such miracles as these.

This is one more of the many reasons why the world's leading horologists came to Waltham for time, and still another reason why your selection should emphatically be a Waltham.

Waltham 7½ Ligne
The movement is actually smaller than a dime in diameter
$175 to $1,000 or more depending upon the case

This story is continued in a beautiful booklet in which you will find a liberal watch education. Sent free upon request. Waltham Watch Company, Waltham, Mass.

A Wonderful Family Gift—Overland 4 With Three-Point Suspension Springs

GIVE your family a Christmas gift of "smooth roads" this year. Give them the new Overland 4 with Three-Point Suspension Springs, the greatest riding improvement since pneumatic tires. The Three-Point Springs dissipate jolts and reduce sway and vibration to a minimum. They make riding on any road smoother and more enjoyable.

With these springs Overland 4 seems to sail over bumps, cushioned from the shocks of the worst roads, with a road steadiness never before approached by a light weight car.

The Three-Point Springs are attached diagonally at the *ends* of a 130-inch Springbase giving *long* wheelbase steadiness and comfort with 100-inch wheelbase lightness, economy and driving ease.

By protecting the car from road blows they prevent excessive wear, give every part longer life and make Overland 4 very economical in up-keep.

A still further source of economy in Overland 4 is its light weight which saves in the consumption of oil and fuel.

With all these important features, Overland 4 is in addition a car of marked beauty and smartness of design.

Its equipment is carefully selected and complete from Auto-Lite Starting and Lighting System to Rain-Vision Windshield.

Ask the Overland dealer to show you this unusual car. Try its remarkable riding ease. It sets a new standard of comfort. Booklet on request.

CALIFORNIA CULTIVATOR

and LIVESTOCK and DAIRY JOURNAL

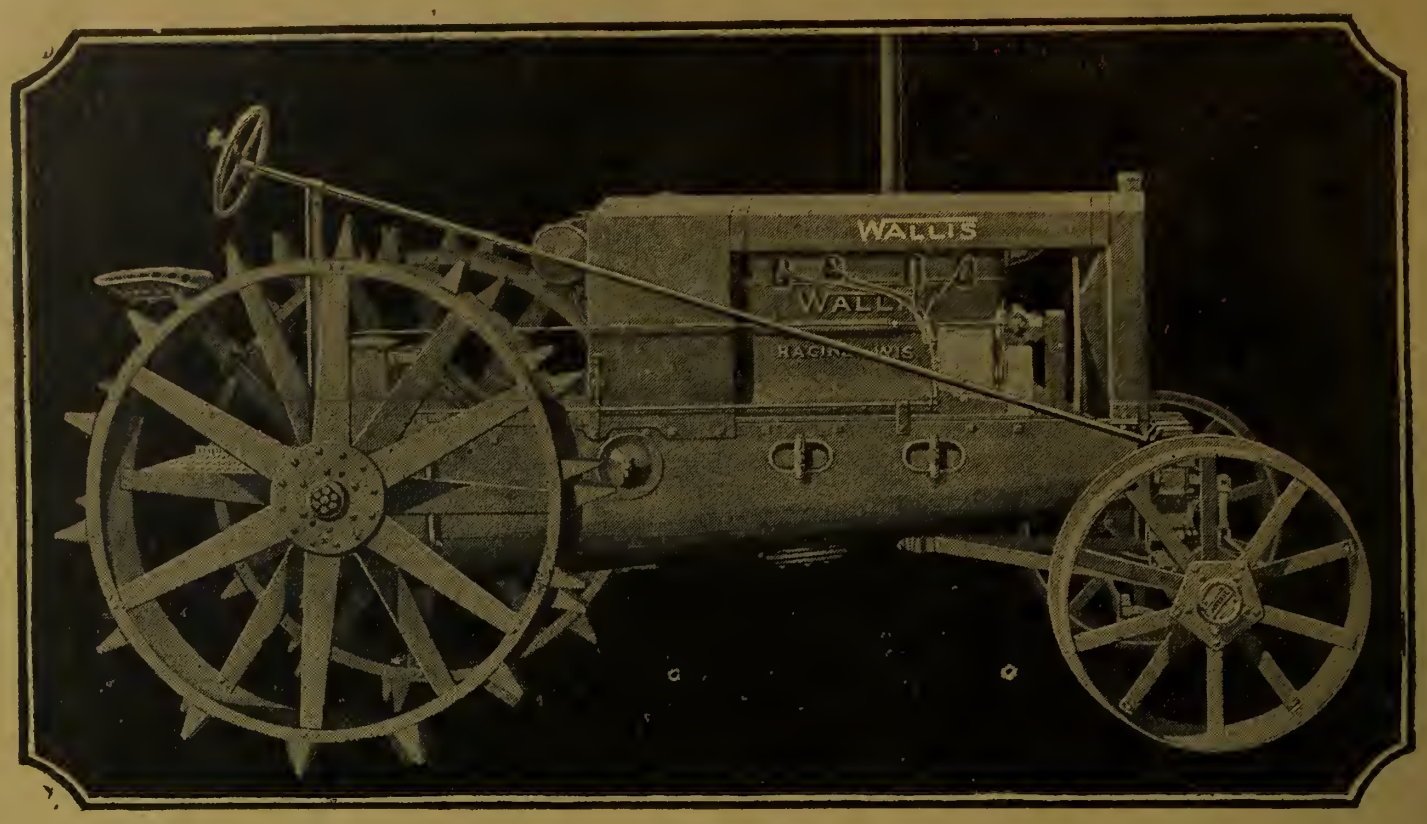
Los Angeles — An Illustrated Weekly for the Rural Home and Ranch — San Francisco

Vol. LIII — December 13, 1919 — No. 24

A Sacramento Valley Olive Orchard

When the Cultivator camera got busy in the foothills above Oroville at the time of the recent fruit growers' convention. Convention attendants are sampling the Mt. Ida mineral spring. In the background are the Mt. Ida olive groves which we were told have yielded as high as six tons of olives per acre. As to production, however, Manager Meek writes:

"This old orchard has averaged an annual production of about four and one-quarter tons of olives per acre for the past nine years. The yield is practically uniform from year to year and the fruits run to very large sizes."



Why the Wallis Endures

THE most important thing you can buy in a tractor is long life. A tractor must *stand up* to be a profitable investment. Only by serving faithfully year after year can it prove a definite economy.

In the Wallis—America's Foremost Tractor—durability is an established fact. Over 12 years of experience has proved that the Wallis principle of combining power, light weight, simplicity and durability is the one outstanding tractor achievement of the day.

In this remarkable tractor many original ideas have been proven. We now know that heavy weight and bulk are not essential to great power and long life! That tractor efficiency and long life depend largely upon the quality and finishing of the vital wearing parts—the gears—the bearings—the transmission—the combustion chambers, etc.

Wallis has *proved* that the gruelling strains a tractor must withstand demands even finer materials, finer workmanship and more accurate machining than a motor car.

In the Wallis the finest materials only are used. The most expert workmanship is employed. Machining is carried to the thousandth part of an inch. Innumerable inspections eliminate inaccuracy.

In the Wallis Valve-in-Head Motor the combustion chambers are completely machined; Wallis gears are cut and hardened steel. All gears and working parts are enclosed in a dust-proof housing and run in a constant bath of clean oil. Bearings are all oversize.

And these are some of the reasons why Wallis service is constant—why owners have utmost faith in its performance—its dependability—economy and long life.

Naturally Wallis durability, combined with its tremendous power, light weight and simplified construction, results in a new standard of economy. Everywhere the Wallis has established remarkable records in "low-cost-per-acre"—and in "low-cost-per-year-of-service." These are the true tests of tractor economy.

If you are tractor buying, the Wallis deserves your interest. Not alone because it is America's Foremost Tractor but chiefly because it offers you *power*, *durability* and *economy*, which are the factors absolutely essential to a profitable tractor investment.

The demand for Wallis Tractors is naturally great. Our capacity is taxed. It is not too early *now* to order for Spring delivery. See the Wallis dealer or write us for literature without delay.

Spraying Demonstration

By C. B. Messenger

PERHAPS one may be permitted to ask: "Why a spraying demonstration in California; have not its benefits been proven and accepted by every orchardist?" One word of two letters answers that question completely, and that word is "No."

To the one who goes to the fair or to the chamber of commerce display to gather his information as to products of the state this answer may seem to need qualification. But the best way to get the information is to go into some of the orchards, and the second best is to walk with the standardization inspector of the county horticultural commission as he makes his rounds of the market. Some of the stuff one of these inspectors gathers in was exhibited at the recent state fair—fair and beautiful to look upon as to the upper layer of Muscat grapes, but within there was a mass of mealybug and excretions.

But worse than all are the apples, full of worms and—contrary to law—repeatedly sold. And in this year 1919 there are still growers who say: "Spraying will not control the worm." To which the inspector and the up-to-date dealers reply, "O pshaw!"

At the recent county farm bureau spraying demonstration at Downey, Los Angeles County, Mr. Bissell said: "Three sprayings of apple trees; at time of first dropping of petals, another in ten days, and a third three weeks later have given me apples 100 per cent worm free." And some Downey people, apple growers, did not believe it. But we can assure them that Mr. Bissell's experience is that of many another apple and pear grower. There are sections, however, where the three sprayings may not be sufficient. But the few months between now and blossoming time should be occupied by the apple grower, at least as to his evenings or other spare time, with planning for producing fruit 100 per cent marketable. And one incentive to that should be the fact that the state law permits only three per cent of wormy fruit.

This demonstration was not intended, however, to call attention to the wormy apple question so much as to that of peach blight or shothole fungus. This is the time of year to handle those troubles. However, it is also the time of the year to call attention to the apples in market. The activity of the inspectors has largely shut this wormy stuff out from the city markets. Some growers have thought they had entire right to offer these apples rejected by the city markets, or at least by the commissioner's inspector, at their own gates or by the roadside. Hence, hundreds of roadside stands offer the lower grade apples. But the county commissioners have given warning that such wormy apples or apples infested with scales or other insects must not be offered for sale excepting to be used as by-products.

For the demonstration H. Koopman with a power machine showed how to quickly and satisfactorily spray peach trees, apricot trees, or others which might be affected with the shothole fungus or blight. In order to give greater effect to the demonstration blocks of trees were sprayed and others adjoining were left unsprayed, and the orchardist has consented to permit these trees to remain unsprayed to show any difference there may be between the two blocks.

In the evening the apple fruit growers gathered at Downey and addresses were made by Adviser Hodgson, County Commissioner Ryan and Avery S. Hoyt at the head of the standardization service of the state department of agriculture.

A Horrible Example

We wish this photograph gave more clearly the actual condition of the peach orchard as seen by the Cultivator photographer when he leaned over the barbed wire fence by the road and took this view. We will not locate it for it is not to the credit of any county or section of the state. Peaches this year commanded around five cents per pound. We did not see the fruit which came from these trees, but we venture it was not in the five cent class for there was a mass of it; nearly every tree in the orchard was broken and distorted; no pruning, no thinning, no spraying, not even the keeping down of weeds to aid nature in the production of the earth's finest fruit. Well wishers of the state are thankful that this orchard is the exception.

A Spraying Demonstration

The upper picture shows the preliminaries of the demonstration. Adviser Hodgson is making address as to the advisability, even the necessity, of protecting the trees from their enemies. Lower picture shows H. Koopman giving the practical side of the demonstration with a new spray gun. The power pump in the background is busily at work all by itself while the sprayer with one of the newly introduced spray guns is able to reach the topmost twig without the long spray rod formerly thought necessary.

Certified Seed Potatoes

By Ernest Braunton

A VISIT to the leading seed houses reveals the belief of all interested that certified seed potatoes will some day be the only kind offered for planting. But they were unanimous in saying there is no such stock to be had this year, and some were loud in their denunciation of the practices of the past. Said one prominent seedsman of Los Angeles: "Last year we received 90 sacks of so-called certified seed from a dealer in Blankville, a town in a potato growing section, for which we paid $1 a sack extra because they were certified. They were the poorest potatoes we handled that year and were at least 20 per cent scabby. The certified business thus far has been a joke and better control must be had if good results are to follow."

This firm has just received a half carload of Red Rose from the north and the senior member just qoted said none could be better, even if certified. Their great call is for White Rose, Red Rose, American Wonder, a few British Queen, Burbank and Irish Cobbler. In parting he said: "I am for certification if it really certifies, for that puts the potato business on the right track."

Another senior member of a leading house said: "Certifying is a good thing, no question about it at all, but we can get no such seed at present, and when shall we? Many inspectors will be needed to look after this work, for each field must be inspected three times each season and there is no force available for such a gigantic undertaking. The work is along the right lines but will we ever be able to get enough certified seed to meet the needs of the potato growers? I think not."

E. A. Aggeler of Aggeler & Musser stated he believed the California potato law should be changed; it differs somewhat from that of Oregon and other states. As it is now, certified seed must range from two to twelve ounces. In case of a grower who has an excess of potatoes heavier than 12 ounces it shuts his product out of certification, though he may have the best stock in the state. Mr. Aggeler would remove the maximum weight entirely. He also believes the first inspection to be unnecessary and inadvisable because it is expensive, accomplishes nothing and often works a hardship. The potatoes are inspected first before planting to note if they are pure and have been dipped. Dipping is advised by all as a safeguard, but if the seed is impure the variation of flowers will show it at the second inspection, which is made at blooming time, and if they are diseased the

Agricultural News Notes of the Pacific Coast

Northern California

A cat show will be held in San Francisco December 12-15.

Orland, Glenn County, will ship 12 carloads of oranges this season.

The Olinda, Shasta County, district reports a fine olive crop this year.

A new 700 acre dairy farm has been started near Redding, Shasta County.

An 11 acre prune orchard four years old, near Colusa, sold for $1,000 an acre.

Oroville, Butte County, has received a cargo of 80,000 silk worms from Italy.

Sacramento Valley rice has jumped to $6.30 per hundred pounds for fancy No. 1.

The Housewives League of San Francisco has placed a boycott on 17 cent bread.

The Cotati district of Sonoma County will grow 800 acres of sugar beets as an experiment.

The production of vegetables in the Sacramento-Stockton district is fully double that of 1918.

Butte County hop growers have closed contracts for the next three years' crops at 36 cents.

The Indian Valley, near Greenville, Plumas County, is becoming famous as a beef steer section.

The Butte County Exposition Association, recently organized, will perpetuate the county fairs.

Lady apples shipped from Coloma, El Dorado County, to San Francisco, brought $4.25 per pear box.

Grass Valley, Nevada County, reports cattle losses will be heavy unless relieved by immediate rains.

The 200,000 acre Pearson ranch in Colusa County has been sold for $400,000 and will continue in rice crops.

Butte County farmers are holding meetings to boost the county good roads bond election on December 16.

The first carload of dried apples from Dutch Flat, Placer County, brought $5,760 in the car at shipping point.

A tract of 8,000 acres near Williams, Colusa County, will be irrigated through building a canal six miles long.

A new highway will be built on the bank of the Sacramento River, from Sacramento to Corning, Tehama County.

Of the wine grapes sent East from the Sacramento Valley, the Alicantes were the most popular, bringing the highest prices.

Alameda, San Francisco and Santa Clara Counties will combine in the 1919 enforcement of the apple standardization law.

A community cannery is planned for Orland, Glenn County, and will be erected at once, 2,000 tons of peaches being the 1920 outlook.

Former Congressman Kent has given a beautiful tract of woodland facing on Lake Tahoe to the forest service for a public camp and playground.

Sixty thousand acres of land in the Sutter basin will be devoted to the exclusive production of vegetables for Eastern shipment. All Japanese are barred.

One of the most extensive rice growers in Colusa County says the best variety of rice is Aikuku which is two weeks earlier than the standard variety Wateribune.

Central California

Lodi is having a big tractor demonstration, December 1-13.

The Stockton city council has prohibited bees being kept in that city.

Heavy snows in Central California have put out all the mountain forest fires.

A woman at Lindsay, Tulare County, picked 93 boxes of oranges in eight hours.

Lindsay, Tulare County, shipped over 350 cars of oranges to December 1.

A cotton gin at Tulare is talked of, Tulare cotton now being ginned at Fresno.

Oakdale, Stanislaus County, will pave all the streets in the business district.

Citrus pruning and lectures by Dr. Coit will begin in Tulare County, December 15.

Six cars of hogs auctioned at Tulare last week ranged in price from $12 to $15.30.

The high price at the last hog sale at Modesto, Stanislaus County, was $14.65 per hundred.

Merced tomato growers have organized under the name Merced Growers Packing Association.

Kingsburg, Fresno County, ranchers have signed 9,000 acres in ownership asking for an irrigation district.

San Joaquin County produced 56 per cent of the corn grown in California in 1919, or 5,000 to 7,000 acres.

Pomegranates from Springville, Tulare County, sold in Eastern markets for $2.45 to $2.93 for half boxes of 35.

The Terra Bella Citrus Association of Tulare County shipped its first carload of oranges on Thanksgiving Day.

School lands totaling 1,700 acres were sold at Visalia, Tulare County, recently for an average of $15.60 an acre.

Farm bureau meetings in San Joaquin County will be as follows: Escalon, December 15; Ripon, 18; Manteca, 19; Live Oak, 22.

City Clerk Halbert of Porterville, Tulare County, announces that there are no Japanese in that city nor in the country surrounding it.

Dr. J. Eliot Coit of the University of California will hold citrus pruning demonstrations in the San Joaquin Valley this week, beginning December 15.

Ranchers in the Lynn district of San Luis Obispo are turning hogs out to eat acorns for the first time. In former years the squirrels ate them, but the 1919 poison campaign killed them all.

Following close on a completed contract for 17,000 pounds of dressed turkeys for the army, a Tulare provision company has landed a navy contract for 25,000 more of the birds, which must weigh 12 pounds or over and be young toms. On the first contract the company paid poultry ranchers 35 cents per pound for the turkeys.

Picking of cotton on the Tagus ranch, six miles north of Tulare, is about finished and from the 860 acres there will be at least 1,000 bales. This is the first big acreage of cotton to be grown in Tulare County and the ranch owners are so well pleased that they are planning to install their own gin on the ranch.

Southern California

El Centro is to have a federal postoffice building.

Perris is to have a cotton field of 400 acres next spring.

Riverside County received .14 inches of rain on November 27.

There are 19,500 milch cows in the Imperial Valley and 665 dairies.

Staple cotton sold in Blythe, Riverside County, last week for $45.50.

The usual rose tournament at Pasadena will be held on New Year's.

On November 24 nearly an inch of rain fell at Brawley, Imperial County.

An acre of seed cotton at Blythe yielded 2,800 pounds at first picking.

The first grapefruit from the Imperial Valley was shipped November 20.

A university tractor short course will be given in Riverside, February 23-28.

Idyllwild, a mountain resort in Riverside County, reports ten inches of snow.

The rain of November 26-27 brought Highland, San Bernardino County, 2.40 inches.

Fullerton and Anaheim, in Orange County, will build a joint outfall sewer to the sea.

At Smeltzer in Los Angeles County a new patent beet topper is working successfully.

Ventura County officers found a genuine Kentucky still in the mountains near Fillmore.

Yucaipa, San Bernardino County, reports the first snowstorm in 40 years on November 27.

Frank W. Walton, Alamitos, Orange County, has 121 varieties of fruits in a home orchard.

The flour mill at Olive, Orange County, has been rebuilt to a capacity of 300 barrels a day.

Riverside has dispensed with the services of a tree warden for the first time in a dozen years.

Heavy rains in late November did much damage to roads in Imperial and Coachella Valleys.

The Anaheim Orange and Lemon Association closed the season after shipments of 1,450 cars.

A carload of pure bred Jersey cattle from Kansas has arrived at the Wherrel Ranch near Riverside.

The packing house at Beaumont, Riverside County, handled 40,000 boxes of apples this season.

Riverside reports many fruit growers attending the university short course at Davis, December 8-20.

Goleta has shipped nearly 100 cars of walnuts and Carpinteria 15 cars, both towns in Santa Barbara County.

An acre of dates will be planted on the Palo Verde Rancho. Imperial Valley, conditions being considered ideal.

A beekeeping course under Prof. T. F. Hunt of the University of California is in full swing at Riverside for the full week.

The first freight train on the new San Diego and Arizona railway went out from San Diego, December 2, being 20 cars of eatables.

Dr. J. C. Whitten notified Yucaipa apple growers that splitting or cracking of Stayman Winesaps occurred on young trees only and would not continue.

The Coast and General

Chandler, Arizona, is to have a civic center.

Near Odell, Oregon, walnut trees yielded $25 worth of nuts each.

Thanksgiving turkeys at Yuma, Arizona, brought 60 cents a pound.

The Western Potato Show will be held in Denver some time in January.

Premont, Texas, is making preparations to hold a West Texas Orange Fair.

Cattle sales, for beef, totaled $200,000 in Jackson County, Oregon, during 1919.

One nine year old Winesap tree at Prosser, Washington, yielded 39 boxes of apples.

The cotton crop of the great Southwest for 1919 will have a value of $43,380,000.

The Oregon penitentiary harvested the flax crop for the farmers of Marion County.

Mexican crops, especially corn and beans, are very poor as a result of heavy rains.

Phoenix, Arizona, experienced its first snow storm in many years on November 28.

The National Wool Growers Association will meet in Salt Lake City, January 19-21.

In the northern part of Utah the recent snowfall was the heaviest ever recorded there.

Chandler, Arizona, is to have a new $60,000 cotton gin to replace the one recently burned.

Moses Lake, Washington, a wheat district formerly, shipped 250 cars of fruit this season.

The Walla Walla, Washington, district has this year harvested 10,000 tons of sugar beets.

Heavy rains interfered with orange picking in Arizona, but the first car went eastward November 23.

The West Texas Midwinter Orange Fair will be held at Premont, Jim Wells County, December 22-25.

Berry growers at Estacada, Oregon, report returns from all berries average from $800 to $1,000 an acre.

Girls' canning teams have been organized by the University of Arizona and some interesting contests held.

Fruit and potato growers from five Western states met in convention at Spokane, Washington, December 1-5.

From one nine year old tree f Winesaps 39 marketable boxes of apples were picked at Prosser, Washington.

A visitor from Egypt who has grown cotton told the Yuma Sun that Arizona and California grow better cotton than Egypt.

Four hundred cotton pickers getting three cents a pound struck near Chandler, Arizona, for higher pay, but were refused.

Unusually heavy rains during the last third of November have made fine stock feed on the Arizona-New Mexico ranges.

Farmers in Swan Valley, Oregon, are solving the irrigation problem through boring numerous wells with splendid results.

The California Packing Corporation at Dallas, Oregon, has shipped 4,000 boxes of 25 pounds each of prunes direct to England.

Now is the Time to Act on the Japanese Question

"WATCHFUL waiting" seems to be the policy in administration circles as to the alien land ownership question in California. It is possible the proper time has not yet come to handle this question as it should be handled, but if it be an evil that lands which we as a state and as a nation had hoped would be occupied by American homes to strengthen our government in time of peace and in time of war are being taken up by those who never will make of them American homes, it appeals to us that it is time to act and act effectively. Land owners approached by American men and women who wish to make American homes on their lands, are confronted by the fact that there are alien people here whose habits are such that they will pay longer rental prices for the use of the lands—$50 per acre is not uncommon—and naturally the land owners hesitate to sell their lands at reasonable producing prices when they can get these excessive rents.

The section of the state where this evil has been most pronounced is the Imperial Valley. At the recent celebration of the opening of the Arizona-California railway Governor Stephens delivered an address on the Japanese question. He said:

"In that remarkably fertile valley there is arising today, as in other parts of California, a problem that must enlist our attention. An alien race threatens, as elsewhere in our state, to supplant the American citizen. I speak of this as a question to be dealt with thoughtfully and intelligently. The proper time has not yet come for our state to undertake a solution, but when that time arrives we must be prepared to take just and effective measures, not in a spirit of mean race prejudice, but on the broader lines that will easily convince all of our fellow men beyond the Rockies of the justness of our cause and of the menace that confronts us. There are certain international aspects that must be borne in mind, and we must act with deliberation. If California's attitude is to be presented in the miserable spirit of agitation developed by political candidacies to gain popular favor, then we shall fail of a correct solution. We must have in mind the United States supreme court and the federal government, for we are a constituent and loyal part of that government. We shall proceed judiciously and effectively in this matter, and under no consideration must we be led into any precipitate and unwise course of procedure.

"I make these observations because those of you who have come from the Imperial Valley I know to be greatly interested in this problem. You see it in acute form. The people of San Diego are also interested, and I am availing myself of this opportunity to call your attention to the need of prepared and verified information and of careful study and deliberation."

We fully agree with the governor that this is a question which "must enlist our attention." We recognize the fact that "an alien race threatens to supplant the American citizen." We agree that the question must be "dealt with thoughtfully and intelligently," and when the time arrives we must "take just and effective measures, not in a spirit of mean race prejudice"; also that there may be "international aspects that must be borne in mind"; also that California's attitude should not show "a spirit of agitation developed by political candidacies." It is also a pleasure to know that "We shall proceed judiciously and effectively, and under no consideration must we be rushed into precipitate and unwise course."

More Views of Press and People

We have yet to see any marked case of race prejudice. American farmers have seen the home site value of their lands practically destroyed; producers have found Orientals' truck products in the market at a lower price than they could possibly grow them for; yet, as we say, there has been no serious manifestation of race prejudice. But these producers upon whom these losses have been forced are seriously asking: "Why are we not given relief?"

Possibly the time has not yet come, and as "watchful waiting" has been the policy in some other international matters, are we to expect that the present problem will require as long an educational campaign as these other problems? If so, the producers of California have many years facing them while waiting for relief.

Will they wait and be perfectly patient in the waiting?

Again, if the evil is here, is it not time to act? Wherein is the possibility of its becoming any easier of settlement?

> **Unless drastic measures are taken at once by both federal and state authorities to dam the onrushing flood, the fair complexion of California during the next decade will have taken on a yellow tinge which will never be erased.—McClatchy.**

There have been some local efforts which may accomplish good for particular communities. On the other hand, there is great danger of that which the administration has been so anxious to avoid, race clash. For example, in Stanislaus County we note in the Modesto Herald:

"A stringent and effective boycott of Japanese in Stanislaus County was outlined at a largely attended meeting of the board of trade Monday night in pursuance of the campaign initiated by the Turlock board of trade to stop the spread of the Orientals in this state. Steps were also taken to make the movement national in scope and to secure the aid of congress in combating the yellow peril.

"The motion, carried by unanimous vote of the board following an extended discussion of the situation, was made by G. F. Pendergraft, vice-president of the Turlock body, as follows: 'That the county board of trade go on record against Japanese immigration and convey its stand to every land owner in Stanislaus County, accompanying the resolution adopted against the Japanese with a letter giving statistics on the situation both here and elsewhere.'

"Secretary George T. McCabe of the county board was also instructed to communicate with the local posts of the American Legion and the Veterans of Foreign Wars to enlist their energetic support in combating the Japs. It was argued that inasmuch as these bodies were national in scope they would be effective in securing federal legislation if they acted on the question.

"J. V. Baker, president of the Turlock board, quoted figures showing that out of 6,000 acres in cantaloupes in the Turlock district this year 3,150 acres were controlled by Japanese. He also declared that the big percentage of California melons and Oregon apples were in the hands of Japanese.

"'I'm not condemning the Japs as much as the white man who leases and sells to them,' said Baker."

Entering the Poultry Business

Heretofore the dairy, poultry and livestock industries have been entered upon very slightly by Oriental aliens. Now comes from Sonoma County information that the poultry business is being taken up by them. The Santa Rosa Republican reports a farm bureau meeting as follows:

"Last Saturday the Sonoma County farm bureau held an all day meeting at Farm Advisor Merrill's office in the court house, Santa Rosa. Sheridan W. Baker presided at the morning meeting and John Denman at the afternoon session.

"It was reported that Sonoma County was threatened with a Japanese problem. Recently Japs have been coming into the county in increasing numbers and some of them are going into the chicken business. It has been found that more than 20 of the little brown men have secured property in the Petaluma section and some of them have gone into the chicken business on a large scale. Several of the members spoke on the subject and it was declared that the Japanese threatened to prove a menace. Should they get a hold in any one section of the county it meant that the white residents of that locality would find property values depreciated to such a great extent that soon none but Japs would live there and eventually it would be found that the white residents would have to dispose of their property to them. The farm bureau will discuss this matter more fully at a later date."

Mayor Reynolds of Chico recently remarked at the time of welcoming delegates to the fruit growers' convention: "I love you, California; my heart and soul are with this grand old state," but when women are imported to this country via the picture method and their offspring are deeded land, it is next to a crime.

Japanization of America

Commenting upon an eulogy of the Japanese race made at the recent state fruit growers' convention, the Chico Enterprise says:

"It is tough to admit that we must arrest the Japanization of America because of the virtues of the Japanese. But that's about the size of it. Perhaps a more accurate way to put it is that it is imperatively necessary because of the curious mixture of virtues with moral standards that are different from ours and of characteristics which if unrestricted threaten to absorb and dominate us."

It is most unfortunate that the friends of the Japanese and those who are anxious to prevent discussion and education in the matter of the menace insist on calling this discussion an expression of race prejudice.

As to whether the time for action has arrived, here are a few facts appearing in the daily press which raise the question—if greater provocation is required—how much will it take?

"According to information furnished by the Japanese Agricultural Association and the Japanese consulates to the state board of agriculture, the total Japanese population in continental United States in 1918 was 94,370, of whom 89,191 are in the consular districts of San Francisco, Los Angeles, Portland and Seattle.

"The Japanese estimate of their numbers in this state is 55,095, which is generally deemed to be far below the correct estimate. The same authority is responsible for placing the number of Japanese farmers in California at 32,530. The Orientals own 649 farms, comprising 29,000 acres, and control, by leasing or otherwise, 349 800 acres.

"The total value of agricultural products raised by Japanese in 1917, according to the Japanese estimate, was $41,162,000, which, divided among the Japanese agricultural population, would give an average income of $1,260.

"At the recent convention of fruit growers in Chico the statement was made that the Japanese already control one-third of the rice crop, the total value of which this season is estimated ta $21,000.000. The Japanese figures for 1917 estimate the acreage in rice controlled by them at 16,500 and the crop value at $910,000."

Writing as to the necessity for early action, Ivan H. Parke, assemblyman from the Auburn district, said:

"Japanese have colonized more than 1,500 acres in the heart of the fruit belt in Placer County and have secured four additional tracts of land during the past four weeks. I believe that the Japanese menace is the gravest economic question that today confronts our state and nation. Let us work to preserve our republic as a 'White Man's country'."

Commenting on the sale of a piece of real estate to a Japanese minor child in San Benito County, the San Juan Mission News says (this land had been formerly occupied by Americans with their families):

"Thus, two families within the last few days have been driven out to make room for non-assimilating citizens. These are only two instances, but there are many more throughout the district. In view of tbis condition, is it not about time that the people become aroused and insist on some legislation that will prevent this outrage upon highly respected American citizens? This condition is not a theory, but cold, stubborn fact. The school census being taken in this district shows that within a year or two the number of Jap children in the San Juan grammar school will equal, if not outnumber, the white children. Just think of it seriously for a moment! Are we so near actual domination by this alien race? Unless there is a stop put to this subterfuge of obtaining possession of our best lands many of us will live to see the day when few of the white race, except those who are reaping profits from land leases, will find room in which to live in this district. And this is no idle dream, mark you."

One reason for urgency in treating this question is shown by the following from the news columns of the Sacramento Bee:

Assemblywoman Elizabeth Hughes

"During the past few days the office of vital statistics of the state board of health has been deluged with letters from Japanese associations asking for certified copies of birth records. As high as 14 of these certificates have been requested by one organization.

"While it is not unusual for the department to receive scattering applications of this kind, activity during the present week has increased to such an extent that it has become extraordinary. The mail of the past two days is said to have brought in a flood of these letters.

"While it is possible that the parents of Japanese children born in America entertain some fear that the official records may at some time be destroyed, and that with copies of the certificates they would be in a better position to defend the citizenship of their offspring, the present movement appears to have some other object.

"At any rate, it is interesting, if not significant, to note that the flood of applications started about the same time the board of health began the preparation of data to be used by the board of control in a report to Governor William D. Stephens on the Japanese problem in California.

"The report being prepared by the health authorities will deal largely with the relative birth and mortality rate of the Japanese."

In Tulare County

"California must either take decided action without further delay, or 20 years from now our laws will be

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

A scene full of life is shown on this week's cover. More, its background is made up of an exhibit of one of California's great industries. It took years to educate people to eat California ripe olives. They are now eating them and liking them, and thousands of acres of California foothills give just such scenes as this one which was taken in Butte County. Best of all, it is producing large tonnage "and the fruits run to very large sizes." Let us produce more of these large sizes which run into money.

IT RAINED

Our "Dry" editorial was hardly written last week when it began to rain, and it was an exceptionally fine rain. From the extreme north to the south there was a fine precipitation which was needed to aid crops to recover from the effects of the drying winds which swept over almost the entire state. Annual crops in the north suffered and in the south some injury was done to citrus trees. And some fruit was blown off and more affected by the electrical or possibly the drying condition of the atmosphere. The hills are already showing a coating of green. Now if we may have a continuation of these perfect days until Christmas has come and gone and then be given some glorious soaking rains it will prove one of California's greatest years.

PRESIDENT U. C.

Dr. David P. Barrows has been chosen president of the University of California. Dr. Barrows is almost a life long Californian, being a graduate of Pomona College. For years he has been connected with U. C., has been at the head of educational work in the Philippines and during the war rendered valuable service to the government in France.

Congratulations are due to U. C. and to Dr. Barrows.

BRINGING THE BEST

Reference to other columns of this issue will disclose the news that a number of California breeders are in the East selecting breeding material of high order for the purpose of strengthening their herds aud flocks. Such news is welcome news. From the standpoint of the breeding business this state is woefully understocked. What is needed is to develop our own sources of supply so that the long ship, the heavy freight and express charges can be overcome and the problem of acclimatization obviated.

These pioneers deserve and should be given the active support of buyers.

FROST FIGHTING

The best oranges on earth are those produced nearest the danger line as to frost injury, and it has been characteristic of citrus growers that they have crowded as close to this line as possible. Hence there are abnormal years when serious injury is visited upon the groves, as was the case in 1913. This compels frost protection. Frost protection has become a science and has been made so effective that the citrus grower is assured of success if he will but fit for it.

One section in which there has been most organized and efficient work is that of Pomona, Los Angeles County, but owing to the damage caused by the smudge of primitive frost fighting appliances the city council passed ordinances ordering cessation of use of the smudge pots. This proved embarrassing and the growers took the matter to the courts and have forced an agreement in effect that the use of the old time smudgers is to be discontinued, but the improved orchard heaters which give almost perfect combustion are to be permitted.

CITRUS FRUITS

There was some chilly weather during the past two weeks—worse, there was a wind in some of the citrus sections responsible for scarring and seriously injuring much fruit. Perhaps we should say "little" fruit for the principal citrus sections, it is estimated, have suffered a loss not exceeding two or three per cent. However, we were in one orchard a few days since in which pruners were at work who thought the loss might reach 35 or 40 per cent, while alongside this orchard another of about the same age showed hardly any damage, but, to be liberal, say the loss might reach five per cent. Why the difference? The one suffering greatest injury had been seriously affected by red spider which had weakened the tree and lowered the resisting power of the fruit. In addition, a heavy fumigation for scale had been given only a few days preceding the storm. Fumigation can hardly be dispensed with because of weather conditions which may possibly come once or twice in a lifetime, but red spider control is possible every year, and it is indeed a rich man who can afford to buy irrigation water and fertilizer to feed red spider.

Give trees best of care and they will be in position to resist these abnormal weather conditions.

POINTING THE WAY

If additional evidence is needed in support of the contention that California is destined to become one of the great breeding grounds of America we submit the record made by California bred and raised livestock at the recent International Livestock Exposition.

The International being the greatest show of its kind in the world, it goes without saying that only the best of the different breeds find their way there and of the many only a few "are chosen." It is better to lose at such a show than to win at many others, and to win or to be among the winners represents the highest possible honor.

In 1916, 1918 and again in 1919 California steers demonstrated that California is capable of producing the equal of any state. The same was proven as regards sheep and swine, and this year the winning of the Shorthorn grand championship by a California bred and raised heifer points the way to what the future will hold if the California livestock interests but make the most of their opportunities.

With a market for all possible breeding stock of the right stamp; with conditions that cannot be excelled and scarcely equaled; with knowledge of what can be accomplished with all kinds of livestock and with the eyes of the livestock world toward this state, it but remains for our established breeders and those about to begin the business of producing better livestock to approach the future with confidence guided by a sane conception of the responsibilities of a breeder.

Our congratulations to those resonsible for carrying the fame of California to the East.

AMERICA OR ANARCHY?

There seems to be no law yet enacted which enables the department of justice to properly deal with the disloyalty which is rampant. Lawmakers never contemplated a condition which anarchists, Bolshevists and the disgruntled generally have exhibited the world round during the past 12 months. There have been many American lives sacrificed because of disloyal utterances in season and out of season. The department of justice now wishes opportunity to protect our government and asks the enactment of an effective law. A bill has been introduced which is known as the Davey Sedition Bill, H. R. 10650. The gist of the bill is given in its first two paragraphs, as follows:

"That aliens who are anarchists; aliens who believe in or advocate the overthrow by force or violence of the government of the United States or of all forms of law; aliens who disbelieve in or are opposed to all organized government; aliens who advocate or teach the assassination of public officials; aliens who advocate or teach the unlawful destruction of property; aliens who are members of or affiliated with any organization that entertains a belief in, teaches or advocates the overthrow by force or violence of the government of the United States or of all forms of law, or that entertains or teaches disbelief in or opposition to all organized government, or that advocates the duty, necessity or propriety of the unlawful assaulting or killing of any officer or officers, either of specific individuals or of officers generally, of the government of the United States, or of any other organized government, because of his or their official character, or that advocates or teaches the unlawful destruction of property shall be excluded from admission into the United States.

"That any alien who, at any time after entering the United States, is found to have been at the time of entry, or to have become thereafter a member of any one of the classes of aliens enumerated in Section 1 of this act, shall, uopn the warrant of the secretary of labor, be taken into custody and deported in the manner provided in the Immigration Act of February 5, 1917. The provisions of this section shall be applicable to the classes of aliens mentioned in this act irrespective of the time of their entry into the United States."

Other sections of the law provide for punishment of those who would promote sedition and even provide for denaturalization and subsequent deportation.

Support it; it's all-American.

CAR WINDOW NOTES

Regarding California's rivers: It is indeed interesting to name them as one passes up the state. Just out of Bakersfield we cross the Kern, then the Kings. After we pass Fresno there is the San Joaquin, the Mariposa, then the Merced, hardly as beautiful as in the Yosemite, but still a clear beautiful stream; then the Tuolumne and the Stanislaus, aud after passing Stockton the Calaveras and Mokelumne; going out of Sacramento and while still in the city limits, the American, at the headwaters of which gold was first discovered. Then comes the Yuba, the Honecut, Feather and Sacramento. These are not all, but they give an idea of the wonderful wealth which the Sierra Nevada give to California.

* * *

And speaking of rivers, we are reminded of another which flows down the sides of the highest mountain in the United States, where it is gathered in by the great city of the southland and carried 250 miles through mountains and over valleys and out of a tunnel near San Fernando, where it flows over the riffles in plain sight of the train. And there are so few people who know of this and are watching out of the windows for a view of this wonderful wealth of water.

* * *

When riding through the state I have often wished to be a good marksman and have the privilege of taking a shot at some of the ground squirrels who sit at the entrances of their holes as if defying the passerby. This time I looked for the squirrels. Not one did I see in a 1500 mile trip. The county horticultural commissioners and Mr. Jacobsen of the rodent control have a lot of deaths to account for.

* * *

Occasionally a highway appears at the window, built along common sense lines. To one side of the center is the regular concrete foundation, perfect pavement for autos; on the other is an excellent track for dirt road for the use of horses, tractors which have lugs on the wheels, or vehicles which would destroy or injure the concrete foundation. At one place we saw a tractioneer laying plank over a pavement in order to cross the pavement without injury. Common sense, more, a public benefaction.

* * *

Funny, but it's true that when we are passing over a strip of poor land we see poor barns, poor houses, poor old horses and implements, poor farming. If we have been stung in the choosing of land let's build it up and be able to build better and bigger Enriching soil is a matter of building

* * *

The newsboy is something of a wag He just passed through selling "double jointed California peanuts guaranteed seedless and boneless." That's one trouble in this world there are too many seedless peanuts and not enough boneless heads.

Upon the highways of the world, so written that he who rides may read, the clean, sharp characters of the Goodyear All-Weather Tread have printed this impressive story: More people ride on Goodyear Tires than on any other kind
This is an actual photograph of the impression left on a clay road by the Goodyear All-Weather Tread

GOODYEAR

TEAGUE'S
QUALITY
Citrus Trees

Grow and Produce
Large Crops of
High Grade Fruit.

Because they are properly grown from the seed to the marketable tree.

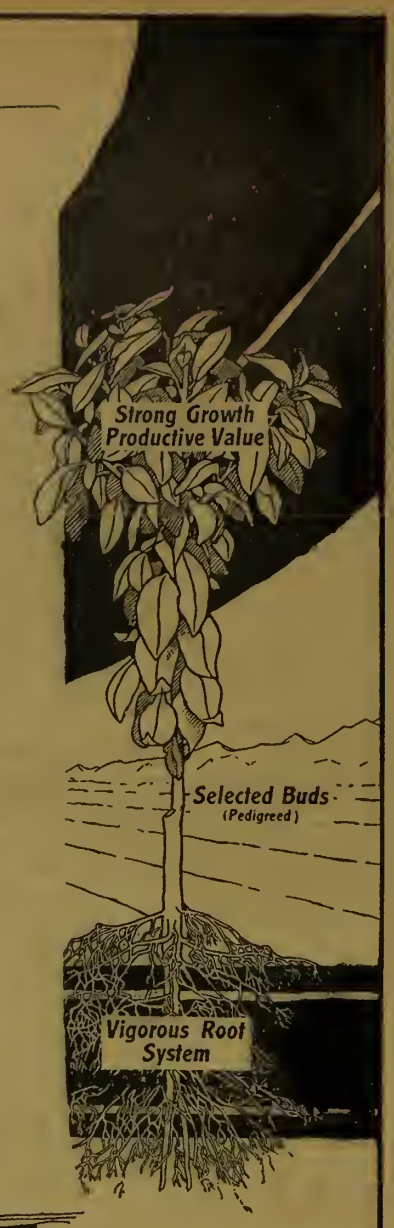
We use only the Choicest Seedlings properly planted on suitable soil and budded with Selected Buds from the best producing Groves.

Every care is used in digging and packing so as to insure the best results to the planter.

And then our 30 years' experience in Nursery and Orchard work enables us to give you valuable instructions and advice on the planting and care of your Orchard. This service is always at the command of Purchasers of Teague Trees.

On this basis we earnestly solicit your business.

The R. M. Teague
Citrus Nurseries
Box A. San Dimas, Calif.
Founded 1889



The Famous Hardie Junior is a Real Power Sprayer

It has sufficient capacity for two lines of hose. It has plenty of power for high pressure effective spraying. It is little in first cost, weight, and upkeep. It is big in real value, engine power, pump capacity and ability to do successful spraying. We believe this is the greatest small power sprayer ever manufactured, and placed on the market with phenomenal success in every fruit section in United States and vouched by thousands who own the Famous Hardie Junior. Equipped with 1½ horse-power engine, Magneto ignition, 150-gallon tank with mechanical agitator, capacity of four gallons per minute with a steady working pressure of 200 pounds, and two 25-foot of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

All for $340.00. *Delivered anywhere in this state*

If truck is not needed, deduct $55.00.

These prices are subject to change without notice. The wise buyer will place his order now.

This low price is made possible by big production.

If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer.

The HARDIE ORCHARD GUN is $12.00, none better. Every one is guaranteed to give satisfaction to the user, or his money refunded.

The Hardie Spray Hose is the safest hose to buy.

Northern Citrus Methods

SPEAKING regarding orange packing and maturity standards before the recent fruit growers convention, in the session held at Oroville, F. J. Mason, an independent shipper, gave methods followed in the northern groves. From his address we quote:

Much injury can be done by careless picking. Fruit picked with long stems will puncture other oranges throughout the entire handling, first when dropped into the picking sack, then when unloaded from sack to lug box, then again when rolled into the orange grader at the packing house, and again when wrapped and packed in the shipping box. You can imagine the great danger caused by the many opportunities for puncturing the fruit and consequent decay by the time it reaches the Eastern market.

Another element of danger is the too close clipping of oranges from the tree, which causes an abrasion of the skin. A wound of this kind brings on decay and mould very quickly. So you will readily see that the picking of fruit is a very important feature. It has always been a slogan in the fruit business that when fruit is properly picked, the packers cannot go very far wrong.

In packing oranges in Butte County we make three grades—Fancy, Choice, and Standard. The Fancy grade consists of finely textured, unscarred fruit; the Choice, of fruit showing scars and marks and of coarser and thicker skin; the Standard of badly scarred and rough-skinned oranges. The first two grades will cover practically all of our Butte County fruit as the percentage of Standard is very small, except during seasons when severe storms prevail and fruit is badly storm whipped.

Many people have mistaken ideas about grades in oranges, thinking the size has to do with the grade, and we often meet people who have the impression that a large orange is a Fancy orange because of its size.

I believe this is true in the grading of olives, and the larger they grow the more valuable they are. This is not so with oranges—in fact, it is often a detriment, for if too many large sizes are shipped in a carload lot they are subject to a discount in price.

Some years when through climatic conditions oranges run in excess to large sizes, the whole seasonal average is affected for the simple reason that the man who buys to sell to the consumer is unable to get as much money out of a box of large sizes as he can get out of a box of medium sized fruit. It means a difference of six or eight dozen oranges in a box between large and medium sizes, hence it is plainly to be seen that the trade does not want an excess of large sized fruit.

Now as to standardization: During the past few years great strides have been made in quality and pack. Our state commission, headed by George H. Hecke, is to be congratulated on results obtained by standardization. It is true that some of us have thought at times there was a little too much technicality in the rulings, and some practical fruit men may still think so; but we sincerely believe that from a standpoint of general results the whole thing has been a wonderful success and is making for better quality, grades and packs.

No doubt everybody in this room is familiar with the many controversies over what is known as the eight to one chemical standard for oranges. We do not believe in this method of determining the fitness of an orange for market; we believe the natural color should govern the standard of maturity, and when an orange is substantially colored on the tree it is ready for shipment. It is self evident that natural tree colored fruit is far more desirable and palatable than fruit picked when green outside and then artificially colored by heat, even if it does conform to the chemical test. However, the latest rulings, as adopted by our last legislature, modify the old ruling somewhat. Oranges reaching the chemical analysis of eight parts of solids to one of acid must show at least 25 per cent natural color before they can be sweated to color, while oranges not reaching the eight to one test may be picked when showing 70 per cent color on the tree.

This, in our judgment, is something of a victory for the natural colored fruit, and in a mild way condemns artificial heat for color.

And this is as it should be. The Butte County oranges of natural color will always give satisfaction. Never in our recollection has there been complaint on oranges from this district which have been shipped without sweating. Good live well colored fruit without artificial heat and regardless of any chemical test will always be in favor, and it is on these lines that Butte County has built up a splendid trade.

Oranges beated to color carry a dead and pale appearance, while oranges allowed to color naturally have that deep orange color which pleases the consumer.

Our state commission has done great things in standardization of deciduous fruits, which has been no small task considering the many varieties and different methods required.

There are fewer rejections, fewer complaints, and a greater demand at satisfactory prices. The dealer now can feel reasonably safe in ordering his supplies direct from California, knowing that fruit bought from reliable shippers will be properly packed and loaded.

In all these matters the producer, the shipper, and the state authorities should cooperate, and each and every one of us work together for the common good.

Speaking of cooperation, the interests I represent believe in cooperation—cooperation with the grower and cooperation with the consumer. We strive to assist the producer in every possible way, to help him produce good fruit, to give him the benefit of our judgment in packing and marketing, based on many years' experience, to place his produce in the best markets for that particular product and to keep faith with the consumer by giving him legitimate pack and quality for his money.

TEAGUE NURSERIES EXPAND

The R. M. Teague Citrus Nurseries of San Dimas are both expanding and absorbing. The entire stock of subtropical fruit trees and plants formerly belonging to the West India Gardens was purchased and moved to San Dimas, together with the houses, and the Altadena establishment passes out of existence. All the young stock of tropicals will be planted on the new 90 acre tract recently purchased by Mr. Teague in the La Habra Valley, about six miles east of Whittier. A large stock of citrus trees will also be planted on the new grounds, but avocados, feijoas, sapotes and guavas, together with all the long list of fruits that go with them, will be grown. At San Dimas fields are hundreds of thousands of young citrus trees under the highest culture and on stakes could be seen the registered numbers of the trees from which the buds were taken.

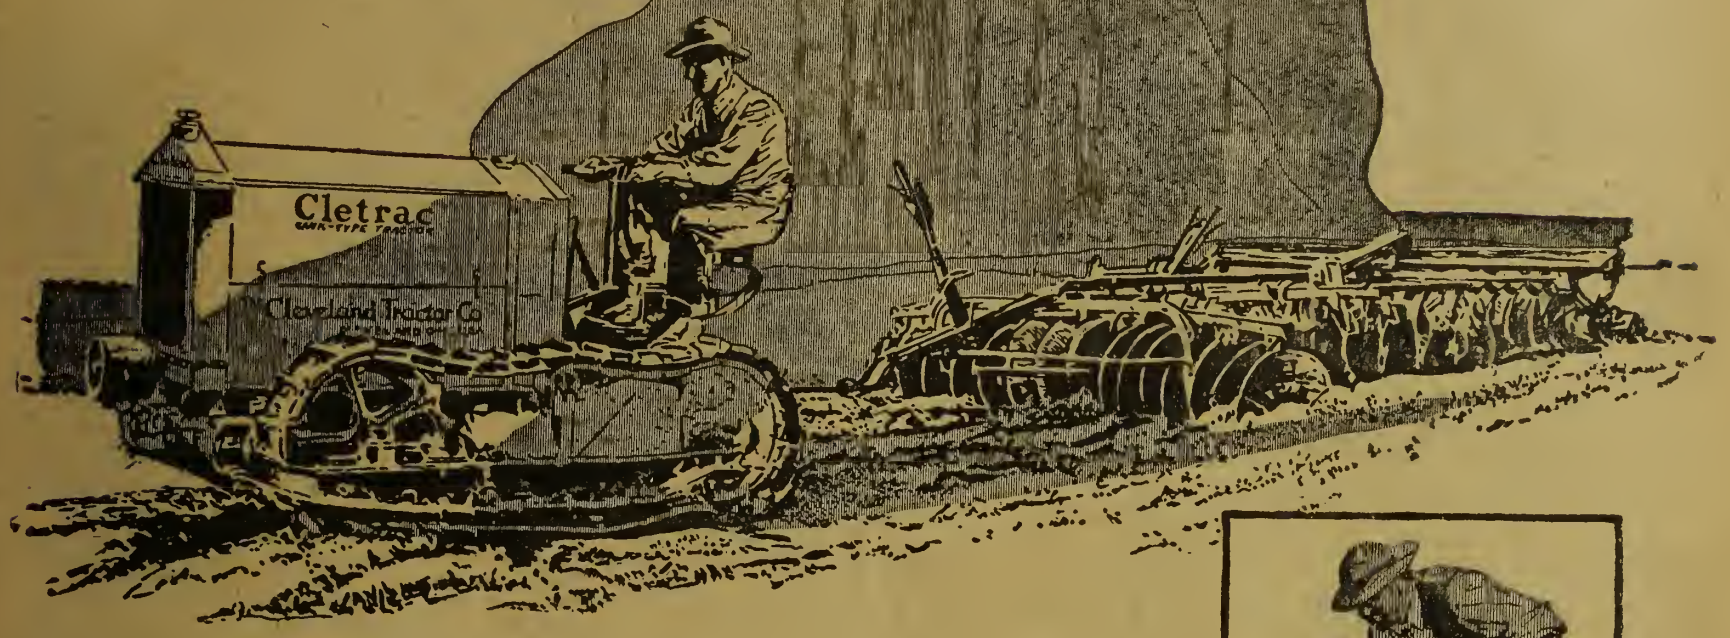
THE FAMILY TREE

In his last week's talk at Ontario A. D. Shamel made a strong plea for recording the crop production of each tree and advised painting a number on each with white lead. He said it is amusing, as well as pathetic, to see how little the average orchardist knowns about his best trees. In visiting orchards in quest of the best performers, the owner would state: "We have one tree (or more) from which we gather oranges for family use. They are superior to all others. Come right this way. Here it is! No, this is the one. No. Well, I am not sure but it is this one; it is one of this group close by." Very few are able positively to identify these family trees. How easy recognition would be if each had a number. How easy to find the drones if the crop of each tree was counted and recorded.

Cletrac

TANK-TYPE TRACTOR

(Formerly known as the Cleveland Tractor)



It runs on tracks as a wheelbarrow runs on a plank

TRY to push a loaded wheelbarrow through soft plowed ground. You have to exert every ounce of your strength. The wheel sinks in deeper and deeper and you finally get "stuck" altogether and have to take off your load.

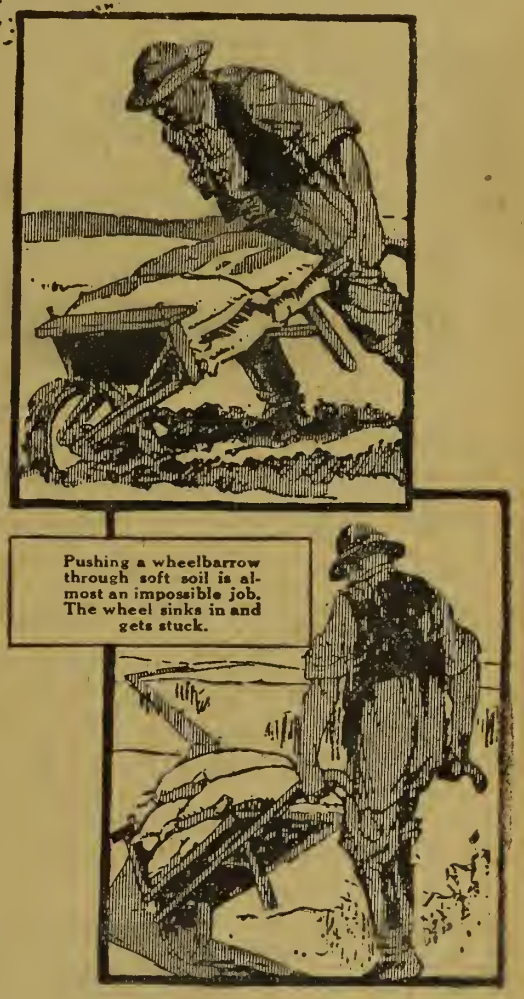
But lay a plank over the *same* soft ground and you can roll the *same* wheelbarrow over it with the *same* load—*but with only a fraction of the effort.*

It was the plank that made the difference. Its broad flat surface *distributed* the weight of the load so that there was very little pressure at any one point.

And right there you have the principle back of the Cletrac Tank-Type Tractor. It runs on broad flat tracks in much the same way as the wheelbarrow runs on the plank. No power is wasted. You can pull a bigger load. Fuel and oil go further. And *more* work can be done in *less* time—at *less* cost.

Because you can work so efficiently on soft soil with the Cletrac *you can go through with the entire preparation of the seed bed*—a most unusual thing for a tractor to do. The Cletrac doesn't sink in and doesn't leave two hard trails of packed down soil behind it.

Order your Cletrac now. There is plenty of work for the Cletrac to do, like getting out wood, hauling logs, grinding feed, breaking roads, hauling manure, etc., during the winter months and when Spring work comes along you will be fully acquainted with your Cletrac.



Lay a track of boards over the ground and you can roll along easily enough. It is this principle that has made the Cletrac Tank-Type Tractor so marvelously successful. It doesn't *push through* the soil; it *rides on top on its own tracks.*

Tractor Book Free

We have an interesting 32-page book entitled "Selecting Your Tractor" that will be sent free upon request. It discusses tractor farming problems on a "brass tack" basis. Write for your copy today.

The Cleveland Tractor Co.

19007 Euclid Avenue Cleveland, Ohio

Oak Root Fungus Disease or Toadstool Root Rot

ONE of the most widespread and injurious fungi in the Pacific Coast region is oak root, or Armlllaria mellea, more recently called Armillaria putrida. Thls fungus is one which infects various kinds of roots or wood lying in the soil, causing wood rot. It attacks living trees or shruhs and causes their death. Affected trees or sbrubs usually show a certain amount of distress hefore they suddenly collapse and die durlng dry weather. Sometimes a tree dies suddenly without previous symptoms, and sometimes an attacked tree lingers along making a certain amount of recovery hut finally succumbs. From the behavior of such trees it would not be possible to distlnguish between this trouble and certain others, such as gopher injury, root sour sap, etc.

In orchards the fungus usually develops from a center, spreading outward from one tree to another year after year, so that in time extensive areas become killed out. Trees replanted within the affected area ordlnarlly dle wlthin a few years. This behavior is highly characteristic but some instances have been found where local water injury causes the same phenomena. Trees affected with oak fungus, when examined at the root, show characteristic symptoms.

White Mycelium

When a root attacked by oak fungus disease is examined hy cutting into the bark, the whole suhstance ls found invaded hy white or creamy mycelium in the form of large, conspicuous plaques, and the normal consistency is entirely changed, being first watery and then soft and decaying. Tbere is often associated with this a gelatinous or gummy material, and in many of the affected trees the margin of the invaded bark gums copiously. The odor of this decayed bark is not sour or putrid but has a sharp, rather agreeable, mushroom smell. This white mycelium is an invariahle sign of the disease. Where a tree is killed by some other agent, different kinds of white fungi may invade the bark and form felty mycelium so that sometimes considerahle skill is required to recognize the Armillaria mycelium with certainty. The white mycelium of Armlllaria is never found in nature on the surface of the bark hut always buried, since lf the mycelium comes in contact with the air while it is alive it covers itself with a brown coat or shell.

Wood Decay

The white mycelium also penetrates copiously into the sound wood. At the outer limits of penetration the wood is slightly darker than normal, but the fungus rapidly causes the wood to become decayed with a uniform white rotting. Rapidly decaying wood or bark when exposed in the dark shows phosphorescence. Unlike other wood rotting fungi, Armillaria mycelium is killed by thorough drying out.

Susceptible Plants

Nearly all trees and shrubs may be attacked. The Armillaria, however, is a rather slow acting fungus so that annual or short lived crops are not usually seriously injured; also plants with fine, slender roots are not much affected owing to the habit of the fungus of developing in roots of some thickness. It has been reported as attacking rhubarb and sometimes tbe rhlzomorphs penetrate potatoes, causing rot, hut ordinarily in California such plants are not injured. A few trees have seemed to be highly resistant and some practically immune. French pear is apparently lmmunc while the trees are growing healthily. Black walnut and figs are considered highly resistant. Apples are certainly more resistant than stone fruits and Myrobolan plum is apparently somewhat more resistant than peach or almond.

Control

Affected plants may be saved if the soil is removed from the roots and the diseased parts removed, treating the wounds as ln other cases of tree surgery with some disinfectant such as creosote or Bordeaux paste or corrosive sublimate (1-1,000), followed with asphalt. Usually the disease is not discovered until it is too late to save the tree. In California the fungus generally works so deeply that the lower roots are practically all destroyed hefore the top shows evidence of trouble. Where the rhizomorphs come from a neighboring stump it may he entirely practical to remove them from the crown of the trec and scrape off the slight infcction which has taken place in thc outer bark. Evldently the fungus does not in any way poison the part of the tree which is not invaded and it hecomes merely a qucstion of saving sufficient roots to support the tree.

Preventing Spread

It has sometimes been recommcndcd to pull out or dig out two rows of trees surrounding tbe margin of the spot, and this has been reported to be successful in a number of cases. However, the sacrifice is often great. The infected soil may be separated from the uninfected about it by means of a dltch. Where shallow rooted trees like citrus are involved this ls probably entlrely practicahle, especially in the shallower soils. It ls doubtful whether it will he feasible to make a dltch more than about four feet in depth so tbat for very deeply rooted trees in deep soils the ditch may not be completely effective but it is well worth trying.

The greatest pains should be taken to examine all roots removed in the digging, and if any are found affected with Armillaria, the location of the ditch must be changed so that these may be included. All the diseased roots within the area must be surrounded by the ditch. The cost in bigh priced orchards is not believed to be prohibitive. However, once opening the ditch will not be sufficient since it will rarely be found satisfactory to leave the ditch open durlng the summer, and the digging would need to be repeated probably about every two years. This comes about because new roots will cross the ditch and mingle with the diseased material on the other slde. Various experiments have been made in placing barriers of building paper or roofing paper, boards or concrete in the ditch before refilling. These experiments are still under observation. The lighter types of building paper have been found to be worthless for this purpose since plant roots pass through them readily. No recommendation as yet can he positively made concerning the use of barriers.

It is highly desirahle that diseased areas should be cultivated separately from the rest of the orchard since the fungus is probably spread througb pieces of diseased roots which are carried along by the cultivating instruments and dropped near healthy trees. In small areas this may be very inconvenient, and it will prohahly be possible to take precautions which will be adequate hy making sure that no root pieces are clinging to the implement on passing the edge of the spot.

Utilizing Infested Areas

Reslstant trees such as French pears and probably figs or hlack walnuts may be freely planted where desired. An ideal arrangement would be to sow down the Armillarla spot to alfalfa or the spot might he cultlvated as a vegetable garden. In some places the Armillaria spots have heen cleared off, taking some trees around the edges and utilizing for drying grounds. Spots lnfccted with Armillaria should not be used for growing nursery stock owing to the chance of establishing the disease in land not now affected.

THE POOR FISH!

The bureau of fisheries reports the rescue of 68,000,000 fish on the Upper Mississippl River, double the number rescued last ycar, and this figure will also be doubled if favorable present conditions prevail to the cnd of the season, or until the streams are frozen

PLANT QUARANTINE NO. 37

Some readers of the Cultivator may wish to import novelties or propagating stock, which the federal government encourages and fosters. It is finished stock, ready for the planter, that is prohibited.

A "novelty" is defined as follows: "A plant variety, strain, type, or form, either recognized by the trade as a novelty and listed or described as such in catalogues, trade journals or other publications or duly and properly certificated by the originator or introducer."

"Necessary propagating stock" is defined as follows: "Stock of old or standard varieties not available in this country and imported for the multiplication of the plants in question as a nursery or florist enterprise as distinguished from importations for immediate or ultimate sale of the stocks actually imported."

It is necessary to make application to Federal Horticultural Board, United States Department of Agriculture, Washington, D. C., and the necessary blanks will be sent, upon which must be entered quantity and designation of stocks imported, name and address of the exporter and grower, country and locality where grown and the name and address of person or persons to whom the plants are to be forwarded after inspection and release by the department of agriculture. The regulations further provide that a bond is required that the conditions set forth by the federal horticultural board shall be fulfilled. Stock imported under permit as above to be planted and grown so as to maintain its identity and the board shall have the privilege of inspecting stock at any time and destroying it if necessary. The whole matter is made as plain and easy for the importer as possible, with no autocratic restrictions.

ZANTE CURRANT VARIETIES CAUSE CONFUSION

There are two varieties of the so-called Zante currants, and prospective planters should carefully investigate the stock they are purchasing to avoid later disappointments, is the advice of the service bureau of the California Associated Raisin Company. The United States department of agriculture, as well as growers who have investigated these two varieties, consider the Panariti, or so-called Black Corinth, far superior in quality to the white variety. The Panariti at present enjoys a better demand from the trade.

The bureau of service points out that growers should specify the variety they wish to plant when securing cuttings or rooted vines, and not simply ask for Zante currants, as both varieties are commonly known by that name.

TO ISSUE BULLETIN ON ZANTE CURRANTS

Growers who are interested in the culture of the Zante currant in California should get their names and addresses on the mailing list for two bulletins on this subject which are soon to be issued by the United States department of agriculture.

The department has asked the bureau of service of the Raisin Association to secure the names and addresses of all growers who have vines of either variety of Zante currants, as well as those who are planning to grow this crop, in order that these bulletins may be placed where they will be of the most value. A letter addressed to Bureau of Service, California Associated Raisin Company, Fresno, containing your name and address will insure receipt of these bulletins as soon as they are issued.

OUR IMMIGRANTS

Of the total of 33,200,103 immigrant aliens coming to the United States during the last 100 years, 29,552,198 were from Europe, 788,290 from Asia, and 1,883,267 from British North America. The heaviest influx came in the order named: Great Britain, Germany, Italy, Austria-Hungary, Russia, British North America. In the past 100 years France has sent us but 523,820 immigrants. In certain years the Irish element not only out numbered all other immigrants from Europe, but exceeded that from all other countries.

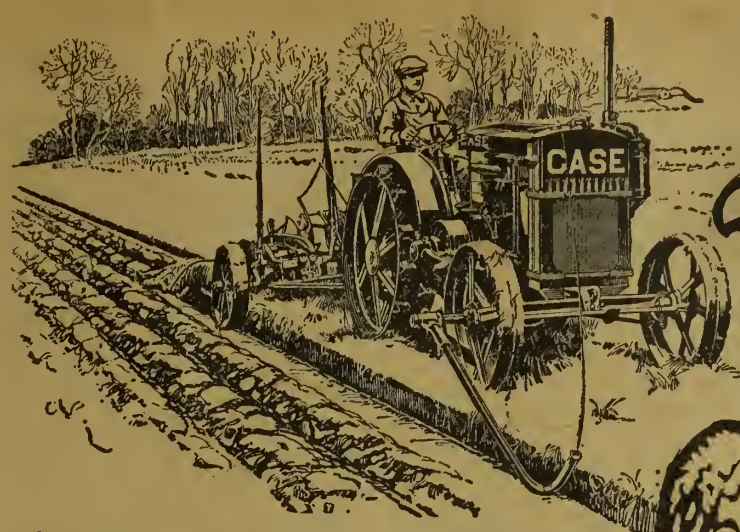

Illustration shows Case 10-18 Kerosene Tractor pulling 2-bottom Grand Detour Plow.

Remember This Trade Mark as Well as the Name of

CASE

The world-famous trade mark of the Eagle on the Globe identifies all machinery manufactured by the J. I. Case Threshing Machine Company.

Now, here's a straightforward, heart-to-heart statement of why you should know what this trade mark means to you—why you should give preference to farm machinery on which it appears.

You know the advantage and value of experienced, reliable farm help—the kind you can depend on through "thick-and-thin;"—the kind that "sticks" the year round if you need it!

That's exactly what you get—in mechanical form—when you buy machinery built by this company and bearing the good old trade mark of the Eagle on the Globe.

This company has been building superior machines for farmers for 77 years—probably long before you were born! Often our machines have been a little higher in price than others; but you could bet your bottom dollar on their dependability in "a pinch;"—on better work and more of it and over a long period of years.

Look for the trade mark of the Eagle on the Globe on

Red Spider Must be Controlled

By E. R. deOng

RED SPIDER is the most serious orchard pest of the Sacramento Valley and to a varying extent in other parts of the state. The wide range of host plants and the severity of their attack makes them an important factor in a large part of the orchard districts of the state. We may include under the term red spider the three or four common plant mites whose feeding is of a similar type. If so, we are speaking of a pest that is found to a certain extent in almost every deciduous or citrus orchard of the state.

The insect pests of our orchard, whose feeding is similar to that of red spider, such as scale insects and aphids, are not usually so injurious because they feed mostly on the elaborated plant food contained in the sap and not to so great an extent on the chlorophyll. The injury caused by these insects is through the extraction of large quantities of water and food prepared for the plant's use and possibly the injection of a toxic material which is poisonous to the plant or through the smutting of the fruit. Examples of the latter types of injury are the San Jose scale, the purple aphis of the apple and the European fruit scale. With the exception of insects which inject poisonous materials into the plant it is possible for most trees to support a large nnmber of sucking insects, unless the tree is already suffering from drouth. But in the latter case the additional drain on the water supply of the tree may become a serious factor.

The red spider, however, not only extracts the sap but also the chlorophyll (the green coloring matter of the leaf and young bark). Dr. Whitten has been showing us that a tree without chlorophyll is in a weakened condition, incapable of manufacturing its own food in sufficient quantity for its needs, and from the nature of the plant, unable to utilize such material from any other source, providing it was available. Hence our orchards while undergoing the strain of maturing a crop, manufacturing starch for present needs and for next year's buds, and storing food in the sap, are depleted of the very organs which alone are capable of supplying this need.

We have been told at various times by Dr. Whitten that the dark green, thickened, older leaves of the center and lower part of the tree are of more value in the manufacture of sugar than the newly expanded leaves, because they contain more chlorophyll and by reason of their thickened cuticle evaporate less water. Here again we see the extreme danger of red spider attack, for it is on these leaves that we usually find them most abundant, and the paling effect of their presence most evident. Possibly the greater abundance of chlorophyll in these leaves is the cause of their locating in this part of the tree. Insects which are more of sap feeders, such as thrips and aphids, will be found on the newly expanded leaves which contain relatively a small amount of chlorophyll but are turgid with sap and hence are of less value to the tree than the dark colored ones upon which the mites feed.

The results of red spider attack then are primarily the reduction of the amount of elaborated sugar and starch and secondly the possibility of defoliation—with sunburn as a natural consequence. This absence of foliage persists throughout the remainder of the year unless new leaves are grown at the expense of earlier stored food. The checking of sugar manufacture in midsummer may mean a reduction in the amount of sugar and other nutrients present in the prune and almond, with a resulting inferior crop. The buds for next year's leaves and flowers, which are ripening at this time, will have an insufficient supply of stored food and hence will not make as strong nor as rapid a growth. (The quick growth which a tree makes in the early spring is possible only by reason of feed stored the previous year.) The attack may become so severe that the tree is unable to provide food for its immediate need. Then it is quite probable that food stored earlier in the year will be translocated and utilized immediately, thus reducing next year's supply of food. Lastly, it remains for Dr. Whitten to point out the possibility of another serious injury which most of us had not recognized. I refer to the lowering of the amount of sugar in solution in the sap, thus rendering the tree more susceptible to frost injury. From what has been said it will be seen that the feeding of red spider would tend to cause this very type of injury and thus put the tree in a more serious condition than we had thought for.

These points, I think, will serve to emphasize the need of an early attempt to control the spider. This work should be done early in the season before injury becomes noticeable. Where injury has been known to be common the sulphur should be applied early in the summer even though the spider has not been noted.

AID FOR PEAR GROWERS IN PACIFIC NORTHWEST

The culture of pears in the Pacific Northwest beyond the Cascade Mountains has suffered severe losses from time to time and its development has been retarded by various insect pests and by pear scab, a fungous disease, which are not sufficiently understood by the average orchardist. While the scab, to cite the most serious disease, is readily controlled by sprays, it annually causes a heavy loss because of inefficient spraying materials and carelessness as to the time or manner of application. The crop yield is frequently cut from 50 to 75 per cent, and unsprayed fruit is often so unsightly as to be almost worthless.

Though spring and summer spraying of pears for the control of scab has been generally practiced, the results, for the reasons indicated, have often been disappointing, especially when spraying has not included an insecticide for control of insects causing disfigurements that look very much like scab spots on mature pears

ANAHEIM CITRUS REPORT

W. H. Schureman makes his first annual report as secretary and manager of the Anaheim Citrus Fruit Association. He reports that the association was seriously handicapped during the early part of last year because of the flu which materially lessened the labor supply. During the preceding year there were fumigated 173,018 trees at a cost of $54.000, or 31 cents per tree. With the association reduced by division there were fumigated this year 82,000 trees with perhaps 18,000 more yet to be fumigated. During the year the association received 65 new applications for membership which totaled 579 acres of citrus groves. The association handled through the year 184,511 loose boxes of fruit which averaged net to the growers $241.

CALIFORNIA GRAPE GROWER

A new monthly has entered the field. It is the California Grape Grower, official publication of the California Grape Protective Association, with headquarters in San Francisco. It will be devoted to the interests of the wine grape growers of the state.

VACUUM PACKED WALNUTS

The Walnut Growers Association is now putting up what is called the new vacuum pack of walnut meats. The carton contains eight ounces net and the meats keep sweet for a period of months. This attractive package has been so well received by the trade that within a month after announcing it the association sold over 11,000 cases of 24 cans each.

Grape shipment records for Lodi are: 3,666 cars in 1916; 3,255 in 1917, 4,500 in 1918; 6,111 in 1919.

Clean Plowing for Clean Crops

CLEAN plowing is the *only* kind of plowing the E-B 102 tractor plow ever does. It is the plow for clean crops.

It buries every spear of stubble—even on the dryest, toughest soils of California. For this plow cuts deep enough to make a clean furrow slice, and the moldboard is shaped so as to turn the land clear over in a continuous, smooth ribbon.

The E-B 12-20 tractor and 102 plow can turn over the heaviest as well as the lightest soils. Together, they make an unbeatable plowing combination for an economical quality job.

The E-B 102 Tractor Plow

The shares on the 102 tractor plow can be changed in 5 seconds, without tools of any kind. The clean plowing of sharp shares is the mark of the E-B 102.

The weight of the plow is all carried on the wheels. Their bearings are dust-proof and anti-friction. And the E-B 102 is a one-man plow, easily operated from the seat of the tractor.

E-B 102 Tractor Plow equipped with quick-detachable shares, lever-operated.

One-man size, light draft and easy handling.

The E-B 12-20 Tractor

Lightness, reserve power, fuel economy, dependability—these are features that have made the E-B tractor famous.

And every accessory, every construction detail, of the 12-20 is chosen to make this tractor give the right service.

All working parts are enclosed; Hyatt roller bearings; K-W magneto; Bantam ball-thrust bearings; Modine Spirex radiator.

THE E-B LINE — EMERSON BRANTINGHAM FARM MACHINERY

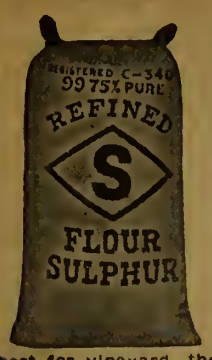
SULPHUR



It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphur that money can buy; the best for vineyard, the best for bleaching purposes, LEAVING NO ASH.

VENTILATED sublimed Sulphur—Impalpable Powder, 100 per cent pure, in double sacks, for Dry Dusting and making Paste Sulphur.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men $4 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR 100 per cent pure. This has increased various crops up to 500 per cent.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur Mixtures, etc.

And "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 DEGREES BE., Fungicides and Insecticides.

Carried in stock and mixed to order.

San Francisco Sulphur Co.

624 California Street. San Francisco, Calif.

We are equipped to make immediate shipments. Send for "ILLUSTRATED BOOKLET," also booklet "NEW USES FOR SULPHUR", Price List, and Samples.

Please state for what purpose you use the sulphur, quantity needed, and date of shipment preferred.

Strength

"Caterpillar" Tractors are famous for strength—stamina, power, durability, almost beyond belief. It's the Holt method of construction and tractor experience plus Holt design and workmanship. Buy the tractor of absolute *proven* reliability. Send for catalog 411.

HORTICULTURAL QUARANTINE NO. 37

By Ernest Braunton

THERE has been much discussion among all classes of plant handlers as to the provisions of this quarantine law, and from certain quarters very active opposition. But in California the measure has been heartily endorsed by nearly all interests, and the disgruntled are few.

The chief objections have come from Eastern brokers with water front offices in Atlantic ports. These roll top desk plantsmen imported shiploads of plants and bulbs and distributed them to dealers all over the country. They were the rankest sort of middlemen and under "37" their business has collapsed. In California florists have been the chief objectors, for did they not buy an azalea in Belgium for 40 cents, land it in California for 75 cents, and sell it in bloom at Easter for six dollars?

For several years this regulation has been in process of incubation and it did not catch us unawares, for many firms established large nurseries for the growing of azaleas, bays, heaths, rhododendrons, palms and "Dutch" bulbs, all of which were formerly imported. Persimmon and other trees originally were heavily imported from Japan, but local growers who read aright the handwriting on the wall planted seeds and budded their own stock. Thus the nation was somewhat prepared for the embargo. In a few years we shall have become so stocked with American grown trees and plants of all sorts that what some feared would be a calamity will prove an acknowledged blessing. In ornamental lines in California the shadow of the coming event moved Ward to expend a quarter of a million in Humboldt County, Bassett and Washburn $200.000 at Sierra Madre, Wilcox $150.000 at Montebello and Dieterich $25.000 in the peatlands of Southern California. Aside from these, great fields of Dutch bulbs are grown about Santa Cruz in Central California, and every standard nursery firm in the state is growing some of the stock formerly imported.

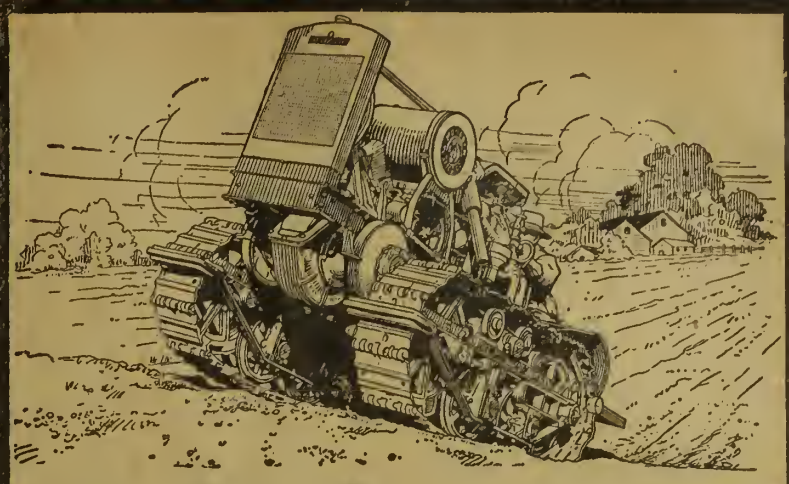
But quarantine regulation No. 37 does not prohibit; it merely restricts bringing in new varieties from any country complying with its provisions, so that necessary propagating stock may be brought in in reasonable and quite large quantities. The government maintains a detention quarantine station where all importations are held until they may safely be liberated for distribution. Finished stock, ready for the planter, is kept out. But propagating stock for use of the nurserymen is allowed to pass after reasonable detention. Nurserymen say that anyone who tries to show the federal horticultural board what he wants for importation in noverties or necessary propagating stock will meet very courteous and conscientious officials and encounter no difficulty in securing a permit.

NICOTINE SULPHATE CHECKS APPLE LEAFHOPPERS

The apple leafhopper, a destructive insect that occurs in nearly every state of the Union, may be materially checked by a single spraying with 40 per cent nicotine sulphate in the proportion of one to 1,500, combined with soap. The solution should be applied against first brood nymphs. The same treatment made three or four weeks earlier is effective against the rose leafhopper, though this species is seldom injurious enough to justify a special application.

The apple leafhopper causes serious injury to apple nursery stock by extracting the plant juices from the terminal leaves. As a consequence the leaves gradually become undersized and fail to function normally, thereby retarding the growth of the trees. The rose leafhopper feeds on the lower leaves and produces white or yellow spots on them.

During the recent high water following the rain of Thanksgiving day considerable damage was done to bridges in Arizona. The approach to the bridge over the Agua Fria on the road from Phoenix to California was washed out, entailing a damage of $50,000 to $60,000. Other bridges and roads were damaged considerably.



The Way the MONARCH Goes Up Hill

is absolute proof that the big, powerful motor has all its power properly applied to give the maximum of traction. That's what counts—the relentless grip on the ground of the MONARCH track. It makes light of hills, grades and loads.

The MONARCH can do unusual things because the underlying principle—the *Traction* principle—of the MONARCH is right. The weight is evenly distributed and the construction is flexible to allow for grades, side hills, stony lands, rough roads, etc.

MONARCH Tractors

The MONARCH 16-9 is the logical tractor for the average size farm. It has a long track which allows it to develop its fullest traction, a rating of 16 H. P. on the belt pulley, 9 H. P. on the drawbar; powerful enough to pull two plows under any condition or three plows when the soil conditions are favorable; turns in its own length and will work where horses cannot go; it is completely spring mounted, easy to operate and does not tire the operator; it has a belt pulley of the proper size located on the side of the machine. There are three speeds, 1½, 2¼ and 3½ M. P. H. with a governor which regulates the motor speed at all times.

Do not confuse MONARCH Tractors with the so-called "track-laying" types. The track on the MONARCH is made of wear resisting manganese steel. We guarantee to duplicate for MONARCH Tractors *any written warranty* put out by any other responsible tractor manufacturer.

MONARCH Tractors are made in the following sizes: 16-9 H. P., 12-02 and 30-18 H. P.

Write for literature on MONARCH Tractors. We will also be glad to send you our *"Performance Booklet."*

New Features in Agricultural Census

AMONG the new features included in the approaching 1920 census of agriculture will be a series of questions relating to the amount of corn and other crops raised for silage purposes. These statistics on silage, which are to be collected by the bureau of census in accordance with the recommendations made to that bureau and to congress by the United States department of agriculture, are expected to furnish accurate and comprehensive figures on this important phase of farming which have heretofore been lacking. The facts and figures gathered in the census on this subject will be tabulated so as to show what each county as well as what each state produced in the way of silage during the year 1919.

The census bureau also announces the inclusion in the farm schedule f questions to show how many farmers own tractors and automobiles and how many have heating and lighting plants and telephones in their homes. These questions are designed primarily to make known the better living conditions and modern improvements on farms in all sections of the country. The census bureau, in including these questions for the 1920 census, was guided by suggestions from leading farm economists as well as by communications from farmers' organizations. The department of agriculture is also interested in these questions and gave its endorsement to the plan.

Copies of Schedules for Farmers

Any farmer who desires a copy of the agriculture schedule in advance may secure one by writing Bureau of Census, Washington, D. C.

That the individual farmer will realize the advantage of keeping a more accurate tab on what his farm is yielding is one result of the census hoped for by the department. The schedule of questions which will be used in the approaching census will help the farmer in getting started in this work, inasmuch as it sets forth the subjects in which the government is interested and thus provides a model which any farmer can easily adapt to his own needs.

When Reports Will Be Ready

The published results of the 1920 census will be issued by the census bureau as rapidly as possible. No precise time can be set in advance as to when the first reports will appear, but it is thought that the preliminary bulletins will be issued within three months after the completion of the enumeration. Later a series of bound volumes appropriate for use as reference books in libraries and schools will be published.

These publications will show for each county, for each state, and for the country as a whole, the number of farms, the total acreage of farm lands, the value of farm property, the numbers of the different kinds of livestock, the acreage and production of all the important crops and many other items of interest connected with the farming industry.

The bulletins of the census bureau will be widely distributed and every effort will be made to make them of the greatest possible value to the farmers who furnished the information they contain.

California Orange Marmalade

THE Exchange Orange Products Company has two marmalade factories in California, one at San Dimas and one at Anaheim. Each of these works employs from 75 to 150 people and when running full capacity may each produce 7,500 pounds of marmalade daily. Just at present the run on Valencias has been finished and a general clean-up and overhauling is in process at the San Dimas house under the direction of E. S. Harrison, superintendent. Floors and walls are of concrete and all are kept so scrupulously clean that the building appears to have been built but yesterday.

About December 15 the overhauling and testing of apparatus and equipment will have been finished and the place once more resemble a human bee hive of industry. The marmalade is marketed in glass containers, of three and a half ounces, nine and one half ounces, and 16 ounces net weight, but of these the intermediate size is considered the standard. It is mostly shipped to Eastern states, but the Californian has a strong love for marmalade and the home consumption is large. All of Southern California is drawn upon for supplies, the San Dimas house drawing from the Pasadena-Alhambra district to Riverside and environs, while the Anaheim house cares for all the output of Orange County.

The housewife may be interested to know that the standard orange marmalade is made from 90 per cent oranges and ten per cent lemons. Occasionally some grapefruit has been substituted for lemon but the public taste does not approve of it.

Aside from marmalade little but orange jelly is made, though experimentation is constantly going on. During the past season some orange syrup was made and a shredded dressing for ice cream, but both are still in the experimental stage. One strange discovery was made during the past summer that may lead to a profitable by-product. Grasshoppers are very fond of the cooked orange pulp that is now a complete waste. Mr. Hopper will leave alfalfa and the daintiest succulent plants to dine on orange pulp, and this may eventually lead to his undoing or complete extermination. A little crude molasses and still less of arsenic added to the pulp quickly woos Mr. Hopper to a death feast. It is believed that this seductive hopper poison may be put on the market in the near future.

MALT SUGAR SYRUP

Malt sugar syrup is a brand new sweet which has arrived on a commercial scale at the psychological moment to relieve the sugar shortage, say specialists of the department of agriculture. Malt sugar syrup has a delicious flavor, somewhat resembling that of honey, which adds much to its palatability and value as a sugar substitute.

While malt sugar has long been known to chemists, its production on a commercial scale is only beginning. Two factors have stimulated its production recently. The shortage of sugar has developed a market for it, and the recent prohibition law has made available both the raw material and the machinery needed for its manufacture. This syrup is made from the same grains as beer, and may be made from corn or potatoes or any plant containing starch. Barley, which was used until recently in the manufacture of beer, can be used now to produce malt sugar syrup.

Breweries with very little change can be used and are now being used for its manufacture. Up to a certain point the process for making malt sugar syrup is the same as the process for making beer. Evaporating pans is the principal additional equipment required by breweries to become malt sugar syrup factories.

Malt sugar syrup looks very much like maple syrup. It can be used for everything that cane sugar is used for. While its use on the tahle may not be quite so convenient as sugar, it is a most excellent substitute for table use in the present emergency. The specialists expect that it will hereafter have a regular place in the batting order. This is a case where the substitute makes so good that the regular, whose place it takes, may have to warm the bench. While it is not likely that this new sweet will replace sugar for table use in normal times, it undoubtedly will make a place for itself in the household as it is doing in the manufacture of food products. It is an excellent, wholesome syrup, and on account of its delicious flavor is superior to sugar for some purposes in cooking and baking.

CERTIFIED SEED POTATOES

Continued from Page 779

third inspection, made at harvesting, will reveal the trouble. Mr. Aggeler says many inspectors would be needed as all want to plant about the same time and much hardship will result. A grower may be unable to get inspection of his stock when he is ready to plant and yet under the law if he plants without this inspection his crop will not be certified. If the potatoes are all right the two other inspections will sufficiently show it and if they are not the same two will abundantly prove the fraud or mistake. "Abolish the first inspection; it may aid the amateur but not the experienced grower."

Mr. Aggeler states some confusion has arisen in the past through selling the same potato under several names. A notable case of this is the British Queen, also catalogued as Scottish Chief and Oregon Blue-Blossomed White Rose, all of which he says are one and the same potato, a very good one. This firm handles three-fourths White Rose, the remaining sales going to two or three other varieties. In the past American Wonder has stood second but British Queen is forging ahead of it and no "wonder" for it is slightly superior. Burbank comes about fourth in the list and there is a slight call for Irish Cobbler, but "round potatoes are never in demand as compared to the oblong varieties." Asked as to the work of the state department of agriculture, through the activities of W. V. Shear, the dealers were unanimous in the opinion that nothing but good could come from it and one stated that for five years past his firm has been advocating official control of the seed potato crop.

THE JAPANESE QUESTION

Continued from Page 781

made by the little brown man. Our constant cry is 'back to the land.' This appeal is of no avail so long as the native born white man must compete with the Oriental.

"Self-preservation of the people of my district demands that I should use every effort in my power to prevent any more land falling into the hands of the Japanese.

"The picture bride is contrary to American ideals, customs and the laws which we make for our own people. Why should we tolerate it?

"That our representatives in the national congress have failed to attack this evil as an international question is only the greater incentive for action on the part of the California legislature."

Citizens have been roused to the pitch of making apepals to land owners, and partially consummated deals for real estate on the part of Japanese minors and land owners have been rescinded.

Cousins

Chester Rowell, editor of the Fresno Republican, suggests:

"We need to take a severe grip on ourselves on this Japanese question. There is no need of jingoism There is no need of offending Japan. There is no need of talking conflict or of going out of our way to discuss Pacific coast defense. Nor is it proper or wise to live in a fool's paradise and assume that by ignoring questions they will cease to exist. To follow with those who seek peace by conceding every issue that is raised is usually the shortest way to bitter conflict The policy which would discuss race questions on a theoretical basis of the brotherhood of man, ignoring the existence of race lines, would be suicidal.

"For in fact human beings are not brothers at all, but cousins. Brothers are of the same blood. Cousins are of mixed blood. We live and move and have our beings by districts or territories or nations, not by the earth as a whole. We are not brothers to the Japanese, but cousins. And there is a vast difference between brotherly intimacy and cousinly amiability

"For one thing, the lines of justice need to be closer drawn. There is no justice in demanding all and in yielding nothing. There is no justice in demanding the treatment of a citizen and the protection of a foreigner. We need to impose on ourselves in the Orient and on the Japanese in this country the duties and the responsibilities of visitorship, not of citizenship. The Japanese who comes to this country with the assurance of his country's protection should realize along with it the limitations of foreign residence. The Yankee or the European who goes to Asia with the power of Occidental gunboats at his back must know that every act of his there is predicated by this same exhibition of power. Let us be nationally just. Let us demand of the Japanese that they demand nothing of us, in California, that would amount to race suicide. Let us concede the same to them in Asia."

AMERICAN MARKETS IN SPAIN

Under the name Sociedad Americana de Expansion Comercial, an organization has been founded in Spain which is to devote its activities to the development of commercial relations between Spain and America. Four permanent expositions will be established for the benefit of American manufacturers who desire to display their goods. The society has four offices in Spain and will wage a publicity campaign and give out information on trade conditions, etc., to all who apply.

CHRISTMAS POT PLANTS

A visit to the greenhouses and florists' growing establishments convinces one that times are not hard nor money scarce. Choice pot plants by the score are labeled "sold," and the prices are an advance on anything before recorded. But the stock is exceptionally fine though it is doubtful if the supply will be equal to the Christmas demand.

Rex begonias are once more coming into popular favor, especially those having red or allied markings in the leaf, the silver sheen types also proving good sellers. The begonia Gloire de Lorraine, so much seen a few years ago, is now a thing of the past, being superseded by three improved varieties known as Cincinnati, Chatelaine, and the still later Melior. The fern supply has been supplemented by a new variety of the Boston fern, known as Woodii, that does not revert to the Boston type as so many do. Poinsettias were never brighter in color or more luxuriant in growth and bring stiff prices. Jerusalem cherries and several other varieties of small fruited cherries are now bright with masses of scarlet berries and the whole floral outlook for Christmas is bright from the dealer's point of view.

TRADE WITH ARGENTINA

During 1918 the United States was the heaviest shipper to Argentina, in value $169,500,000, as against Great Britain's $125,000,000. But the latter country imported from Argentina to a value of $305,800,000 to our $165,100,000. The most striking difference between the imports and exports of any one country is in the case of Japan, which purchased goods of a value of but $2,800,000 and sold to Argentina products valued at $15,200,000. Norway was proportionately the heaviest buyer, paying $4,200,000 and in return received orders to the value of but $900,000.

PALESTINE IRRIGATION

The historic Dead Sea, which is so impregnated with salt that bathers therein cannot sink, is about to be freshened. A tunnel is proposed from the Mediterranean to the Dead Sea, passing under Jerusalem. This would afford an immense power which could be utilized to pump water from lakes and rivers, generate electricity and operate all sorts of industrial and manufacturing establishments. Salt works would be instituted at the Dead Sea end, for the water in that depression contains 200 pounds of salt to every ton.

COFFEE FROM VERA CRUZ

A consular report shows that the coffee exportations from Vera Cruz, Mexico, to the United States in the first six months of 1919 were 8,904,205 pounds, valued at $2,131,815, against 9,901,739 pounds in the corresponding period for 1918, valued at $1,200,640. This figures out a 1919 value per pound at a fraction less than 24 cents, while the 1918 price was a fraction over 12 cents, having almost doubled in one year.

RICE AND PEANUT IMPORTS

In the first half of 1919 we imported but $40,639 worth of peanuts from Hongkong, while for the first six months of 1918 we bought $614,693 worth, or more than 15 times as much. During the same period we imported breadstuffs, principally rice, to the value of $10,361,920 in 1918 and but $3,377,096 worth in 1919. In all exports to the United States from Hongkong the value in 1919 was but a little more than one-fourth as much as in 1918.

Chandler, Arizona, experienced the heaviest snowfall ever known there, on November 28.

WATER DAMAGE ADDS MORE

Great Bargains

IN OUR

$15,000 Implement Sale

Two weeks ago fire destroyed a Picture Framing Establishment on the Third Floor of our Los Angeles street store. The fire was entirely confined to the Third Floor but we got the water. Settlement of damages has been effected and the big clean up sale of implements will now continue. On many implements where water damages were allowed we can make still further reductions. Remember we bought this stock **at a discount below pre-war prices** and have been selling plows, sulkies, mowing machines, pumps, cutters and dozens of other implements **at less than present factory cost.** Any farmer needing these things and having money in the bank from high priced crops is overlooking opportunities of making big savings by not buying needed implements in this sale. Many, after buying one implement have returned and bought everything they could use, realizing that big savings were being made and with factories closing and strikes holding up deliveries, **prices on these very items are sure to go higher.** Look these prices over and write for our full list in the sale. We may have just what you want though not mentioned here:

Casaday Captor 12 inch Riding Plow Horse Drawn (South Bend)
List Price $180.00 Sale Price $150.00
All kinds of plows in the sale at greatly reduced prices

Hurst Sprayers

None better—a great nationally known line at ridiculously low prices. (We cannot spare room for sprayers.)

10 Gal. wheel driver wheelbarrow, tree, vine, vegetable sprayer—list price $37.75. Sale Price $27.00. 20 Gal., list price $47.50, Sale Price $32.50.

Tank sprayer, about 100 gals. horse drawn on high wheels. List price $125.00, Sale Price $75.00.

50 Gal. Barrel Sprayer No. 14, list price $79.00, Sale Price $55.00.

Gas Engines

Our customers have been buying gas engines. We have a few left and quote prices approximately 50 per cent below list. We will include the water damage allowed and clean up the stock. Gas engines are worth real money, too.

Ward Force Pumps

Water didn't hurt the pumps and we couldn't sell them cheaper than the first announced sale price, only $8.15.

Garden Cultivators, Planters, Feed Cutters, etc., on sale at special low prices.

Contractors' Opportunity

We are including Railroad Plows and Wheel Scrapers in the sale AT LESS THAN CARLOAD FACTORY PRICES.

3000 lbs. bolts at only 10 cents per lb.

Assorted sizes—at list they average 22 cents at retail stores—better buy a few at 10 cents.

We are manufacturers of **Foshmir** and **Stockton** Plows and have a supply of Foshmir shares in stock on which we are not profiteering.

We have three grain drills left—the big price cut brought reorders. See page 552 Cultivator ad Oct. 25th AND HURRY.

These items are only samples. Write for complete sale lists, inquiring especially for prices on what you are most interested.

The Bean Outlook

President G. A. Turner of the California Bean Growers Association, who has just returned from an extended trip in the East where he has been looking after the export and other business of the association, is very optimistic as to the future of the bean industry. During his absence Mr. Turner completed arrangements for the sale of some 230,000 sacks of beans for export, and just previous to his return closed an order for 3,500 tons for the relief commission for immediate shipment.

In speaking of the general situation, Mr. Turner said: "In my opinion the unsettled condition of the export bean market is largely due to the delay in signing the peace treaty. There is a large foreign requirement for beans and these orders must ultimately be filled from American stocks.

"The Eastern market will no doubt be greatly relieved by the volume of orders obtained by the association, as they are spot orders and the New York market is bound to reflect the effect of the release of this quantity of beans. Already there is a firmer tone and normal advances on all varieties are looked for in the very near future. The trade in general is taking more interest in beans and there seems to be no question but that we are over the peak and a good business will continue from now on.

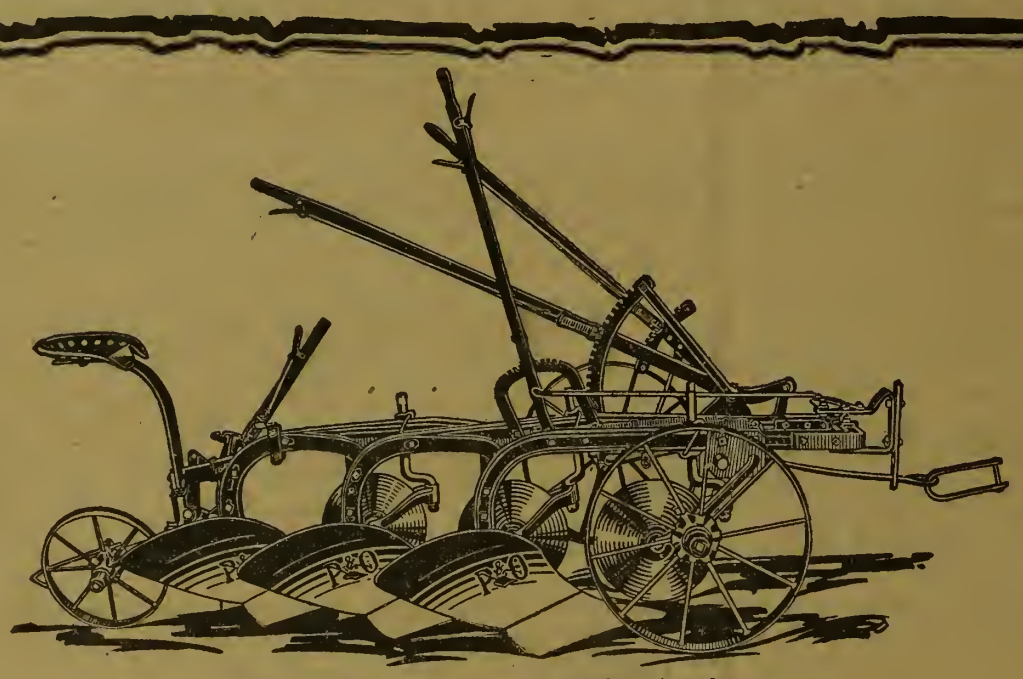
"As to the general 1919 crop conditions. Data thus far secured would indicate a substantial decrease in both American and Oriental crops, the decrease being greater than quoted in the most conservative statements thus far given out.

"I had several conferences with Herbert Hoover, who takes a very optimistic view of the general situation and of beans in particular. Mr. Hoover stated that there is no large surplus of beans today over the world's needs and the American production over our home requirements should ordinarily be absorbed by European nations. He also was of the opinion that the present difficulty in marketing was due to delay in ratifying the peace treaty. The gold and securities of European countries have been greatly exhausted and without raw material to give their people work they are unable to export goods in exchange for food, as is normally the case. They are therefore forced to buy food and raw material on credit until economic conditions adjust themselves, and with a low credit orders are naturally slow in being placed. This he thought was but temporary and with the consummation of peace American products should resume their normal flow toward Europe.

"The movement to the domestic consuming centers is greater at this time than it has been at any period since the termination of the war. The fact that these goods are going into direct consumption is one of the most encouraging aspects of the situation. While prices are still below production cost on some varieties, the general tendency is for a steady improvement. One of the greatest facts favoring the California producer is the excellent quality of this year's production, which, owing to favorable harvesting weather, comes through absolutely free from rain damage and consequently the California product can compete favorably with the product of any other bean producing section.

"The large quantity of more or less damaged beans from last year's crop was one of our greatest problems, but happily these damaged beans have practically all been disposed of.

"Negotiations are now pending on two very large export orders, the details of which the association hopes to be able to announce in the very near future."



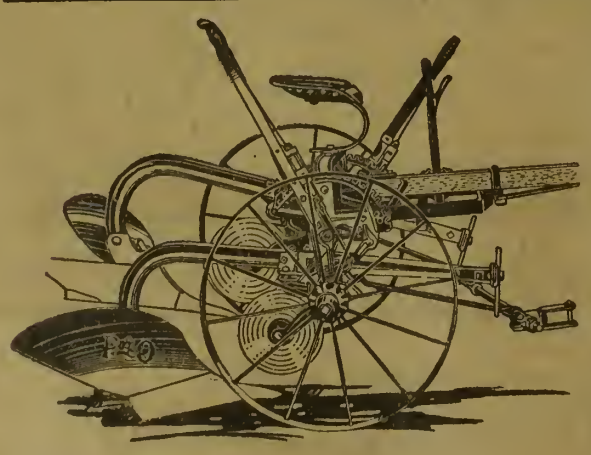
P&O Walking Gang Plow, with Riding Attachment

The Hillside Farmer and his Plowing Problems

HERE are two plows, entirely different from each other in construction, both of which have made good on hillsides and slopes in various sections of the country.

The P&O **Walking Gang** is a big, heavy plow, made in two-, three- and four-furrow sizes, with a wide wheel-tread preventing it from tipping over or losing the line of draft on hillsides. It is strong enough to withstand the strain and pull of all the horses that may be hitched to it. The plow will hold—the farmer's worry is, "will the harness stand the strain?" The two- and three-furrow sizes can be increased one furrow in capacity by the addition of an extra bottom, and the four-furrow can be reduced to a three-furrow by the removal of one bottom. This enables a farmer to regulate the size of his plow to meet his own local plowing conditions.

The P&O **Two-Way Success Sulky** has two bottoms, one right- and one left-hand, one being raised while the other is in the ground. The hitch is adjustable for two or three horses. In using this plow the furrows are all turned one way—down the hill—as the team travels back and forth, one furrow being turned right-hand and the other left-hand. This plow turns around like a racing sulky, and it can be backed up into corners. To say that it is a "P&O" is as good as saying that it is simple and strong; built right.



P&O Two-Way Success Sulky Plow

Call on the International dealer and let him tell more about these plows—the kind that minimize the labor of turning furrows on slopes and hillsides.

SWEET POTATOES REQUIRE CAREFUL HANDLING

Sweet potatoes deserve as careful handling as apples. In fact, they will not stand the rough handling that apples are often subjected to in grading and packing.

This statement may surprise many sweet potato growers who are not in the habit of taking pains to avoid bruising this product. The question of proper handling of sweet potatoes is one of several points touched on in a publication just issued by the bureau of plant industry of the United States department of agriculture, Farmers' Bulletin 1059, entitled "Sweet Potato Diseases."

One of the chief barriers to the extension of sweet potato growing in this country is the inability of farmers to keep sweet potatoes in storage so that they can be placed on the market in winter when prices are good. Consequently most of the crop grown in the South is consumed locally or sold at digging time when prices are low. A few sweet potatoes go to northern markets in winter, and even in the South they can not be obtained with any degree of certainty at that season. Specialists of the department of agriculture believe that if storage methods and principles were better understood, far more sweet potatoes would be available for winter use.

FARMERS SHOULD WELCOME THE CENSUS ENUMERATOR

The work of taking the 1920 census will soon be under way. There is no other single project undertaken by either state or federal government that should yield such large and valuable results as a complete census of our population and its industries. This year the director of the census has received aid from the United States department of agriculture in preparing the questions for farmers. He is making a great effort to get the data from the farmers that will be of most value to them when it is compiled. For this reason farmers should give every assistance possible to the enumerators when they call. The director of the census is sending to every farmer an advance sheet to give some indication of what will be asked. If each one will make a particular effort to have this data ready for the enumerator it will not only facilitate the work but will add greatly to the accuracy of the final results.

The data collected from farmers and published in the census is quoted throughout the land by representatives in our legislative bodies, by newspapers, and by other agencies in an effort to influence the state policy toward the farming population. Much harm can be done in this way unless the farmers themselves take every means of getting for the enumerator accurate and reliable data regarding farming conditions.

BEANS

New York warehouses have been cleared of their stock of California beans, 70 carloads having been sold for export to foreign countries, according to word received by Sacramento dealers. As a result orders are now being received from New York buyers for this year's California crop. The bean crop in Central California this year was about one-third of the total yield in 1918, and according to George F. Maddock, vice-president of the California Bean Growers Association, the acreage will be further reduced next year. This reduction in acreage is due to two reasons—the fact that Manchurian beans, produced under cheap labor conditions, are coming into California almost daily and competing with the locally grown product and second, because growers have found it more profitable to raise other crops.

Bean prices have been comparatively low until recently when the association made a number of large sales of 1918 stock at the following prices: Pinks, $6.21; small whites, $6.05; large whites, $6.25; blackeyes, $6; bayous, $6.10. These sales approximated 30,000 sacks.

California growers are urging a tariff on beans that will give them protection from the foreign production.

MUTUAL INSURANCE COMPANIES MEET

The National Association of Mutual Insurance Companies held its 24th annual convention at Des Moines November 17-21. The meeting was notable for its harmony, interest, and the unprecedented attendance. There were over 630 delegates from 26 different states. A majority of them were representatives of state, county or farm mutuals. The trend in this country with regard to all business is strikingly displayed when the officers of these farm companies whose respective businesses are confined to certain localities meet together and formulate uniform plans for transacting business and combating the fire cost and waste. The farm mutuals furnish sound protection at a cost generally running about 40 per cent of the stock company rates. Better mutual service, inspection and improvement of risk methods to enable further decrease in cost were presented.

The speakers called attention to the fact that the mutual companies are American institutions of and for their policy holders and are a potent factor in keeping insurance money in this country. That 25 foreign companies, doing only a reinsurance business, received more than $50,000,000 in American premiums during 1918 was cited in this connection.

The association instituted a campaign of education to the end that all preventable loss may be combated definitely, systematically and in a spirit of patriotic determination, and resolved that other interests, both public and private, be invited to cooperate "to the end that the continued loss of life and property may be reduced to a minimum and that all carelessness, waste and extravagance may be eliminated as factors in the cost of insurance protection."

HOME TANNING OF SKINS

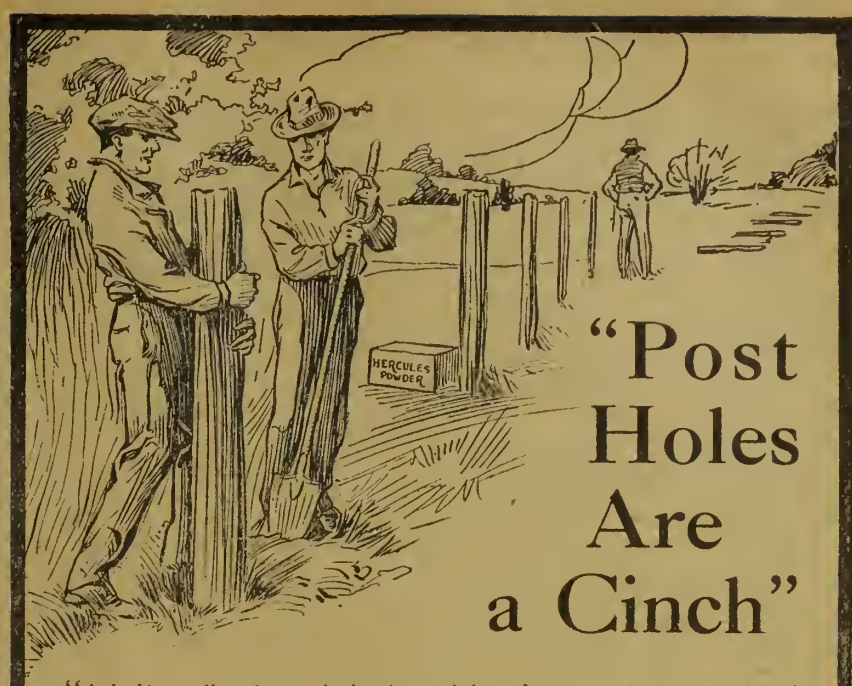
When it is desired to preserve the skins of wild animals which have been shot or trapped, these may be tanned either with the hair on or off, as desired. Hair can be removed from hides by soaking them in tepid water made alkaline by lye or lime. The following recipe for a tanning liquor is furnished by the biological survey of the United States department of agriculture: To each gallon of water add one quart of salt and one-half ounce of sulphuric acid. This mixture should not be kept in a metal container. Thin skins are tanned by this liquor in one day; heavy skins must remain in it longer. They may remain in it indefinitely without harm.

When removed from this liquor, the skins are washed several times in soapy water, wrung as dry as possible and rubbed on the flesh side with a cake of hard soap. They are then folded in the middle, hung lengthwise over a line, hair side out, and left to dry. When both surfaces are barely dry and the interior is still moist, they are laid over a smooth, rounded board and scraped on the flesh side with the edge of a worn flat file, or a similar blunt edged tool. In this way an inner layer is removed and the skins become nearly white in color. They are then stretched, rubbed and twisted until quite dry. If parts of a skin are still hard and stiff, the soaping, drying and stretching process is repeated until the entire skin is soft. Fresh butter or other animal fat, worked into skins while they are warm and then worked out again by a hasty bath in gasoline, increase their softness.

TRACTOR SHORT COURSE

A tractor short course will be given at Riverside, at the citrus experiment station, February 23-28, by the University of California.

The course will be open to owners and operators of tractors and to all interested in tractors and tractor tools. Ten leading makes of tractors in charge of competent factory instructors will be the subjects of the study. Enrollment has been limited to 180 students. Applicants should send their names to Director, Citrus Experiment Station, Riverside, California.



"Post Holes Are a Cinch"

"A half a mile of post holes is no joke when you dig 'em by hand —but with the help of *dynamite* it's a different story. Blasting the holes is a cinch and it saves more than half the work on a job like this. We've saved hundreds of dollars and days of back-breaking work this year by using

HERCULES DYNAMITE

"You'll never know *all* the ways in which explosives can help you in farm and orchard work until you've read 'Progressive Cultivation'. This book tells all about the uses of dynamite for tree planting, draining, clearing land, digging post holes and cellars, road building, grading and many other purposes.

"This 68 page illustrated book will be sent free to any farmer or orchardist who signs the attached coupon and mails it to the Hercules Powder Co."

Send today for "Progressive Cultivation" — you need it in your business.

TOP DRESSING TALKS, No. 2

Feed Your Wheat

"Sulphate of Ammonia was applied to the growing grain on February 11th at the rate of 200 pounds per acre and the yield of wheat was increased from 822 pounds per acre to 2,114 pounds per acre; an increase of 157 per cent."

The above is an extract from California Experiment Station Circular No. 172. The results of this Station's investigations for several years past have shown that the depleted yields of wheat on continuously cropped lands are due to a lack of sufficient available nitrogen. For greatest profits top dress all crops needing nitrogen with the great American Ammoniate.

ARCADIAN

Sulphate of Ammonia

It is the only safe and economical carrier of nitrogen for California soils. It does not injure the physical condition of the soil.

Sulphate of Ammonia is the well-known standard article that has done you good service in your mixed fertilizers for years past.

Arcadian is the kiln-dried and screened grade, made fine and dry for top dressing purposes. Ammonia 25¼ per cent. guaranteed. Made in U. S. A.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Sulphuring Grapes

Will you kindly tell me the proper time to sulphur grapes? Also the method.—Subscriber, Palo Cedro.

It depends entirely upon what the subscriber is to sulphur for. In case it is to prevent mildew the work should be done in the spring time when grapes begin growing and before and after blossoming time. If, however, control of mealybug is desired by the fumigation of the dormant vines that should be done during the present winter season. Full information regarding this work has not yet been given out but will be about the first of January by the state department of agriculture. Investigations along this line have been made by Mr. Nougaret of the department.

Sugar Cured Pork

Do you have a recipe for sugar curing pork?—Subscriber, La Verne.

Several formulas will be given in next week's issue.

Brown Spots in Apple

I just received your "prize books" and am much pleased, especially with the "Farm Questions and Answers," and am going to ask you a couple and see if you can't enlighten us. We have an apparently healthy Baldwin apple orchard, not old but large trees bearing several years. Since carefully picking in October three-fourths of the fruit is affected all through with brown specks, so of course rendering them unsaleable. It does not affect the taste but looks bad. We have seen these specks before in the very large ones where there were but few apples on the tree. The specks are easily discernible through the skin. We used to think possibly it might be caused by too rank a growth of limbs and shade, the fruit not getting sufficient sun. The most affected were the rankest growing trees, receiving irrigating water from the potatoes above them.—Subscriber, La Verne.

This is a serious condition affecting many of our apples. As yet no fungous cause has been discovered and it appears to be more of a physical condition of the apple which develops to a serious extent these brown spots, especially in cold storage.

Barium Carbonate

Several readers have written of their inabiltiy to secure barium carbonate, even from large handlers of chemicals. A letter to the department of agriculture, bureau of biological survey, brings information that several large Eastern concerns handle it, but the only name given on the Pacific Coast is that of Herbert F. Dugan, 1170 Sutter St., San Francisco. Barium carbonate was recommended in a former Cultivator as one of the best of rat poisons.

Yucaipa Valley

Can you give me any information about the Yucaipa Valley; where located, water supply, transportation, etc.? I have noticed in the agricultural news notes of your excellent publication that it is a good apple section.—Inquirer, Omak, Washington.

The Yucaipa Valley is in San Bernardino County a few miles up in the foothills from Redlands and near the entrance to Oak Glen, also an exceptionally fine apple growing section. There are two shipping points: Redlands on the Southern Pacific, Santa Fe and electric lines; Beaumont on the Southern Pacific. We are mailing descriptive circular.

Winter Cabbage

What can you tell me about raising winter cabbage?—A. E. E., Owensmouth.

The varieties used in local fields for winter cabbage are Winningstadt and Cannonball. The former weighs about three pounds and the latter runs five to eight pounds. It requires about five and a half months from seed to harvest. Sown at once they could be marketed in April-May. The shipping season closes about June 1 so contemplating planters should get busy at once.

Sale of War Supplies

Does the government sell trucks or automobiles to discharged soldiers?—Subscriber, Winton.

There have been sales of foodstuffs and also of horses but we have seen no announcement whatever as to motor trucks or autos.

Spray for Codling Moth

What is the best spray and when should it be applied for the control of the codling moth?—Subscriber, Lompoc.

The best spray is an arsenate formula for which was given in the spray special of the Cultivator of August 9. It should be applied at time when the petals are falling from the blossoms, again about ten days later, and again about three weeks later. The number of sprayings and the time of application varies, however, in different sections, but we heard one Los Angeles County grower assert that his apple trees sprayed as above indicated gave absolutely 100 per cent worm free fruit.

Analysis of Water

A subscriber wishes information as to securing analysis of drinking water and as to whether the state board of health will make the analysis. We have a letter from E. J. Lea, director of the bureau of foods and drugs, in which he says: "There is no provision for analyzing samples for private parties as work of this nature is done by commercial chemists."

Nursery Practices

Will you kindly inform me where I can get information in regard to raising of apricot and peach nursery stock, kind of root stock to use, etc.?—Subscriber, Santa Ana.

The most practical book we know of is Bailey's "The Nursery Book," published by the Macmillans, New York. Formerly its price was $1.50, which probably is now materially increased.

Warbles

We noticed several little lumps on the back of our cow. On inspection and pressing a white wire worm about three-eighths of an inch long was emitted. What caused this? What remedy should be used?—Subscriber, Pomona.

This is a case of warbles. The best treatment is to make slight enlargement of the breathing hole of the worm in the skin of the cow and press out the grub. Be sure aud crush the grub after removing. Some destroy by using ordinary oil can filled with kerosene. Some of the kerosene is forced through the opening, which kills the worm.

Volunteering Milo

In regard to your subscriber's inquiry about the feasibility of volunteering milo, will say that I have seen it done in large fields in the Imperial Valley. The second year produced sometimes two crops with a minimum of expense and labor. Have been told that there have been fields volunteered for four years or more, but the crops grew poorer after the second year, as does cotton when volunteered. Although occasionally profitable, it is not considered good farming practice because the land tends to foul, the heads grow smaller and some of the seed reverts to sorghum types. Do not believe volunteering would work where there is much winter rainfall, as the roots might sour, or rot, making a poor stand.—K. S. Harlow, Poway.

Soft Butter

We have a five year old cow which gives a fine flow of rich milk. The cream does not separate well and the

butter comes and stays soft. Is there any remedy? —Subscriber, Ontario.

This question was referred to E. H. Hagemann, who answers:

As correct temperatures play such a very important part in all operations of dairy manufacture, I would suggest to subscriber of the Cultivator who has difficulty in cream separation and soft butter that he use a lower temperature, setting the milk in a deep, small diameter can in water at between 50 and 60 degrees Fahrenheit, skimming the cream in 24 hours after setting, if gravity or natural method of cream raising is employed, as I take it to be practiced in this instance. A good dairy thermometer should be secured so that uniform temperatures can be used and recorded. Churning cream with too high a temperature results in soft and weak body of the butter, which does not easily firm up. Churning temperatures of cream for small dairies in winter should be around 58 to 65 degrees and in summer 52 to 58, depending, of course, on the feed eaten and lactation period of the cows. If cows are fresh and on green feed, composition of the butter fat becomes softer and particles of butter fat globules are larger and therefore a lower temperature in churning should be used. When cows are well advanced in period of lactation and fed on dry material also, composition of butter fat in milk becomes harder and particles of butter fat globules smaller and do not adhere as readily in churning and a higher churning temperature is employed. In dairies of from one to three or four cows, it is even more important to note above changes than in a large one or where butter is made from cream of several herds, or at a regular creamery, as in the latter fresh cows are usually coming in at different periods, which keeps butter fat composition in the milk more even. Churn at such a temperature that butter will come in about 40 minutes, using a lower temperature if butter comes too soft, and a little higher temperature if too hard. A little experimenting to get at the proper temperature for separation of the cream and churning of the butter will bring results.

Peach Pits for Planting

Please give me the general directions for starting peach pits for nursery purposes. Are they grown in a bed or started in nursery rows? When should they be planted? Will the frost hurt them?—J. F. G., Glenn.

Some prefer to place the seeds in boxes and cover with sand; some cover with sacks and others with straw. The one thing to avoid is drying and hardening, so some growers plant seeds direct in the nursery rows in the fall, but this is not the best or safest practice. It is better to cover seeds with sand, either in boxes or elsewhere, and keep them wet until spring. Some growers put them in any sort of box a foot or more deep, either in strata or mixed with sand, with two inches of sand on top. Water well at all times if rains do not come and about March they will sprout. Plow a deep furrow, pull back nearly all the soil, pulverizing it well, until when pits are put in you may cover them with two inches of soil. Freezing will not hurt them and in four months or less they should be large enough to bud.

Walnuts Dying Back

I have taken your magazine for a good many years. This is the first time I have written to you for information. I have two large walnut trees that are dying back rapidly, that is, in the upper branches. They have never been sprayed. Presume it is too late for that. Could they be cut back and grown out again? There are little holes in the trunk of the tree. Presume they were made by birds. Will you please tell me what I had better do with them? Please give me the formula for spraying. Also, if cut back, when is the best time?—E. C. P.

The dying back of these trees is probably caused by some soil condition and most likely from want of moisture after midsummer. If the dead branches are cut out a new top can be grown, but unless water in sufficient quantity is supplied to keep the soil always moist, the trouble will occur again. When cutting the dead branches, cut back to a smaller branch that is growing in the direction needed to fill the space occupied by the branch which is taken out, if possible. Keep the extra sprouts thinned out next summer and keep those desired for permanent branches tied and trained in the proper direction. This pruning can be done at any time from December 1 to March 1, but if done now sap will not run as freely as if done later in the spring. It is not likely any spraying is needed and if so not until next May or June when the aphis appears. Dusting is taking the place of wet spraying and this material can likely be supplied by your nearest Walnut Growers Association much cheaper than a small quantity can be made at home.—J. B. N.

Peppers

How, when and what is the best method of pruning or trimming bell peppers, chili peppers and pimentos. Also what method is used in peeling pimentos?—Subscriber, Jamacha.

Peppers are never pruned when growing commercial crops. If exhibition specimens are desired the larger part of the young peppers can be picked off as soon as the blossoms drop. The peppers are prepared for peeling by being run through a revolving drum placed over a furnace which can be regulated as to the degree of heat. This drum is set on a slope so the peppers will run through and out of the drum by the time they are properly cooked for the peeling process, which is all hand work. Written instructions alone will not enable a beginner to make a success at the start.—J. B. N.

Walnuts Dry

I have two walnut trees five or six years old that bear heavily and the nuts are not good. When they get dry the meats are all dried up. They are the Eureka variety.—Subscriber, Lompoc.

We have known Eureka walnuts to be as described when there was insufficient water to mature them. The Eureka is one of the varieties which leaf late in the spring and also carries its green leaves late in the fall, ripening the nuts much later than the Santa Barbara soft shells and Placentia walnuts. It may be that there is moisture enough in your land to mature the earlier ripening varieties but not enough to carry the Eureka through. If you will keep the soil moist through the summer and give the last irrigation during the last week of August or in the first half of September we think your walnuts will be well filled.—J. B. N

BEAN GROWERS JOURNAL

The California Bean Growers Association, headquarters of which are at Stockton, has just issued Vol. I, No. 1 of the California Bean Growers Journal. Regarding its mission and its field it says:

"It has been truly said that 'Cooperation, not competition, is the life of trade,' and it is cooperation among the growers that is going to keep the association in that position of mutual benefit and value to the industry it now enjoys.

"There are many matters of vital interest to the bean grower on the Pacific Coast, and particularly in California, that must be taken up vigorously. One that is becoming a menace is the importation of Asiatic or foreign crops, which during the past year has assumed large proportions. The time has come for legislative action and the Journal will inaugurate a campaign that it is hoped, with the individual assistance of the members, will result in a protective tariff that will eliminate this detrimental factor in the upbuilding and future of the bean industry. But in order to do all of these things the cooperation of the individual member must be had."

STATE OWNED FLOUR MILL

Minnesota will have an experimental state owned and operated flour mill, when plans authorized by the recent special session of the state legislature are carried out. First steps are now being taken for the ultimate construction of the plant which, it is believed, will be located in either St. Paul or Minneapolis.

The undertaking is in charge of the state railway and warehouse commission, with agricultural college forces acting in an advisory capacity.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Right of Way for Pipe Line

I contemplate appropriating water for irrigation purposes. The point of intake lies in the national forest reserve. Is it necessary to obtain a permit from the state water commission for such appropriation? Is it necessary to obtain right of way through the reserve for pipe lines, and if so what is the method to pursue? There is a piece of privately owned property lying between the reserve and the land on which I wish to use the water. How can I obtain a right of way through this if the owner is not inclined to grant such right of way? Does all land in a national forest reserve belong to the federal government, or is there privately owned land therein?—Subscriber, Riverside.

In order to appropriate water in this state it is necessary to file request with the state water commission. This request is then investigated and a permit to appropriate the water issued. As to the right of way through the reserve for pipe line, that matter would come under the jurisdiction of the forest supervisor of the particular forest district. The only method by which you can obtain the right of way through privately owned property is by license of the owner or purchase of either the easement or of the property. It is only the state and its agencies, such as municipalities and those engaged in public service, who have the right of acquiring land through eminent domain. Such lands lying in the national forest reserve which are found to be more fitted for agricultural purposes than for forestry purposes are usually opened for settlement, and in nearly all the forests there are considerable tracts of privately owned property acquired either in this manner or which were owned prior to the organization of the forest reserve.

Employers Liability

Is there a law in any of the northwest or western states known as the Employers Liability Act, which makes an employer liable for damages suffered by an employe while in the act of duty as required by such employer? Does this law apply to all corporations, including railroads, mining companies, farm associations, as well as the private farmer who may employ help on his farm or to construct buildings or handle machinery?—Subscriber, Bonners Ferry.

The federal liability act exists throughout the United States but is applicable only to employes engaged in interstate commerce, that is to say train and engine men employed upon trains which are engaged in such commerce, and is not applied to those engaged in local commerce. Many of the states, such as California, have workmen's compensation acts, but these acts usually expressly except those engaged in agriculture, horticulture or viticulture and those who are mere casual employes. To list the different states embraced in the characterization northwestern and western is too much of an undertaking for this medium.

Property of Minor

I purchased some property but could not get the deed recorded without having someone appointed as my guardian, as I am a minor. Is it necessary to record the deed? What is the difference between an abstract and certificate of title? — K. Kamedian, Reedley.

There is no reason why the deed cannot be recorded, as property may be owned by a minor as well as anyone of majority. Unless the deed is recorded, in case the former owner of the property should execute a deed to someone else, you would have redress only by way of damages against the former owner; you could not recover the property itself. An abstract of title is a book containing the vital wordings of the different instruments constituting the succession or chain of title from the original owner, that is to say the government, down to the individual owning the property. Since the general organization of title companies this method has fallen into disuse. We now have the certificate of the title company which issues statements to the effect that the title stands in the person indicated in the certificate subject to whatever encumbrances there may be. This certificate is usually insured.

Mail Order Shipments

I purchased farm implements upon an installment contract with an Eastern mail order house. I instructed them to include all articles in the same shipment in order that I would be obliged to pay only the one freight charge. The house disregarded my instructions, shipping the implements in different shipments, whereby the freight charges amount to about as much as the goods are worth. I have not as yet paid on the contract, and as to one shipment, I have refused to accept. What shall I do with the matter?—Subscriber, W. H. B.

If by the terms of your letter the acceptance of the order was made conditional on their shipping in one shipment, then you would have the option to refuse acceptance, or you could accept and notify them that you would accept only conditional upon their standing the excess freight, and to such excess freight you would be entitled to credit upon your amount of the payment.

Veteran's Tax Exemption

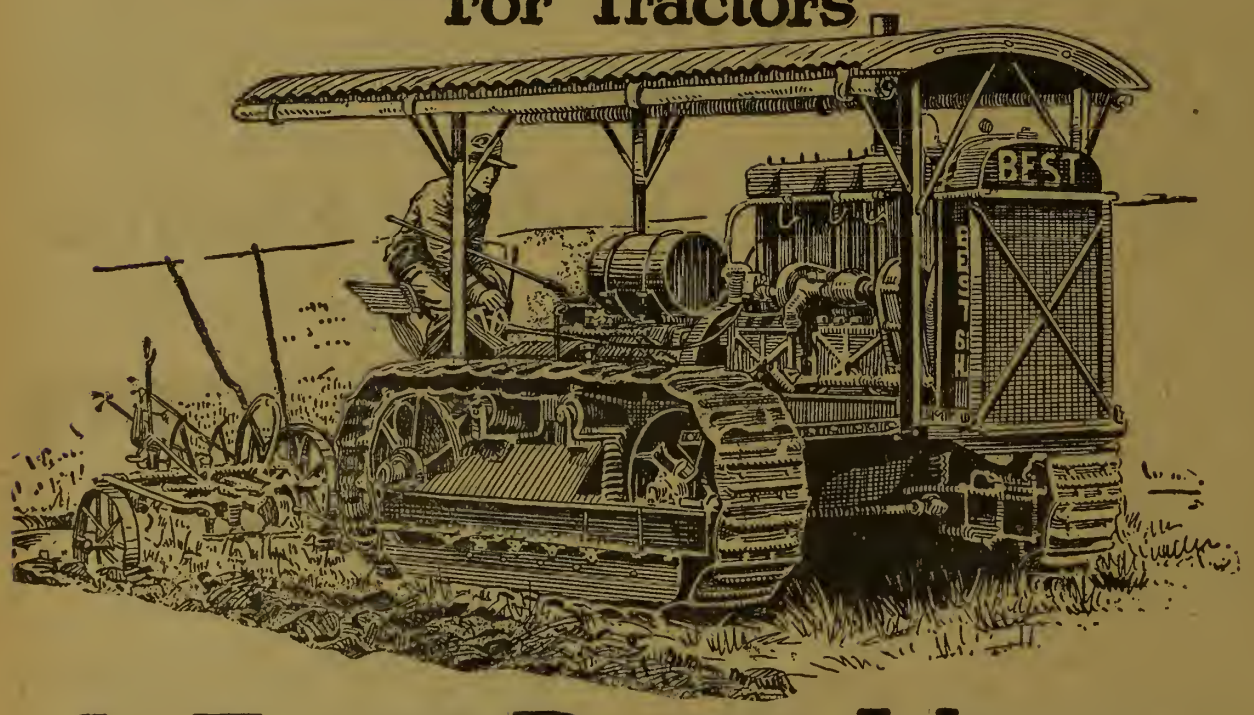
I am a veteran of the Spanish-American war and have just found out that there is a law exempting me from paying taxes. I notified the tax collector but he informs me that it is necessary that I make an affidavit to this effect in March of each year with the assessor. Am I obliged to pay this year's taxes?—Subscriber, Sawtelle.

Property to the amount of $1,000 of every resident of this state who has served in the army, navy, marine corps or revenue marine service of the United States in time of war and received an honorable discharge therefrom, or if he has not such property, then so much of the property of the wife of such person as shall be necessary to equal said amount, and also the property to the amount of $1,000 of the widow or widowed mother, resident in this state, of every person who has so served and died either during his term of service or after receiving honorable discharge therefrom, and property to said amount of pensioned widows, fathers and mothers resident in this state of such persons so serving, is exempt from taxation provided that this exemption shall not apply to any person owning property in the value of $5,000 or more, or where such wife owns property to the value of $5,000 or more, nor shall the exemption apply to any person who is not a legal resident of the state. Every person claiming this exemption must appear before the assessor and subscribe a form of affidavit prescribed by the state board of equalization to obtain his exemption and give such other or additional proof as the assessor may require. Failure to make this affidavit or furnish this evidence between the first Monday in March and the first Monday in July of each year shall be deemed and treated as a waiver of such exemption. This law has been in effect since the adoption of the amendment to the constitution in October of 1911. The code section enforces the provision of the constitution and was adopted in 1915. The various wars, veterans of which are entitled to exemption, are specifically set forth in the act and embrace the various wars so termed of the nation as well as numerous specific Indian campaigns. You will, therefore, have to pay your taxes for this year, but it might be possible that you could apply to the board of supervisors for their return.

HYATT

ROLLER BEARINGS

For Tractors



As Tractor Design Advances

The best knowledge of how to build a better tractor comes from actually building tractors and having their dependability proved year after year in actual farm work.

Whenever a manufacturer, after years of experience in tractor building, puts the unequaled value of that experience into a new and better tractor, the decision to use Hyatt Bearings is practically unanimous.

Time has proved that for the better construction of tractors, plows, separators, grain binders, wind-mills, feed grinders, and all agricultural machinery, Hyatt Bearings should be used.

FORMATION OF NEW HIGH SCHOOL DISTRICT

By Louis B. Stanton

What is the procedure to form a new bigh school district from a part of another district?

Between the first day of October and the tenth day of February of any year, parents or guardians of at least 15 children between the ages of five and 17 as shown by the petition, all of whom are residents of such proposed new district and reside at a greater distance than two miles by a traveled road from the public school house in the district in which such parents or guardians reside, may present a petition to the superintendent of schools setting forth the boundaries of the district asked for, provided that the provision requiring that the petitioners reside more than two miles from school house may be dispensed with when the petition shall be signed by parents and guardians of 50 or more children between the ages of five and 17, residents of a district containing more than 200 children in average daily attendance in the elementary schools of said district. If found sufficient, he shall set the same for hearing by the board, and file the petition accompanied by his recommendation and a notice containing a general statement of the purpose of the petition and of the boundaries of the proposed new district, and when and where the petition will be heard. At least ten days prior to hearing he shall take such steps as the law provides. The children residing in any newly formed district shall be permitted to attend the school in the district from which the newly formed district was constituted until the first day of July next succeeding the formation or change.

Is there any requirement that the proposed new district have the consent of the original district from which it shall be formed?

That is at the discretion of the board of supervisors.

Would the new district be liable for a part of the outstanding bond indebtedness on schools and lands?

The supervisors within 60 days after formation of district determine as to liabilities and improvements.

If a new district is formed from part of a district which is in a high school district, would the new district remain part of the high school district?

Whenever a new school district is formed from territory situated wholly within one high school district it continues a part of the high school district.

Will a bare majority of the votes cast win a school bond election?

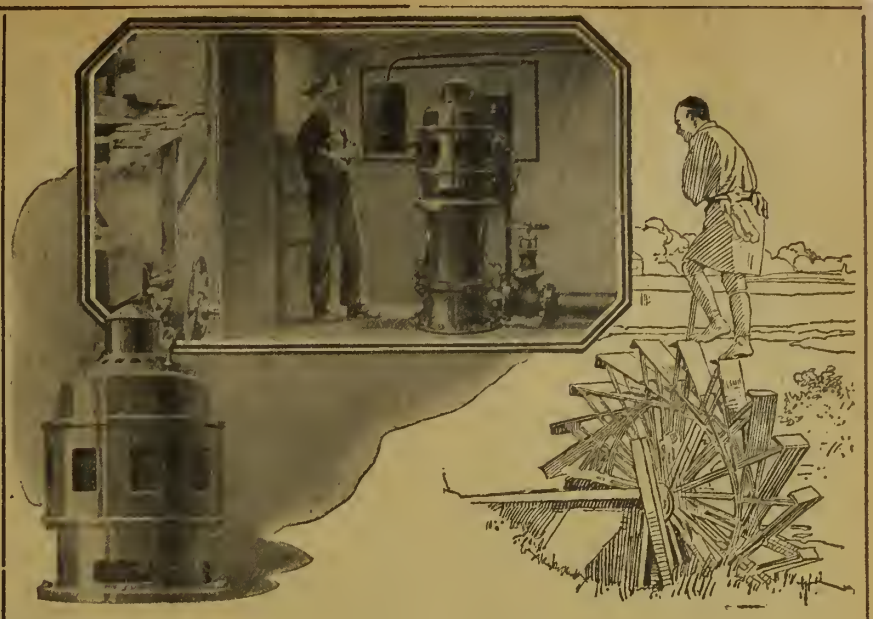
A two-thirds vote is necessary.

Must the people who sign the petition all be registered voters?

No, but they must be guardians or heads of families whose children are residents within the district.

A KNOWLEDGE OF WEEDS

"In order successfully to cope with the weed problem, a knowledge of the life history and habits is most essential," says Director of Agriculture Hecke. "While an 'annual' may be completely eradicated in a given locality by destroying it before it matures and perfects its seeds, a 'perennial' may not. Persistent cultivation may destroy thousands of tiny seedling weeds, but it is not always possible to devote the necessary time and labor. Certain chemicals have been recommended from time to time as efficacious weed destroyers, but many have their own peculiar disadvantages. Plants of the thistle variety may be propagated anew through a small fragment of the root, each capable of producing another plant. The great vitality and resistance of our common weed seeds is becoming more generally known, and most of them in their horny seed coats lie dormant in the moist soil until some action brings them near enough to the surface to receive the benefit of the warm sun and air which encourage germination. Experiments in England tend to show that weed seeds buried for periods as long as 60 years are still viable and will germinate upon being brought to the surface."



Form C Single Phase Motor
25 Horsepower

One Manpower — 1-6 HP.

Pumping 1000 Gallons Per Minute

This installation of a Vertical G. E. Motor connected to a Deep-Well Turbine Pump is operating at 1150 R. P. M. and pumps 1000 gallons per minute from a well 50 feet deep and 12 inches in diameter.

This one pump installed on a ranch at Santa Clara, Calif., is of ample capacity to irrigate 40 acres of prunes and in fact could easily supply 50 to 60 acres.

When selecting motors it is always well to remember cost is not price in the beginning, but cost in the long run.

California at the International

By R. P. Royce

THE International Livestock Exposition, held each year at Chicago, is ranked as the greatest livestock show of the world, and the twentieth exposition just closed was conceded to be the greatest show ever held.

The above facts were given to indicate to those not familiar with the Chicago show the importance of the event in the livestock world and to make plainer the splendid record established by California exhibitors.

For years that great show attracted the best of the world's cattle, sheep, hogs and horses, with no thought of what might be produced on the Pacific Coast. California simply was not figured as a source of superior livestock. In 1916 the University of California sent back an exhibit, small in numbers but of a quality that is still talked about, and the success of the university's exhibit was almost like a bomb. The Cornbelt rubbed its eyes. Here were steers and wethers that had never tasted corn, that won premier honors. "Oh, well," the old timers said, "accidents will happen, and the California stuff is just an accident and we probably won't hear of them again." But they were wrong in their calculations. No exhibit was sent East in 1917, but in 1918 the university showed the champion Shorthorn steer and landed other top awards. This year when the show opened the old timers did not forget, but asked, "What is California showing?" In three years California livestock has won a commanding position at the "world's greatest show" and is counted a factor of the first importance.

Before the judging was started Monday, it was generally conceded that California would have the grand champion in the fat classes—the most coveted award of the show—but when the judging was completed California's candidate was out of the running, but another entry was reserve grand champion and some of the other high awards were hanging over the California stalls. Here is the story:

University Jock 3d, a pure bred senior yearling Angus steer, bred and developed by the university and a full brother to the 1916 reserve grand champion, was sent to the top of a strong class.

Over on the other side of the great arena, California Prime Duke, a pure bred junior yearling Hereford steer and a half brother to the 1916 grand champion, being by the same sire, was shown into first place. Down at one end California Grizzly, a blue-grey Shorthorn-Angus cross bred junior yearling that was in the money last year and a half brother to the 1918 champion Shorthorn, was held in third place in class. A little later California Perfect Lady, the hope of California and the pick of the talent for grand championship, a cross bred (Shorthorn-Angus) senior heifer calf, came forward.

California Perfect Lady was generally admitted to be one of the most remarkable animals ever seen in this country, of faultless lines and covered so thickly and smoothly, presented in the acme of bloom by that master fitter Alec McDonald, with all the quality and style that could be asked, she was regarded as a certain winner. But the English judge, J. J. Cridlon, put her in third place and never moved her. The two calves placed above her, while good, in no way measured up to her. The winner was bare of rib and the second, while thicker than the first, was plain on top and not smoothly covered.

Post explanations of the judge were to the effect that she suffered on account of her sex—an explanation that failed to satisfy.

With their best chance gone, the big question in the minds of the California contingent was how the cards would fall with the other entries.

California Majestic, a pure bred senior Shorthorn calf, full brother to California Marvel, the 1918 champion Shorthorn steer, and to California Model, the bull that holds the Coast price record, was an easy winner and his stable mate of similar age, University Jock 4th, full brother to University Jock 3d, downed a strong lot of youngsters.

Up to that time California showed six times and won four firsts and two thirds. In the winnowing out of the breed champions, University Jock 3d beat his younger brother for the Angus championship. A Kansas senior yearling was made Hereford champion; an Ohio junior calf was Shorthorn champion and an Iowa junior calf, a grade Hereford, was champion of the grades and crosses.

Next came the champions by ages. University Jock 3d was champion yearling and the grade Iowa calf was champion calf. The two then met for the final battle. The thickness of covering of the university yearling was not sufficient in the mind of the judge to put him above the calf with the smoother tail head. The calf was made grand champion and California, by the closest sort of a margin had to be content with reserve.

Up in the sheep ring the Scotch shepherd, George Phillips, was going down the line in the wether classes, and when the smoke cleared he came out smiling with a pocket full of ribbons covering the following awards: First prize Shropshire wether lamb; first, second and third Hampshire wether lambs; first prize pen of Hampshire lambs; first, second and fourth Southdown lambs; first pen of Southdown lambs and champion Southdown wether; first, second and third grade lambs and first pen of grade lambs; third prize yearling grade wether and third pen of grade yearlings. In all classes the strongest sort of competition was met.

In the barrow show California barrows were making a strong exhibit. The university had entries in several breeds, and M. & A. L. Bassett, pioneer Poland China breeders of Hanford, showed in their breed classes. The exhibit sent forward by the Bassetts represents the first time that any California breeder has entered at Chicago. The Bassett and the university entries were highly commended by the Eastern hog men.

The university's senior Duroc barrow was seventh in a large class and the pen of three was placed second. In the junior class the university was second in the single and pen classes.

The Bassett barrows stood fourth and fifth in class and second in the pen division. The university Poland June yearling was fifth in class and the pen was fourth.

In passing it may be said that the barrow show was counted the strongest show ever made in America.

After the showing made by California livestock in the fat classes interest very naturally centered on what would happen when Little Sweetheart, the two year old Shorthorn heifer shown by T. S. Glide of Davis without defeat at Sacramento, Los Angeles, San Francisco and Portland, measured strength with the best Shorthorn females of the United States and Canada. This is what happened: Little Sweetheart won her class, was made senior champion and later grand champion. In order to reach her final rating it was necessary that she defeat the champions of all the big Eastern shows, but she apparently had as little trouble turning the trick among the elite of the Shorthorn world as she had in her native state. Little Sweetheart was bred by the Ormondale Company, Redwood City. She was sired by Golden Goods Jr., the Ormondale herd bull, and her dam is Sweetheart, a cow bred in Washington. She was purchased by Mr. Glide and was developed by Billy Robertson, who handles the Hillcrest herd.

This is occasion for congratulations to Mr. Glide and is added evidence of the possibilities of the Pacific Coast as a source of the highest class breeding stock.

All in all, the 1919 International was the greatest show yet held and California livestock played a very conspicuous and spectacular role, at times holding the attention of thousands.

Not the least, by any means, of the honors that fell to California was winning the Clay-Robinson special for the best five steers, wethers and barrows owned by an agricultural college.

In competition with ten or more of the leading institutions of the country the exhibit made by the animal husbandry department of the University was awarded that decision. In making the award on the steers the judge

Prince Walker Cornucopia

The Highest Record Son of Prince Gelsche Walker

His dam ALBA SADIE CORNUCOPIA CREETA has just completed official records of 36.26 pounds butter from 516.7 pounds milk in seven days. Her previous records were as follows:

At seven years—	
Milk 338 days	13,849.40
Butter	866.23
At six years—	
Butter seven days	34.13
Milk	532.40
At five years—	
Butter seven days	28.85

She is a daughter of Sir Sadie Cornucopia, son of the first 30 pound cow, Sadie Vale Concordia. Over 60 of our best females are bred to PRINCE WALKER CORNUCOPIA, and he will be given the fullest opportunity in this herd. Put one of his young sons at the head of your herd.

We Can Spare One of Our Service Bulls

AND OFFER

KING WINNIE SEGIS WALKER, (No. 244437), born November 16th, 1917. (Just in his prime.)

SIRE—"KING WINNIE," a show bull, whose dam has produced 31,034 pounds of milk in a year and made over 1,200 pounds of butter in a year.

DAM—"ALLENVAIL SEGIS WALKER" 7 day record—at 4½ years old—447.90 pounds of milk and 22.71 pounds butter.

She is a daughter of "KING WALKER SEGIS"—28 A. R. O. daughters—and her dam is a granddaughter of two of the greatest bulls of the breed, "KING SEGIS" and "HENGERVELD DE KOL." As an individual this bull will satisfy anyone. He is straight and right in every way.

If you are in need of a service bull for either a grade or purebred herd, do not overlook writing for photo, price and extended pedigree. We are offering him very reasonably.

WHO WILL BUY

Giant Bob? the greatest Poland China Boar on the Pacific Coast.

In January I will disperse my entire herd of big type Poland Chinas. Bred sows and gilts—open gilts—few boars. *Giant Bob*, the 1919 grand champion, also sells. Write for catalog. Sale date announced later.

Chas. Gatewood **Fresno, Cal.**

declared them to be a credit to any exhibitor and paid a high compliment to their uniform quality and superior fitting.

To Professors Gordon H. True and J. S. Thompson, to Alec McDonald and George Phillips, to M. and A. L. Bassett and T. S. Glide should be given great credit for carrying the message to the East that California is a great livestock state and for their courage in going to meet the strongest competition on new ground.

ESTABLISHING HEREFORD AND PERCHERON HERDS

Romeo Jacks of Monterey, one of the prominent cattlemen of this state, has purchased the foundation for a high class Hereford herd. Jacks secured about 75 well bred females from a number of the leading breeders of the Middle West.

Jacks has also purchased a number of very high class Percheron horses, including a two year old son of Lycee. This colt, secured from A. L. Robinson of Pekin, Illinois, is said to be one of the top colts of recent years, and cost $5,000.

Jacks bought two weanling fillies and a yearling filly from Robinson and several mares from Frank Harris, Tremont, Illinois.

If you have MONEY to save, you will find it to your advantage to write for our folder that tells you all about banking by mail.

TAGUS SALE

From the number of inquiries made for catalogues for the Tagus Ranch sale at Tulare on Tuesday and Wednesday, December 16 and 17, the Merritt-Bowers Company is going to have about the best attended public sale of the year. The diversity of the offering is expected to bring many buyers interested in their particular line.

The implement and horse sale on the first day is a drawing card that will attract a great crowd, as the kind of implements and the manner in which they are maintained on Tagus Ranch are of widespread knowledge. The useful lot of horses and mules, wagons and harness will bring another set of interested buyers, and the 15 head of Percheron, Belgian and Shire stallions and mares will be practically a sale in themselves.

The Shorthorn offering on Wednesday is expected to draw on a wide territory for buyers of the Scotch tops, the greater number of which are bred, and many have calves at foot. There are 100 Shorthorns. The milking Shorthorns will receive spirited bidding by a number of breeders who say there is a greater demand than supply of this kind of Shorthorn. Owing to the fact that the 30 head of two year old Hereford bulls are unregistered, they will furnish bidding for range cattle men.

Ord L. Leachman of Sacramento, who is handling the auction, says that he has had many requests for catalogues from Arizona, Nevada and Oregon as well as all parts of California.

MORRIS SALE PROVES ATTRACTIVE

Indications are that there will be an unusually large number of Holstein enthusiasts on hand at the A. W. Morris & Sons sale of registered Holsteins at state fair grounds, Sacramento, December 18. This is the first time that buyers have had a chance to buy females from the best families in the Morris herd in such large numbers, and as cows from two to five years old are the rule in this sale and they are practically all bred to the chief herd bulls in the Morris herd, it means that scores of breeders will take advantage of the occasion to try and secure some of them. Dairymen who want a Morris bull of service age within the next few months will need to get him in this sale, as every one of service age in the herd has been consigned. The latest addition to the bull entries is the two year old King Clorinda Sadie Vale, who has an average of 31.95 pounds butter in seven days for his seven nearest dams. The sale will be managed by California Breeders Sales and Pedigree Company, with Col. Ben A. Rhoades on the block, Col. Geo. W. Bell in the ring and C. L. Hughes in the box.

STRIKES OUT SEVEN-DAY TEST

At a recent meeting of the board of directors of the American Jersey Cattle Club it was decided to strike out the rule that provides for the making of seven day Jersey records of milk and butter fat production. Although this rule has been included in the test rules of the A. J. C. C., it has been seldom used in recent years and was considered an obsolete and useless form of test work from the standpoint of Jersey breeders.

A new ruling admitting special qualifications of animals in the 305 day class was added and this will open the way for the making of records that will give a cow more rest between tests than the 365 day test.

At the present time a campaign is under way to have 10,000 Jersey cows on test. This camapign was inaugurated several months ago and has resulted in the testing of many more Jerseys. There are now more than 4,000 Jerseys on test and it is expected that the 5,000 mark will shortly be passed.

Thirteen thousand official year's records have been completed by Jerseys. The average production of these records is 7,932 pounds milk and 424 pounds fat. This includes cows of all ages from yearlings to aged animals, 17, 18 and 19 years old. The average production of 4,500 aged Jerseys, cows five years and over, is 9,218 pounds milk and 487 pounds fat.

The present San Mateo County grand jury contains 13 women.

IN THE SALE

A 30 lb. cow that made over 25,000 lbs. milk and 1,081 lbs. butter in one year, bred to King Morco Alcartra, son of Tilly Alcartra.

A 29 lb. daughter of Korndyke Queen De Kol's Prince, bred to King Morco Alcartra. She is the dam of Miss Gelsche Walker Korndyke, former state record two year old.

A 28 lb. 4 year old daughter of a 33 lb. cow that made over 1000 lbs. butter in one year. This cow herself recently completed a record of over 22,000 lbs. milk and 908 lbs. butter in one year.

A 27 lb. granddaughter of Colantha Johanna Lad bred to King Aaggie Mead, full brother to Aggie Acme of Riverside 2nd, the world's yearly official record cow.

A 26 lb. daughter of a 30 lb. cow that made over 1000 lbs. butter in one year, her dam also a 1000 lb. cow. Bred to Sir Aaggie De Kol Mead, son of the world's record heifer Miss Valley Mead De Kol Walker.

A daughter of King Meade of Riverside that made over 750 lbs. butter in one year as a two year old. She is fresh.

A daughter of King of the Pontiacs that made over 700 lbs. butter in one year as a two year old. Bred to Sir Aaggie De Kol Mead.

A daughter of the great Aaggie Acme of Riverside. Bred to Sir Aaggie De Kol Mead.

A 20 lb. three year old daughter of Prince Gelsche Walker out of a 28 lb. four year old.

A 21 lb. three year old granddaughter of Aralia De Kol bred to King Aaggie Mead.

A 22 lb., three year old granddaughter of Aralia De Kol out of a daughter of Riverside Sadie De Kol Burke. Bred to King Aaggie Mead.

A 21 lb. three year old granddaughter of Colantha Johanna Lad. Bred to King Morco Alcartra.

A daughter of Prince Gelsche Walker out of a 1000 lb. dam that has a 30 pound 1000 pound daughter.

A granddaughter of Pontiac Korndyke bred to King Aaggie Mead.

A granddaughter of Aralia De Kol out of a 26 lb. three year old daughter of a 30 lb. three year old.

A daughter of Segis Pontiac De Kol Burke out of a 31 lb. dam. Bred to King Aaggie Mead.

A granddaughter of King of the Pontiacs, with 850 lbs. butter in one year as a 3 year old. Bred to King Morco Alcartra.

A first calf daughter of a cow that made over 27,000 lbs. milk and 1093 lbs. butter in one year.

A 22 lb. daughter of Albina Butter Boy, sire of the 40 lb. cow Albina Josie. Bred to Sir Aaggie De Kol Mead.

A daughter of Changeling Butter Boy out of a 26 lb. daughter of Tidy Abbekerk Prince. Bred to Sir Aaggie De Kol Mead.

A granddaughter of Aralia De Kol out of a 900 lb. half sister to Tilly Alcartra. Bred to Sir Aaggie De Kol Mead.

A daughter of Prince Gelsche Walker with a record of 701 lbs. butter in 305 days as a 3 year old. Now fresh.

A three quarter sister to the world's record heifer Miss Valley Mead De Kol Walker. Bred to Sir Aaggie De Kol Mead.

A daughter of Segis Pontiac De Kol Burke out of a 26 lb. daughter of King Meade of Riverside that made 644 lbs. butter in one year as a 2 year old. Bred to King Morco Alcartra.

Two daughters of a cow that made over 21,000 lbs. milk and over 925 lbs. butter in one year.

A daughter of Segis Pontiac De Kol Burke out of a dam that made over 19,000 lbs. milk and over 870 lbs. butter in one year.

THIS OPPORTUNITY COMES ONLY ONCE

The 1000 lb. Sale

70---High Class Yearly Record Holsteins---70

at Public Auction for A. W. Morris & Sons Corporation

State Fair Grounds Sacramento, Cal. Thursday, December 18, 1919

In the development of a herd of registered yearly record Holsteins that is unequalled in the world, A. W. Morris & Sons Corporation have for years worked to a definite end with certain families within their herd, and have to the present time kept a very large percentage of the females of those families in their own herd.

Fire Compels Changes in Plans

The fire in November which destroyed cow barn, silos, and feed, makes it imperative that this great herd be reduced, and the Morris firm must part with a wonderful group of young cows bred in the strongest lines within their herd. This forced sale affords a buying opportunity that in all probability will never again be equalled in sales from this herd.

Sale Should Be the Making of Many Herds

There are scores of comparatively small herds in California that would immediately go to the front by the addition of some of the wonderfully bred females in this sale, in calf as they are to three of the greatest bulls Morris has ever owned. And for the man who wants to buy the sort of foundation stock that will drop calves that will sell among the tops in any sale ring, or be the sort of breeding animals upon which to build the highest class herd, the opportunity in this sale is equally great.

Every female in this offering has a 1000 lb. yearly butter record, is out of a 1000 lb. dam, is by a 1000 lb. sire, or is bred to a 1000 lb. bull.

No sale of registered Holsteins ever held before has closely approached this one in respect to 1000 lb. yearly record breeding, and the opportunity is therefore unprecedented for the purchase of animals with yearly record backing that is being demanded more and more by discriminating buyers.

Every female in the sale is of milking age, and is either fresh or bred to a 1000 lb., a 1100 lb., or a 1300 lb. bull.

The females in this sale are bred to three of the most richly bred yearly record bulls of the breed: SIR AAGGIE DE KOL MEAD, son of the 1100 lb. junior 3 year old, Miss Valley Mead De Kol Walker; KING MORCO ALCARTRA, son of the greatest dairy cow in the world, Tilly Alcartra; KING AAGGIE MEAD, full brother to Aaggie Acme of Riverside 2nd, who holds the world's strictly official yearly butter record.

Every bull of service age in the Morris herd, except of course the herd bulls, is in this sale

There are only ten young bulls of service age in the Morris herd, so closely have private sales kept the surplus down, and every one will be in this sale. It will then be well for every breeder and dairyman who wants one of the yearly record bulls from this herd, this year, to be on hand sale day.

An Added Attraction

The richly bred 2 year old bull KING CLORINDA SADIE VALE will be sold. He is sired by King Korndyke Sadie Vale 27th, and out of K. S. P. Clorinda, the former state record senior 3 year old daughter of King Segis Pontiac. She made 29.39 lbs. butter from 621 lbs. milk in 7 days, and is out of a 28.31 lb. daughter of King of the Pontiacs. This bull is an excellent individual and has an average of 31.95 lbs. butter in 7 days for his 7 nearest dams.

Every animal in this sale is positively guaranteed to be a breeder. No animal is tuberculin tested

Corn Belt Herd Hampshires

At head of our great herd of Hampshires is Black Beauty, by Young Senator. Black Beauty won the blue ribbon at the big Los Angeles show. He is by same sire as the sensational "Big 4" junior yearling sows seen at Los Angeles, one of them, Florene 2d, being grand champion of the show.

Our lineup of brood sows is in keeping with the great sire in service. Young stock for sale. Letters promptly answered.

Roy E. Fisher **Lincoln, Neb.**

The Poplars----Hampshire Headquarters

Our reserve grand champion sow Wavelet at the big Los Angeles show is the mother of 8 little Waveiets—a flourishing family. We won 1st on boar and 3 sows bred by exhibitor, also 3 other herd prizes. We were in the money on aged boar, twice on junior yearling boar, and once next the top on junior boar pig. All young stock the get of our great boar, The Harvester Again. Write us your wants.

The Shrinkage in Shipping

The shrinkage in the weight of cattle in transit to market is the difference between the weight of the animals at the point of origin and their weight on arrival at destination.

A writer in Field and Farm explains:

The net shrinkage is the difference in the weight at the point of origin and the weight of the animals when sold at the market after taking a fill. The shrinkage of cattle in transit is such a variable factor that no one can say definitely how much it will be during a journey, but by the use of very large numbers of cattle an average shrinkage will be obtained which may be used as a basis for estimating the amount of shrinkage on cattle shipped under similar conditions. The net shrinkage ranges all the way from 15 to 75 pounds a head, or from 2.14 to seven per cent, depending upon the length of time and other conditions. The time that cattle are in transit varies from less than 24 hours to more than 72 hours. The normal shrinkage may be regarded as from three to six per cent of live weight. The extent of the shrinkage depends upon various factors, among which are the conditions at the time of shipping and the treatment during the drive to the loading pens; the length of time the cattle were held without feed and water before being loaded; the nature of the fill before loading—the greater losses occurring when this consists of succulent grass, beet pulp or silage; the climatic and weather conditions at the time of loading, while in transit and at the market; the character of the run to market, delays on the road—greater shrinkage naturally being caused by slow, rough runs; the time of arrival at market. If the cattle arrive just before being sold the fill is light. Cattle that are shipped a long distance and arrive at market during the night do not fill well. If they arrive the afternoon before or about daylight of the same day they generally take a good fill. An exceedingly large fill at market is not desired, as it will detract from the selling price. The shrinkage of cattle varies in direct proportion to their live weight when conditions are the same and all other factors are equal. The shrinkage on cattle is proportionately smaller for each 12 hours they are in transit after the first 24 hour period is passed. The difference between the shrinkage of cows and steers is not so great as is ordinarily supposed. Steers will usually shrink somewhat less than cows of the same weight. The shinkage on calves seems small, but under normal conditions it holds about the same proportion to their weight as is found with grown cattle. The shrinkage of range cattle in transit over 70 hours during a normal year is from five to six per cent of their normal live weight. If they are in transit 36 hours or less the shrinkage will range from three to four per cent of their live weight. The shrinkage of fed cattle does not differ greatly from that of range cattle for equal periods of time. Cattle fed on silage have a large gross shrinkage, but usually fill so well at market that the net shrinkage is small. Pulp fed cattle shrink more in transit than any other class and also present a greater net shrinkage. For a long journey the common method of unloading for rest, feed and water is to be preferred to the use of feed and water cars. Cattle should be weighed before shipping wherever practicable, since a comparison of this weight with the sale weight will show the net shrinkage. Moreover this weight at point of origin may be of material benefit to the shipper in case of a wreck or a very poor run to market and save delay in having claims adjusted

Dispersal Sale of Percherons

The sale of registered Percherons owned by S. Wade and Son, at Le Grande, Oregon, resulted in the 35 head of Percherons selling for $19,675. or an average of $418. Col. Harry C. Cranke, Nez Perce, Idaho, did the selling, and his work was most effective and satisfactory. The attendance was good and a very large per cent were bidders. The topper, Eunice 109608. foaled in June, 1914, was a first prize winner at Oregon state fair and also winner of the blues at several county fairs in Oregon. She was bought by Carl Whittemore for $1,000. Other sales were:

2, Pershing. John C. Baxter, Joseph, Oregon, $900.
3, Dudley. Carl Whittemore, Joseph, $550.
5, Bergan. E. M. Pratt, Baker, $250.

34, mare colt. Baxter, $250.
35, stallion colt. Floyd McKinnon, Le Grande, $125.
36, stallion colt. Townley, $110.

DEMAND FOR RABBIT SKINS

In recent years several kinds of fur, formerly of so little value as to offer no inducement to the trapper, have been raised in price, and consequently collecting them has been made profitable. Rabbit pelts, which are extensively used by hat makers, are among these products. One Eastern concern has announced that it will need 10,000,000 rabbit skins during 1919 and 1920, and it desires as far as possible to secure them from American sources. This is an indication of a market which should interest many a farmer boy. This fall and winter dried, cased rabbit skins will probably bring a reasonably good return. They are sold by the pound which will contain seven or eight skins. Many farm boys can readily acquire, in the course of the winter, large numbers of skins which will net them a tidy sum and, in addition, they will have the pleasure of trapping experience. The United States department of agriculture will supply any inquirer with the names and addresses of possible purchasers of rabbit skins and other pelts.

From three to five cars of hay are being shipped daily from Pixley, Tulare County, to Los Angeles, over 1,000 tons having been shipped. The Tipton and Earlimart districts are also shipping large quantities of hay.

Artois, Colusa County, has doubled its rice crop each year for four years

Carnation Segis Colantha, the fine two year old heifer purchased in the March Guaranty Sale by T. J. Gist & Sons, Tulare, from Carnation Stock Farms, Seattle, recently dropped a fine bull calf by the $106,000 bull Carnation King Sylvia, and placed on official test made the very creditable record of 17.81 pounds butter in seven days. She is unquestionably a heifer of great promise and her son should develop into a bull of real herd heading qualifications.

Hartog Gerben Hengerveld, a four year old Holstein heifer owned by Carnation Stock Farms, Seattle, recently completed an official record of 30.62 pounds butter from 726 pounds milk in seven days. She is sired by Ollie Johanna Sir Fayne, and is therefore half sister to the 39.74 pound four year old owned by W. J. Higdon, Tulare.

The twelfth daughter of Matador Segis Walker to freshen in the Carnation Stock Farms herd at Seattle has recently completed an official record of 23.24 pounds butter in seven days at the age of two years four months. The daughters of this sire are a remarkable lot of individuals and are showing uniformly high production as they freshen.

On January 30 C. F. Mohnike, Angiola, will disperse his herd of about 50 registered Holsteins and 25 very high grade Holsteins. The herd is an exceptionally attractive one and is headed by a son of a 32 pound cow. The sale will be under the management of California Breeders Sales and Pedigree Company, Sacramento.

Idleaze Pontiac Lass, the great 42 pound four year old daughter of King of the Pontiacs, dropped a bull calf in July by Champion Echo Sylvia Pontiac, son of May Echo Sylvia, and his average of 857.9 pounds milk and 41.74 pounds butter is possibly not exceeded by any bull yet born within the breed. The dam and her wonderfully bred son are owned by Carnation Stock Farms, Seattle.

The Hereford breeders are already

McCune Has the Right Type

in Poland Chinas—along with type is found size, smoothness and quality —all necessary in the production of high class breeding animals. When you buy a McCune Poland China you get these outstanding qualities along with individual merit.

MERRITT-BOWERS CO., TULARE, CAL.

Ord L. Leachman, Auctioneer and Sales Mgr., Sacramento

busy with plans for their entries in the spring sale to be held the last week in February. It is planned to sell about 40 bulls and about 40 females in this sale, and especial effort is going to be made to offer a high class lot of bulls suitable for range purposes. The sale will be under the auspices of Pacific Coast Hereford Cattle Breeders Association, of which J. I. Cazier, Wells, Nevada, is president, and J. A. Bunting, Mission San Jose, secretary. C. L. Hughes, Sacramento, will manage the sale.

A very select small herd of registered and grade Holsteins will be dispersed at public auction on Saturday, December 20, by J. E. Walker on his farm near Winton, Merced County. The sale will be managed by C. L. Hughes, Sacramento, with Col. Ben A. Rhoades, Los Angeles, on the block.

Preliminary arrangements are being made for the Holstein Guaranty Sale at Sacramento late in March, and reports indicate an offering that will still further increase the fame of these feature sales. It seems safe to predict that the Holstein breeders are going to completely surpass their previous efforts in the matter of offering high record breeding and high class individuals.

Geo. W. Bell, Tulare, auctioneer of pure bred livestock, and who handled so successfully the recent sale of Poland Chinas for Wm. Bernstein of Hanford, reports the booking of a number of sales for the coming year and that the interest in pure bred livestock is steadily increasing.

The boys of the Inglewood union high school boys' pig club have just purchased from Geo. A. Stingle, Lark Meadow Ranch, El Monte, seven pure bred Berkshire bred gilts and four open gilts. They started out to get grade pigs, but concluded that if there was money in grades there was more money in pure breds. They will hold an auction sale of pure bred Berkshires in May, when they expect to have about 40 head to sell. Mr. Stingle is donating a pure bred gilt to the boy that makes the best record with his hog. The Inglewood union high school also bought an Ames Rival brood sow and a Masterpiece boar from the same herd.

At the sale of Herefords held during the week of the American Royal Livestock Show, Kansas City, R. C. Jacks of Monterey was one of the liberal buyers. Included in his selections was a son of Paragon 12th and a daughter of Bocaldo 6th at $2,000, a daughter of Beau Picture at $1,400, a son of Gay Lad 9th at $1,150 and a daughter of Bright Stanway at $1,000. At private treaty he secured practically the entire herd of O. F. Wilson & Son, Burlington Junction, Missouri.

One of the greatest Holstein cow counties of the United States is Waukesha, Wisconsin. Besides pure breds the county has a vast number of grade Holsteins which are fifteen-sixteenths pure bred. Owners of these cattle are reducing their stock and centering on registered stock. The J. A. Roberts Stock Farms of Oconomowc have engaged part of their activities in distributing five weeks heifer calves from this stock to dairies in all parts of the country. A uniform price is made on these. In order to secure more general distribution the Roberts Farms have established a western branch at Hollywood in this state.

Fresno is building a million dollar high school.

HOPKINS BUYS HIGH CLASS SHORTHORNS

C. Harold Hopkins of Woodland, who is establishing a select herd of Shorthorns, is now in the East for the purpose of securing a number of high class females. Hopkins attended the great sale held at Anoka Farms, Waukesha, Wisconsin, and purchased the richly bred heifer Anoka Gloster 5th, a daughter of the imported bull Rusper Champion, and out of a Duchess of Gloster dam.

Hopkins also attended the International sale and was a bidder on the choicer lots. He selected the white senior yearling heifer Silver Bud, a daughter of Maxwalton Stamp 2d and out of a daughter of Avondale, for $3,500; Collynie Missie 2d, a roan senior heifer calf by Regal Stamp and out of a Marr Missie dam, at $1,550, and Lancaster Lady, a white two year old by Cottonwood Sultan and out of a Mary Anne of Lancaster dam by Burnbrae Sultan.

Hopkins expects to purchase several mares before returning. Hopkins has recently purchased a 500 acre tract just west of the University Farm, Davis, and plans to maintain his herd at that location.

NEW HEREFORD BULL FOR BARNGROVER

H. M. Barngrover, San Jose, proprietor of the Veramont Hereford herd, is now in the East visiting the leading herds. Barngrover attended the American Royal Livestock Show at Kansas City and the International at Chicago. While at Chicago he purchased from J. C. Robinson of Evansville, Wisconsin, a seven months old bull calf sired by Bonnie Brae 8th and out of a Domino dam. A full sister to the Barngrover calf sold in the Taylor sale for $7,000.

Better Than a Thirty Pounder

Eldorado Winifred, 30.21 lbs. butter in 7 days as a junior four year old, owned by Alex Whaley, Tulare.

GUILFORD ELECTED SHROPSHIRE DIRECTOR

At the annual meeting of the Shropshire Record Association held at Chicago during the International, W. S. Guilford of the Butte City Ranch, Butte City, was elected to a directorship.

The election of Guilford was a well earned recognition of the services he has rendered the Shropshire breed on the Pacific Coast.

MOLASSES FOR STOCK

One of the helps of the livestock feeder which is being used more generally every day is the crude, or low grade, molasses from a sugar mill. The value of this feed has been found to be not only in the actual nutrition content, as indicated by the analysis, but because of its quality—not exactly succulency, but akin to that—which makes it an appetizer. Especially is it valuable where the cows are not permitted to run on pasture or where they are not permitted to exercise. The molasses acts both as a digester and tonic and takes the place of green feed which tends to keep the cows healthy and increases all their normal functions, such as the milk producing powers. Then, too, dairy cows which are confined in small areas often lose their appetites, and when they do milk production naturally drops off. By adding a little molasses to the ration they will regain their appetites and besides eat more than they did without the molasses, which of course increases their milk production.

Farmers in Kern and adjoining counties are fighting the proposal of the Miller & Lux estate to form an irrigation district.

The Tulare Holstein Sale

The offering of registered Holsteins at Tulare on November 25 was greeted by a crowd of buyers of very satisfactory size and the sale was entirely successful in spite of the fact that no catalogues were on hand, due to loss in the mails. The offering presented a wide spread in values, from choice individuals of substantial breeding down to plainly bred young stuff in very poor condition. The cattle were widely distributed among 20 buyers, and many good bargains were secured. The top of the sale was a three year old heifer consigned to J. P. Phillips, sold to R. L. Holmes for $900. The averages of the various consignments tell something of the differences in age, breeding and condition that influenced prices. Col. Ben A. Rhoades did his usual effective work on the block, with Col. Geo. W. Bell in excellent form in the ring. The sale was managed by California Breeders Sales and Pedigree Company, Sacramento, with C. L. Hughes in the box. Following is a summary of the various consignments, with names of buyers and prices paid:

Consigned by J. P. Phillips, Fresno

Lady Cristena Mechthilde, Mack L. Borrer, Tipton; $500.

Lady Mechthilde Gertrude Burke, R. L. Holmes, Modesto; $405.

Queen Nika Pietertje, R. L. Holmes, Modesto; $900.

Total, $1,805. Three head averaged $602.

Consigned by R. C. Sturgeon, Tulare

Lady Rue Alcartra, H. G. Ball, Tulare; $500.

Odette of Sleepy Hollow 2nd, J. A. Knight, Tipton; $455.

Total, $955. Two head averaged $478.

Consigned by W. J. Higdon, Tulare

Lady Joy Korndyke Hengerveld, W. W. Johnson, Tulare; $325.

Aaggie DeKol Acme Segis, R. L. Holmes, Modesto; $330.

Prilly Queen Meadmore Segis, H. G. Ball, Tulare; $440.

Leda Hartog Ormsby 2nd, H. G. Ball, Tulare; $660.

Aaggie Artis Fobes, W. W. Johnson, Tulare; $810.

Segis Ormsby Pietertje 2nd, H. G. Ball, Tulare, $400.

Model Rose Abbekerk America, Robt. T. Curtis & Son, Exeter; $725.

Total, $3,690. Seven head averaged $527.

Consigned by Post-Card Ranch, Corcoran.

Post-Card Princess Pearl, J. A. Knight, Tipton; $165.

Post-Card Pet, Frank Martin, Visalia; $165.

Alta Carnotha, J. A. Knight, Tipton; $180.

Princess Aralia Juliana, J. A. Knight, Tipton; $200.

Princess Pearl Nephele, J. A. Knight, Tipton; $375.

Maid Manona Pauline, J. A. Knight, Tipton; $150.

Charlotte Mercedes McKinley, Robt. T. Curtis & Son, Exeter; $200.

Queen DeKol Mary Wayne, A. Williams Jr., Fresno; $250.

Post-Card Queen Aileen, J. A. Knight, Tipton; $150.

Nancy Netherland of Twin Pine, H. E. Vogel, Fresno; $410.

Mechtchilde Ormsby 2nd, R. L. Holmes, Modesto; $525.

Floria Burke Hartog, R. L. Holmes, Modesto; $360.

Total, $3,130. Twelve head averaged $261.

Consigned by Alex Whaley, Tulare

Eldorado Helena, R. L. Holmes, Modesto; $105.

Eldorado Countess, J. A. Knight, Modesto; $200.

Rose Burke of Eldorado, Mack L. Borrer, Modesto; $270.

Eldorado Beryl, H. E. Spires, Carruthers; $3,000.

Helena King Segis, R. L. Holmes, Modesto; $335.

Lady Canary Zenobia, D. H. Storm, Tulare; $310.

Mennonite Maid, R. L. Holmes, Modesto; $290.

Total, $1,810. Seven head averaged $258.

Consigned by L. Y. Montgomery, Fresno

King DeKol Jetze Burke, W. A. Duncan, Tulare; $105.

Welch Pietertje, R. L. Holmes, Modesto; $255.

White Juliana DeKol, H. Halff, Tulare; $280.

Nancy Korndyke daughter, Frank Martin, Visalia; $110.

Oleander Burke, H. E. Spires, Carruthers; $260.

Canary Nancy Korndyke, H. E. Spires, Carruthers; $140.

Roma Canary 2nd, H. E. Spires, Carruthers; $100.

Not sold:

Romeanna Douwe, W. J. Higdon, Tulare; $390.

Dora Aconeth Korndyke, W. A. Duncan, Tulare; $120.

Nancy Canary, J. A. Knight, Tipton; $120.

Douwe Burke, H. E. Spires, Carruthers; $235.

Lassiejean Pietertje 2nd, H. Halff, Tulare; $225.

Duroc-Jerseys

Bred and raised under right conditions. Correct as to type and size.

D. C. Cummins & Son

VISALIA, CALIF.

CLOSING OUT

Public Auction Sale

Wednesday 10 A.M. **DEC. 17th**

Having sold my ranch and entered other business, I will sell to the highest bidders my entire herd of

REGISTERED O. I. C. SWINE

Together with stock, implements and miscellaneous articles. My ranch is

Two Miles South and 3-4 Miles West of Wasco Union High School

HOGS

Herd of hogs consists of 12 brood sows that have just weaned their fall litters. These sows are all proven breeders and have raised an average of eight pigs.

Nineteen gilts from 6 to 9 months old.

All selected from the spring litters.

The sows and oldest gilts will be bred to my new herd boar, recently purchased from Oregon.

One hundred pigs ranging from six weeks to three months old. Some dandy sow pigs in this lot.

One 8-months'-old boar; one 1-year-old boar; one 1½-year-old boar.

Certificates of Registration given with all sows, gilts and boars.

Pedigrees furnished with all young pigs where requested.

Any stock purchased by buyers from a distance will be crated and put F. O. B.

Terms Cash **Free Lunch at Noon**

JAS. LITTLE, Owner **Col. O. S. Grant, Auctioneer, Wasco**

The Pride-Prize-Profit-Breed

JERSEYS

If you never owned Jerseys—you've never received "paid in full" value for your feed bills. Jerseys are the most economical cows ever bred. They feed for their udder — not beef and bone.

They produce the richest quality of milk, a butter fat average of 5.37%. They thrive in the cold Northwest or hot Texas. Jerseys are truly the investment breed because they are the most adaptable and most economical.

Ask breeders for pedigrees and prices and let us send you some interesting facts about the money-making Jersey.

3 BULLS — No. 1 born Mar. 1, 1919. Sire, Our Noble Mayfair Hero. — **3 BULLS**

No. 2 born Oct 1, 1919. Sire our Kathie's Eminent. — All from high record cows in Arden herd — No. 3 born Dec. 20, 1918. Sire same as No. 2.

ARDEN DAIRY CERTIFIED. EL MONTE, CALIF.

When Writing Advertisers, Mention The Cultivator.

The Wonderful Qualities of Our Senior Herd Bull

United with those of his wonderful dam Gertie Abbekerk Maid (a twice 34 lb. cow and whose sire has 27 A.R.O. daughters) are exemplified in his sons and daughters

Not a loafer among them—loafers don't pay—his first ten daughters made 18 lbs. of butter in 7 days from 54.4 lbs. of milk. His sons are proving their ability to transmit these great production qualities to their get. We are offering young bulls at very reasonable prices. Purchase one of these bulls from a family of producers. You will not be disappointed.

Natural Growth the Test

There is slight question but that many livestock producers are inclined to overlook the importance of selecting their herd material on the basis of natural growth rather than upon the basis of forced development.

In the last analysis the great bulk of our pure bred livestock finds its way into the hands of large and small operators who have been convinced of the efficiency of better blood and who expect to cheapen their production costs and increase their net profits by the use of well bred sires and dams. To them the whole proposition is cold blooded and unless pure breds can justify themselves under practical conditions the general expansion of the industry will be retarded and values affected.

What the average man wants is breeding stock that proves its merit over plainer sorts without the need of too great assistance from the feeder. In other words, the average man does not care to invest in breeding stock that has been forced and crowded from birth, but, after a few experiences with pampered breeding material, he prefers to make his selection from herds where natural growth, along with other practical essentials, is found to highest degree.

In every herd will be found certain lines of breeding that are responsible for the better productions — young things that seem to grow away from the balance of the herd without being accorded any extra care. This superior natural growth constitutes one of the most valuable features that can be developed and herds or flocks that have been built around those lines of breeding invariably produce a class of material that seldom fails to make good under average conditions.

The writer does not in any way minimize the importance of proper feeding and care—any kind of livestock is entitled to both—but he feels that more breeders should recognize the practical importance of natural growth and make their selections with the idea in mind that quality, supplemented by good feeding and management, will result in raising the general standard and give added economic value to pure bred livestock and go far toward correcting the idea held by many that registered livestock lacks hardiness and tends to "go back" when handled under ordinary conditions. That idea from time to time bas been justified because not a few men who style themselves breeders seem to believe that because an animal happens to be sired by a registered sire and out of a registered dam it must he right regardless of whether the progenitors have been selected with due stress on natural growth. An inferior animal can very often be "fed out" until it appears to have exceptional size but it takes real inherent merit to demonstrate its superiority under ordinary methods of management.

There is another point that suggests itself in this connection—an animal loaded down with fat may have a number of faults obscured, but faulty conformation usually can be detected in animals in moderate condition—a fact that buyers should keep in mind when selecting herd material. — R. P. R.

New State Record in Higdon Herd

A great official record has been made by the registered Holstein heifer Ruby Pietertje of Forest Hill 2nd, owned by W. J. Higdon, Tulare. Freshening as a senior four year old she has to her credit 39.74 pounds butter from 667.5 pounds milk, and is now milking 105 pounds per day. She was sold in the last Guaranty Sale at Sacramento by Carnation Stock Farms, Seattle. She comes rightfully by her great production, being sired by Ollie Johanna Sir Fayne, son of the 31 pound show cow Ollie Watson Prima Donna, and out of a 27 pound granddaughter of Hengerveld De Kol. Her sire already has several other daughters with records from 30 to over 33 pounds butter in seven days. She is a beautiful individual of unusual size, and will this year be given an opportunity to make the large yearly record of which she is capable. She made her big record with the greatest ease, and in the total of 12 days that she has been on test has made 66.50 pounds butter, an average of five and one-half pounds per day.

Another good record recently made in Mr. Higdon's herd is that of Fay Tritomia Hengerveld, a daughter of the richly bred show bull Mutual Fobes Longfield De Kol. In seven days she made an official record of 30.39 pounds butter, while her junior two year old daughter, by Prince Riverside Walker, made 17.16 pounds butter in seven days and is making a nice 30 days' record. These records were all made under the care of Harry L. Redd, and supervised by men from California agricultural college.

Remarkable Year's Record

The Guernsey heifer, Minnehaha's Papoose 67732, leads all dairy heifers of her age of any breed with her record.

This remarkable young heifer started her record May 25, 1918, when she was 22 months of age. From that time until May 24, 1919, she produced 11,623.6 pounds of milk and 678.37 pounds of butter fat.

She originally started her test on April 1, when she was 21 months of age, but as she was served on May 7, 1918, her record was continued so that she not only produced this remarkable amount of milk, but she also carried a calf 265 days during her record. She dropped her second calf February 14, 1919, not being dry a day during her test, and during the short month of February, in which she calved, made 44.97 pounds of butter. She affords an interesting illustration of the ability of a cow to carry a calf during test and to come back after giving birth to a strong healthy calf, and without being dried off for a day.

She holds the world's record for a heifer starting test under two years of age, not only of the Guernsey breed, but for all dairy breeds.

Minnehaha's Papoose 67732, because of her extreme youth, was started on test more for the purpose of keeping her growing than any expectation of getting a big record from her. The result of the experiment was that she gained nearly 400 pounds in weight during the year; she dropped two large, healthy calves within ten and one-half months of each other.

Frank Anderson Sale of Berkshires

Frank B. Anderson held his sale of Berkshires on the state fair grounds, Sacramento, December 2. The day was cold and rainy but even with this handicap a sufficient number of buyers were present to absorb the offering at very satisfactory prices. Fifteen bred sows and gilts were sold at prices ranging from $100 to $240 and the open gilts and spring pigs brought from $40 to $75. A number of young boars were sold, including two old enough for service, at from $35 to $140. The top of the sale was the bred sow Natomas Beauty, by Riverby Prince 9th, the sire of a grand champion sow. She was bred to Ideal Royal Lee, the sire of the grand champion sow at the Southern Berkshire Congress Show 1918. She was purchased by E. S. Train, San Francisco, for $240. Mr. Train also purchased four other sows, paying from $145 to $225. J. Francis O'Connor, Santa Rosa, purchased a number of open gilts, includ-

ing Natomas Duchess 4th, an outstanding animal by Winona Lee Champion 6th. Other liberal buyers were H. C. Muddux and Son, Sacramento; Butte City Ranch, Butte City; G. Meister, Sacramento, and the Whitney Estate, Rocklin. Ord L. Leachman, Sacramento, was the auctioneer.

Mr. Anderson is well pleased with the results of his first sale although the weather was against him. He has associated with him John A. Fogarty, formerly with the university farm at Davis, and their efforts will be confined to the breeding of Berkshires and Holsteins.

PUBLICITY FOR THE HORSE

Wayne Dinsmore, secretary of the Percheron Society of America, writes:

The horse needs, not sympathy and protection, but publicity. The world needs to know how much it owes to the horse; how production and transportation costs are increasing through attempts to displace the horse in agriculture and commerce. To collect, verify and make known facts which will educate the public in general to an appreciation of and respect for the horse is the work that has been undertaken by the Horse Publicity Association of America, which was organized October 30, 1919, at a national meeting of horsemen and allied interests in New York City. Fred M. Williams of New York City was elected president and Geo. S. Hoovey of Kansas City, Missouri, treasurer. Directors from all allied interests, 24 in number, were elected, and all parts of the United States are represented.

Unsigned communications receive no attention.

Musty Hay

Will feeding musty hay or hay that has gone through the thresher to remove the seed and is almost ground and very dusty decrease the milk supply? The hay is also full of sand burs. I have a cow that has dried up very suddenly. I have been feeding straw or hay that has gone through the thresher. — Subscriber, Parker, Arizona.

Such hay as you describe is not fit to feed to anything and is hardly fit for bedding. Such hay is not much better than sawdust only it does not contain rosin nor acids that are found in sawdust. When hay is left standing until thoroughly ripe for seed it contains very little that is digestible except the seed and that was taken out by the thresher; beside the hay being ground fine prevents the cow forming a cud out of it and a cow will not thrive on feed that will not form a cud. If you change to good feed at once and keep up the milking you may get her started again.

Lumps in Udder

I have a cow that has a large lump in her udder. It has a rough feeling as if it had knots and bumps on it. It is not sore and the cow makes no fuss when being milked nor while rubbing the udder over the lump. Nothing shows on the outside. We first noticed stringy milk coming from one quarter but that has long since ceased. The lump remains and does not break up with rubbing with turpentine. What treatment would be best for it?—Subscriber, Arizona.

Such lumps are often tubercular. Have her tested if possible. I surely would not use milk from that quarter.

COFFEE IN GUATEMALA

Harry Johnson, a Los Angeles boy, writes from Tucurn, Guatemala, that they are in the midst of coffee picking (November 15) and can get but 275 hands, though needing 600. The company he is with has 17,000 acres of lands in three "fincas" or plantations, and more than a half million coffee trees. He describes the plant life as "luxuriantly wonderful." While living in Los Angeles Mr. Johnson was an expert plantsman in the employ of the park department.

For Sale—Nelson Tractor in good condition. Mrs. Lena Clendenon, Palms.

Poultry Queries

Conducted by J. A. Koethen

Spotted Liver

I have lost two hens from spotted liver and now have a third affected the same way. Please tell me the cause and the remedy. Am feeding bran mash, dry bran, wheat, Egyptian corn, and have had plenty of alfalfa, also giving them oyster shell and charcoal. No one here seems to know anything about the disease. — Subscriber L. R. M.

In "Poultry Diseases and Their Treatment," a bulletin issued by the Maine station, which is the most comprehensive work of its kind that has been published in this country, we read: "In general when post mortem examination shows the liver larger or smaller than normal or congested with blood or marbled or spotted, we may assume that the bird had some form of liver disease," and J. H. Robinson gives the following advice: "Just as soon as it is suspected that there is liver trouble in the flock one or more indisposed birds should be killed and examined. If examination confirms the suspicion prompt measures should be taken to counteract bad tendencies. These should look first to good diet. Make the mash, if mash is used, light and bulky; feed green and vegetable foods liberally; compel exercise in scratching for food. Then get the fowls out a little every day and if sanitary conditions in the house are at all objectionable correct them. When the conditions to which a flock is subjected are such that a number of bad cases of liver trouble develop, it cannot be expected that corrective measures will arrest development and restore to health in every case."

Your ration looks all right, but it may be you are feeding too heavy a scratch ration and that the hens are not getting sufficient exercise. You do not mention your dry mash. If you are feeding only bran and no meat meal in it, your hens are getting too much starchy food and too little protein. They need a balanced mash containing several ground grains and about 20 per cent of beef scrap and vegetable meal. Fifteen per cent beef scrap and five per cent soy bean meal added to equal parts bran, middlings and corn meal would give them a good nourishing egg mash. It is well to increase the proportion of green feed until there is improvement in the general health of the flock.

Copious rains throughout Washington have made the soil tillers happy.

Big Profits in Cavies

Join Us in the Business

Because of our inability to supply our customers with guinea pigs, otherwise known as cavies, we have opened a California Branch and offer one of the most unusual money making opportunities to men and women, boys and girls, that was ever announced.

We want to enlist the services of several hundred responsible people to raise guinea pigs for us. You will find if you will investigate us, that we have one of the most reliable and best known breeding farms and laboratories in Wisconsin—The Dr. J. A. Roberts Laboratories and Stock Farms at O-con-o-mo-woc.

OUR GUARANTEE IS THIS

We agree in writing to buy all the guinea pigs that you can raise from stock purchased from us or their descendants and will pay you $1.20 a pair for animals weighing over 8 ounces delivered. We sell them to laboratories, hospitals and colleges.

This guarantee does not mean that you are compelled to sell your stock to us—you can sell it wherever you choose. The demand for guinea pigs is growing so rapidly that you can often get better prices—but if you cannot, our guarantee stands and you will have a dependable, profitable market at all times.

Few industries offer such profit at so slight cost in money, time and material as raising guinea pigs. A few hours each day would be sufficient to care for several hundred which nets a handsome profit. Children can care for a good many and have great fun doing it.

Guinea pigs increase very rapidly—one is often known to have as many as twenty young in a year while many of these will in turn produce more offspring before the end of the year. It is possible for one pair to have as many as fifty descendants in a year. They may safely be kept in a dwelling house without fear of offensive odors. Most people construct hutches in their back yards and breed them in large numbers. The guinea pig is a hardy animal living outside if kept dry and out of drafts. Children are in no danger of being bitten or scratched with guinea pigs and they are subject to few, if any, diseases. That is one of the principal reasons they are desired by hospitals. Guinea pigs do not require artificial heat. The climate of California is ideal for raising them.

COST. EXPENSE. PROFITS

The cost of raising guinea pigs to salable age is about 5 cents per head. Feeding cost is practically nothing as the little animals eat scraps, cabbage, lettuce, etc.

U. S. Government Says, Bulletin 525, "Guinea pigs sell at various prices, depending on supply and demand. The average price for several years has been about seventy-five cents, but laboratories now report suitable stock is scarce and that they have been paying from one dollar to one dollar and a half for their supply of young.

"Ordinarily five litters may be expected in a year, averaging about three young each. A female in her breeding prime may be expected to raise twelve to fifteen young each year.

"The rearing of guinea pigs requires no extraordinary knowledge and no great outlay of capital. Little space is needed to accommodate the animals, which are hardy and easily managed."

Figure out the profits for yourself. The Dep't. of Agriculture states that from 12 to 15 young may be expected in a year, which at from 75 cents to $1.50 gives returns of from $9.00 to $22.50 each or an average of $15.75 on each female annually. The highest cost per female per year should not exceed $1.20 leaving profits that would average well over $14.00 on each female in a year.

Even a few pens should make profits that would be well worth the time and small investment required.

YEARLY ESTIMATE OF EARNINGS

Number of pigs	Earnings should be
10	$ 100.00 a year
20	200.00 a year
30	300.00 a year
40	400.00 a year
100	1000.00 a year
500	5000.00 a year

Care should be taken in the selection of stock. Animals that have been used for hospital tests or their offspring should not under any circumstances be used for breeding purposes. These animals are worthless for future tests. The animals we sell you are guaranteed never to have been used for experimental or laboratory purposes or the offspring of such stock. We buy only stock that has been raised from the original stock furnished from our pens. We cannot afford to take chances nor can you. Look at the small investment and the large profits reasonably to be expected.

A HOLIDAY GIFT FOR CHILDREN

As an inducement to children to make money—something in which they will be interested—few opportunities are offered like this. Why not buy at least three females and a male for a Christmas present for some child.

We have 500 guinea pigs coming direct by express from Wisconsin to our Hollywood, California Branch at regular intervals and can supply this pure bred stock on short notice in any quantities. The guinea pigs can be shipped wherever there is an express office, in small crates. Full instructions for care, breeding, building hutches, etc. go to each new breeder. We will trade pure bred males with you to prevent inbreeding and assist you in every reasonable manner to make a success of your business.

We absolutely guarantee all stock ordered from us to reach you in good condition. We will replace any that are not satisfactory on arrival free of charge.

It is impossible in the space allotted here to go into further detail about this attractive profitable business. Write us for more information. You can start with an investment as low as $5.00. We have a booklet telling about the breeding, care and money making possibilities offered with guinea pigs that we will send to anyone on receipt of 10 cents to apply on expenses of printing, postage and mailing. Write today.

Dr. J. A. Roberts Laboratories, Hollywood, California

High Class

White Plymouth Rocks

Birds of great vigor and fine exhibition quality. The result of ten years of careful selection. As egg producers they have no superiors and in the show room they have demonstrated their merit. At the recent Southern California Fair my birds were awarded four out of a possible six first premiums.

Fine utility birds with good standard markings, cocks, cockerels, hens and pullets at $5.00 each. Hens and pullets in lots of four or more $4.00 each. Exhibition birds of fine show quality, males and females, $10.00 each.

Geo. I. Lytle **Perris, Cal.**

Finding the Layers With Trapnests

By Jean A. Koethen

IT'S a long road, but the only sure one. George C. England of Inglewood is demonstrating its certainty.

"George England is a very clever man," declared one of his neighbors when I asked the way to his ranch. Rumors of his successful work with poultry had reached me from other directions, and I was hardly prepared for the youthful face which greeted me nor for his boyish enthusiasm. One would pick him out for a college boy instead of a man who is studying his way through one of the big problems of breeding.

"Just wait till I get these hens out of the nests," he interrupted me as a loud cackle warned him that at least one hen had finished her morning's work, and then for a few minutes there was a flurry of wings and legs as two or three industrious biddies were drawn from the nests, their band numbers examined and noted on the record tacked on the wall. When a hen cackles George England has ears for no other sound.

When I say that Mr. England is pedigree breeding the fourth generation of 200 egg hens I am making a statement which bespeaks for him the respectful attention of everyone interested in poultry breeding. This is a task very few Southern California breeders have had the courage to even attempt. For the most part we fall back on the much easier expedient of Hoganizing, or, if we are very strenuous, we cull according to color. "I have no use at all for the Hogan system," declared Mr. England, emphatically, as he dropped the last pullet on the straw. "They needn't tell me they can come in here and pick out my best layer by the thickness of her pelvic bones or the number of fingers between them and her breastbone. I had a letter last week from a man who wanted to buy a breeding male. He said he must be four fingers from keel to pelvic bones, with the bones an eighth of an inch thick, and so forth and so forth. Why, it would take $20 worth of my time just to find him, if I had such a bird. I just wrote back that I didn't believe I had anything that would suit."

Blood Will Tell

These 18 daughters of 24RX are full sisters and granddaughters of old 593, the original 242 egg hen. Not one of them laid less than 200 eggs in her pullet year.

Pedigree breeding on the England ranch dates back to old No. 593, the original 242 egg hen. She is still in the flock and will remain till she dies of old age, shabby and disreputable looking as she is, hardly fit to associate with her beautiful granddaughters. No. 593 was mated to a male purchased from a breeder of heavy laying stock. Whether or not he was the son of a high producer is not known, but the sequel justifies the suspicion that he was. Ten daughters of 593 from this mating laid 217 eggs or more in their pullet year, the highest record being 254.

The four best of these ten daughters of 593 were mated to a son of another 217 egg hen (not their sister) and 16 pullets from this mating laid over 200 eggs, the highest record being 283. This was in the first 12 months of their pullet year. Fourteen of these 16 pullets will be used as breeders this coming season.

Twenty-eight out of 31 granddaughters of 593, the 242 egg hen, laid over 200 eggs in their pullet year. This is strong evidence in favor of the sometimes disputed fact that the daughters as well as the sons of high producers inherit fecundity from their mothers. To be sure, the sire of these 31 pullets was known to be the son of a high producer, but there is every reason to believe that the mothers' fecundity was not without its influence.

In this flock there are nine hens that laid over 300 eggs in their pullet year, that is, from the time they began to lay till they went into the molt the following fall. The best of these laid 331 eggs in 14 months and 21 days, 266 of these being laid in 12 months. Another hen, old 24 R X, laid 296 eggs in 12 months. Out of 18 daughters of 24 R X, five have laid over 70 eggs apiece between August 1 and November 1 of this year.

So much for the story the trapnest tells. Without it, how would 593 or 24 R X have been picked out? They would have Hoganized, perhaps, as hens of large capacity, and by the color system would have been segregated among the best layers, but who is to know how many eggs a hen lays unless he trapnests?

No-Yard System

Mr. England is another poultryman who believes in the no-yard system of housing. "Hens lay more eggs without yards," he insists, and where is the sense in bare yards anyway when they are soon trampled hard as cement? His long houses are built in sections 16 by 20, with 80 to 85 hens in a house. This allows about four square feet of floor space for each hen. The board floors are covered with straw, which is removed and replaced with clean litter every two months. The litter which is removed sells for seven cents a foot, which goes a long way toward paying for the straw.

On the three acres which this ranch occupies are three or four of the long houses, housing altogether over 4,000 birds, young and old, and a new house, 140 feet long, for special pen

It's not fat—it's EGGS you want

Are your hens just boarders? Fat and lazy? All their food going to flesh? Nothing left for egg production? Madam,—Your hens' egg organs are dormant, and if you are going to be satisfied to let nature bide its own time to revive these dormant egg organs, it will be Spring eggs, not Winter eggs, for you. But why wait on nature?

You can speed up egg production—you can make your hens lay now by feeding

Dr. Hess Poultry Pan-a-ce-a

It contains *Nux Vomica* and *Quassia*, the best nerve, appetizing and digestive tonics known to the *Materia Medica*—tonics that promote a hen's digestion—tonics that tone up the dormant egg organs so that the proper amount of food goes to egg production, and not all to flesh, and fat, and laziness, when it's action, and eggs you want.

Pan-a-ce-a supplies the additional iron for the blood, which is essential to the speeding up process. It contains certain forms of lime that supply the needed material for making egg shells.

Dr. Hess Poultry Pan-a-ce-a insures a healthy, singing, laying, paying poultry flock, Winter as well as Summer.

Always buy Pan-a-ce-a according to the size of your flock. Get it from a reliable dealer in your own town. Tell him how many fowls you have, and he will supply you with the proper sized package, which is guaranteed. 30c, 60c, and $1.25 packages. 25-lb. pail, $3.50; 100-lb. drum, $12.00. Except in Canada.

Get More Eggs; Save Feed

Egg prices are high and going sky-high—higher than ever before. Those who know how and what to feed to get the most eggs all winter and spring will reap big profits. Improper feeding methods will result in fewer eggs, wasted feed—loss and disappointment. Prof. T. E. Quisenberry, Director-in-Chief of the great American Egg Laying Contest, and officially recognized as one of the world's greatest poultry authorities, has just completed a 16-page bulletin on "How to Get More Eggs and Save Feed." He will mail this bulletin to readers of California Cultivator who will write him without delay. Send no money. Over a thousand hens under Quisenberry's direction laid from 200 to 304 eggs each per year. He just finished making a profit of $6.15 per hen in nine months on commercial eggs from one large flock. Write him today for his free bulletin, addressing care of American Poultry School, Dept. 1411, Kansas City, Mo.

ings, is in process of construction. I was glad of an opportunity to verify my figures in a recent article as to the cost of building and found that I had understated instead of overstating. I estimated that a modern poultry house would cost from $1.50 to $2 for each hen it houses. Mr. England says this new house of his will cost from $2.75 to $3.25 per bird.

Electricity Ad Libitum

Electricity is used to a limited extent in the laying houses, but only to a limited extent. "You cannot expect highly fertile eggs from a hen that is being forced to the limit," is this poultryman's dictum. Lengthening the hen's working day by turning on electric light morning and evening can easily be overdone. When the hens in question are not intended for breeders it is worth while to sacrifice vigor for the sake of increased egg production. With breeders such a sacrifice makes for loss rather than profit.

"Keep a good hen till she dies" is another of Mr. England's maxims. Hens that have passed the trapnest test are kept two years more or perhaps three if they are very good. In four years one hen that laid 242 eggs in her pullet year laid 752 eggs in spite of the fact that she lost four whole months on account of an accident. This was an average of 188 eggs for the four years.

All pullets are carefully culled before they are placed in the trapnest houses, then they are left there a full year. A White Leghorn pullet that does not lay before she is seven months old is not considered worth keeping, but most of these pullets begin at four and a half months. Any laggard that escapes the first culling is caught by the trapnest. In November pullets were averaging 50 per cent and pullets and hens together 62 per cent.

Breed and Feed

The secret of a good yield, in Mr. England's opinion, is twofold: First, breed only from high producers, mated to the sons of high producers. Second, feed all layers and all breeders a good, full ration, with all the green feed they can consume. A prepared mash is kept before the birds in hoppers, and the night feeding of grain has included wheat ever since it became available. It is impossible to prevent January and February pullets from molting lightly in the fall, but by generous feeding their egg yield is kept from dropping below 50 per cent.

Every inch of the ranch that is not occupied by buildings is planted to some kind of green. Kale, chard, mangel beets and barley are the standbys, but every kind of green that can be raised or bought is utilized. Daily at noon the green feed racks are filled, and the birds peck and nibble till supper time.

Does all this care is trapnesting, mating and feeding pay? The fact that these hens average over 60 per cent when eggs are retailing at 85 cents and that all the chicks that can be spared before the middle of April are already engaged at 25 per cent above the regular price speaks for itself. The care of such a flock is tremendously exacting and takes all Mr. England's time as well as that of two hired men, but there is no question about profit.

A Merced subscriber writes: I see an article in your paper inquiring about chicken ticks. They are hard to get out of buildings, but here is a sure remedy for killing them on your hens and roosters: One tablespoon of sheep dip in one-half gallon of warm water.

Dip your chickens in it but do not let their heads get in it so they can swallow any. Do it on a warm day. I use a big pan and to every tablespoon of dip I put in one-half gallon water until I get enough in pan to dip them. Rub feathers well so it will get to the skin. Your hens will start laying but you can't eat the meat of the chicken for three weeks as it will taste of the dip.

I use crude oil in the buildings, spraying with a spray pump. I dip my chickens about three times a year, or any time they want to set and I do not want them to. I dip them when I let them out of coop.

Semi-Solid Buttermilk

Makes 'Em Grow Fast

Feed your hogs and poultry semi-solid buttermilk. It keeps them healthy and gets them to market earlier.

Semi-solid buttermilk is pure creamery buttermilk, with nothing added—only the water is taken away. It is not modified by the addition of sulphuric acid or any other preservative its own NATURAL LACTIC ACID keeps it fresh.

We Guarantee Every Barrel of Semi-Solid Buttermilk.

We guarantee that semi-solid buttermilk is pure and unadulterated, sterilized and pasteurized. It is a SAFE feed, and you will be satisfied with the results from feeding it.

Saves Grain, Saves Time, Saves Money

Saves GRAIN, because it balances the grain ration. Saves TIME because hogs and poultry fatten quicker when fed semi-solid. Saves MONEY because you don't pay freight on the water content of the buttermilk, and you don't have to feed so much high-priced corn.

Semi-Solid Buttermilk Is Essential

for BABY CHICKS; raises every one; keeps them healthy and vigorous. No sickly or dead chicks.
TRY IT

FOR LAYING HENS—The egg production increases at an astonishing rate. Keep accurate account, and TRY IT.

POULTRY FOR MARKETS—Milk-fed chickens reach market first, with choice, firm, white flesh. TRY IT.

We know what SEMI-SOLID BUTTERMILK will do. Don't be skeptical, but try it, to be convinced.

A carload per week is consumed in the Petaluma District alone.

Semi-solid buttermilk is put up in 500-lb. barrels, half barrels, quarter barrels and 10-gal. kegs. Have buttermilk when you want it. Semi-solid keeps in any climate, any length of time.

Order from your dealer. If he can not supply you, send your order to Dill-Crosett, Inc., 235 Pine St., San Francisco, and we will supply you direct from our factory at Benicia, California. You pay on receipt of the goods.

The Reliable Blue Flame Wickless Oil Heated Hover

This Hover Represents Our 30-Inch 42-Inch and 52-Inch Sizes.

THE MODERN HOVER

This hover has the same chick capacity as the coal burning brooder. They are made in four sizes, 18 inch, 30 inch, 42 inch and 52 inch hover. A few of the special points on this oil heated hover are as follows:

- Burns Coal Oil
- Steady Blue Flame
- Comfortable and Easy to Operate
- Economy of Operation
- No Wick to Trim
- No Oil Fumes
- Visible Oil Feed
- Convenient and Safe
- No Coal, Smoke or Gas
- The Flow of Oil Is Regulated Automatically

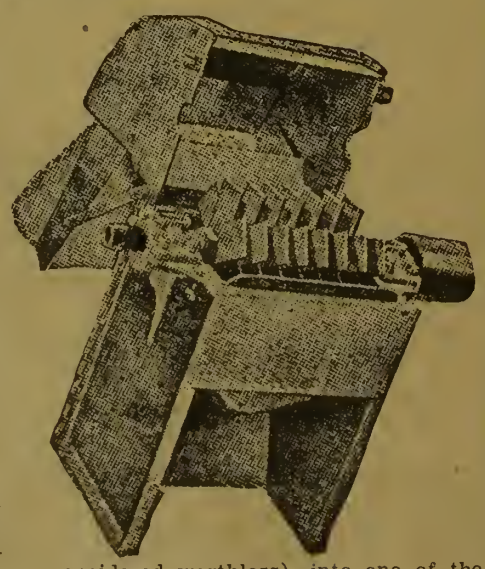
The "W-W"

(Hammer Principle) ALL PURPOSE FEED GRINDER

Utilizes Waste Products that being ground with a "W-W" are Valuable Stock Foods.



Many valuable foods for stock are being wasted in California because heretofore it was impossible to convert the waste products into safe food for stock.

But with the "W-W" All Purpose feed grinder that is having such remarkable sale since introduced by us, everything of food value to stock can be saved. Many feeders have made back double or three times the small cost of a grinder in the saving on feeds and the best part of it is the "W-W" Grinder is still working and working better than any grinder or beater (this is the hammer principle), that was ever sold in California, grinding the feed so it goes farther and does the stock more good.

One user has been converting almond hulls (not long ago considered worthless), into one of the very best and most valuable of ground foods for stock.

You can pulverize hay, cotton bolls, hulls, any kind of grain, fertilizer, shavings, poultry, rabbit and goat feeds into any degree of fineness.

Built in a wide range of sizes for horse and engine power. Write for information about W-W Mills and economical, efficient feeding, stating what raw material you have available and tonnage required. "W-W" grinders quickly pay for themselves.

Bleached Thompsons: Choice, in 25s, sulfur, 18; fancy, in 25s, sulfur, 18½; extra fancy, in 25s, sulfur, 21; soda dipped, in 25s, 17¾; oil dipped, in 25s, 17¾, Sultanas, 16s, 15¼; Sultanas, bulk, in 25s, 14¼. Layers: 6-crown, flat pack, 20s, per box, 4.05; 6-crown, flat, 10s, per box, 2.20; 6-crown, flat pack, 5s, per box, 1.20; 4-crown, flat pack, 20s, per box, 3.20; 4-crown, flat pack, 10s, per box, 1.75; 4-crown, flat pack, 5s, per box, 1.00; 3-crown, tray pack, 20s, per box, 3.10; 3-crown, flat pack, 20s, per box, 2.95; 3-crown, flat pack, 10s, per box, 1.60; 3-crown, flat pack, 5s, per box, 95; clusters, 20-1s, cartons, 3.45; clusters, 12-2s, cartons, 3.80; clusters, 4-5s, cartons, 4.50; vineyard run, 100s, 13.00.

GRAIN

Wheat: The prices are based upon federal grades and standards at the terminals in San Francisco Bay and Los Angeles, and are as follows, per bushel of 60 pounds:

Hard White—	Per Bushel	Per Cental
No. 1	$2.20	$3.66 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.13	$3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51½
Club and Sonora—		
No. 1	$2.16	$3.00
No. 2	2.13	3.55
No. 3	2.09	3.48½

The above are minimum prices.

For sacked grain add 4½ cents per bushel of 60 pounds to above prices. Deductions of three-fourths of a pound made for weight of standard grain bags. Wheat grading under No. 3 mixed or smutty wheat will be purchased according to merit.

Oats: Red feed, 3.05@3.10; black, 3.15@3.25.

Corn: California yellow, 3.00@3.10 per cental; Egyptian, 3.50@3.60; milo maize, 3.20@3.30.

Rye: 3.30@3.40.

Barley: Spot feed, per cental, 3.42½@3.45; brewing, 3.55@3.60.

HAY

Under date of December 6, Scott-Magner & Miller says:

Receipts past week 1,002 tons, evenly divided between rail and water. The car situation throughout the state is still deplorable. During the week we have had general rains whose value cannot be estimated. This is especially the case with the stockmen, as feed from the ranges was practically gone and without rain would have resulted in a long spell of feeding to maintain their stock.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market — for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions:

Fancy Wheat Hay (light 5 wire bales)	24.00@26.00
No. 1 Wheat or Wheat and Oat Hay	21.00@25.00
No. 2 Wheat or Wheat and Oat Hay	20.00@22.00
Choice Tame Oat Hay	23.00@26.00
Other Tame Oat Hay	20.00@23.00
Wild Oat Hay	19.00@22.00
Barley Hay	19.00@23.00
Alfalfa Hay	21.00@26.00
Stock Hay	16.00@19.00
No. 1 Barley Straw, bale	.50@ .80

Citrus Markets

Los Angeles, December 10, 1919.

Occasionally spectacular prices are received but as a rule slightly easier condition prevails. The large holdover of Valenclas has been very acceptable to the Eastern rade but it has interfered somewhat with the demand for Navels. However, Navels have been exceptionally rich in sugar and solids so that they have proved satisfactory to the trade. Florida oranges are going to market at the rate of about 100 cars daily.

Lemons are commanding from $3 to $4 f. o. b. according to grade.

Shipments

Shipment of oranges from Southern California to date since November 1, 1919: Oranges, 2.491 cars; lemons, 449; total, 2,940. To same date last season: Oranges, 448; lemons, 701; total, 1,149. Central California: Oranges, 2,369; lemons, 81; total, 2,450. To same date last season: Oranges, 1,738; lemons, 149; total, 1,887. Northern California: Oranges, 178; lemons, 2; total, 180. To same date last season: Oranges, 115.

LOS ANGELES MARKET NOTES

Cabbage shows sharp upward trend owing to scarcity of storage crop in the East. In the last two or three weeks prices have advanced more than 100 per cent or from $30 per ton to $65 and $70 f. o. b. at present.

Ordinarily at this season cauliflower is going down but owing to recent cold weather the tendency is sharply upward, prices to producers being $1.75 to $1.85 a crate.

The tomato season is about closed, lug boxes bringing $1.50 to $2.00.

Lettuce is high, selling for more than it is worth as compared with other vegetables, California lettuce bringing $7.00 to $8.00 a crate in New York and none of it fancy. Locally it sells for $3.85 to $3.90 for straight carload lots and $4.00 in mixed cars, all of very ordinary quality.

One noticeable novelty on the local market is several tons of "Italian celery," the blanched centers of the artichoke plant, three to four feet high. Such tops sell readily at $1.50 each.

Hubbard and other squashes and pumpkins are in largest tonnage and plenty of watermelons and casabas still coming in. Lug boxes filled with large choice ripe olives were seen in a few stalls. Pears and persimmons were few and

An Opportunity to Share in the Profits of

MONTGOMERY WARD & COMPANY

INCORPORATED

The Great Mail Order House

You have probably been a customer of Montgomery Ward & Co. for years. You have probably sent hundreds of dollars by mail to this concern. Perhaps it has never occurred to you that some day YOU might be able to own a few shares of stock in Montgomery Ward & Co.—be able to share in its profits. Here is such an opportunity.

510,000 Shares Common Stock at $45 Per Share

when, as and if issued and received by us.

The great Chicago mail order house is expanding—increasing its capitalization. It expects to do a greater business than ever before—to earn even larger profits. If this proves true Montgomery Ward & Co. common stock should steadily increase in value and earn handsome dividends.

On Monday, December 8th, 1919, 510,000 shares of the new common were offered to the public for the first time at $45 per share. Indications on that day were that it would all be quickly sold—that to secure any of it, you will have to place your order immediately.

Write NOW for Circular!

A circular fully describing this stock issue has been prepared. It tells of the gigantic nature of the business—the earnings of the company—of the dividends that have been paid. Write for this circular TODAY. Learn how YOU may become a partner in the business of Montgomery Ward & Co. Write for the circular NOW!

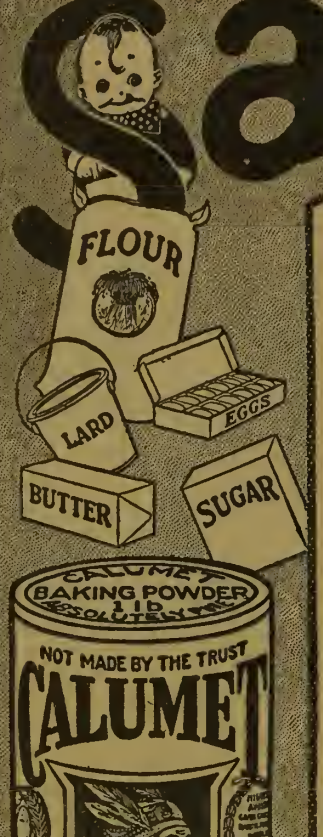
CALUMET Saves



Calumet Baking Powder forms the very foundation of kitchen economy. It is the best way to reduce the high cost of living.

There's nothing you can do, nothing you can use that will help so much in keeping down food expense.

CALUMET is so perfectly made—so perfect in keeping quality — that bake-day failure is impossible. Nothing is wasted or thrown away. Everything used with it—flour, sugar, eggs, flavoring—is converted into wholesome bakings.

Makes Most Palatable and Sweetest of Foods

You save when you buy it—moderate in cost. You save when you use it—has more than the ordinary leavening strength — therefore you use less. You save material it's used with.

Made in the world's largest, most modern baking powder factory. Contains only such ingredients as have been officially approved by U. S. Food Authorities.

Order today! Conserve! Economize! SAVE.

SANTA CLAUS IS COMING

Old Santa Claus is coming—
The time is very near—
Before we realize it
Old Santa will be here.

He'll bring us sleds and wagons,
And nuts and sugar plums,
And dolls, and furs, and dresses,
And balls, and swords, and drums.

He'll come when we are sleeping,
Tucked in our bed so white,
And all the stars are peeping
At this, our Christmas night.

He'll come with smiles and blessings
Along the milky way,
And stop at every dwelling
Where little children stay.

He'll garnish trees with presents
And, while the world is still,
With gifts the children asked for
Each stocking he will fill.

But, better than all presents,
He'll bring to us again
The heartfelt Christmas wishes
Of "Good will unto men."

—Martha Coleman Sherman in Chicago Inter Ocean.

THE EVOLUTION OF SANTA CLAUS

It used to be, quite long ago, Old Santa
walked from door to door,
He carried his pack upon his back and
gave alike to rich and poor;
So many asked that he would call there
was no end to it 'twould seem,
His presents, therefore, he must haul
each Christmas with a reindeer
team.

It used to be, quite long ago, Old Santa
had his good reindeer,
With curling whip and jingling bells and
old-time sleigh, so quaint and queer.
The world moved on at such a pace; the
dear old man watched from afar.
And knew he'd one day lose the race
unless he got a motor car.

It used to be, quite long ago, Old Santa
thought his car quite swell,
But things were changing, so you see
Old Santa had to change, as well.
'Twas for the best 'twas cast aside—
'twill ne'er be used by him again
For Santa's very modern now—he
travels in an aeroplane.

—Orange Judd Farmer.

THE ALTERED CHRISTMAS

"NO" said Mrs. Stephens decidedly, as she poured her husband's tea and spread a slice of bread for Gertie, her youngest child; "I don't believe in poor folks like us spending a lot of money for Christmas. Anyway, we can't do it this year because we haven't got it to spend."

"Couldn't we spare just a little?" asked her husband hesitatingly.

"I don't see how we can do it and keep up the payments on this house," she replied firmly.

"Of course you know best, but I thought mebbe just a little," he murmured apologetically.

"Then ain't we going to have any Christmas at all—no presents, or dinner, or anything?" asked Laura in alarm.

"You'll have dinner all right, and a good one, too; pork an' beans, and apple pie is Christmas dinner enough for poor folks." Here fat little eight-year-old Gertie began to cry and had to be chided. Laura and Gertie White were Mrs. Stephens' children by a former marriage, for she and Mr. Stephens had been married less than a year. At the table also was Marie Stephens, and while the two little White girls kept up a lamentation regarding the decree of "no Christmas," she preserved a silence that made Mrs. Stephens uncomfortable.

'Hush," she said, but not sternly, to her own progeny. "Think of last year and be thankful that you are so much better off than you were then." Her eyes rested on Mr. Stephens' commonplace figure in unwonted tenderness. "Last year," she said simply, "we were living in two rooms, and were glad to have a fire and enough to eat. Some of the time there wasn't a bite left after a meal, but I always managed to get something before the next one. Do you wonder, though, that I look after those payments before anything else?"

"No," replied her husband, "and you're right about it. I'm glad you're so practical-minded. But we'll all feel so proud when we get a home paid for that we ought to be willing to go without other things. I guess we're all more comfortable than we were last year. Marie and I was boarding with ol' Mis' Green, and it wasn't much like this, was it Marie?" He did not pause for any reply from the child but went on, "I ain't going to work tomorrow, and we'll do something to have some fun—go a-sliding on the hill while Ma's getting dinner, and mebbe she'll let us make candy and popcorn in the afternoon."

Mrs. Stephens smiled her consent, and the children looked glad again. Mr. Stephens put on his overcoat and kissed them all around before he went back to his work. The children donned their outdoor garments, and each kissing her hastily ran off to school. Mrs. Stephens dreaded to have Marie kiss her. She fancied that the child hated it, and only did it because her father told her to. She was always in fear that some day Marie would refuse, and then it would be harder for them both than if the habit had not been begun. Marie seemed to her stepmother to be always watching and judging her. The child was quiet and docile, but underneath her docility Mrs. Stephens was aware of a great strength of character. She wanted to love her husband's child and already favored her more than she did her own, but she could not seem to win the child's open confidence.

In one thing only had Marie opposed her stepmother. Mrs. Stephens, intensely practical as she was, considered the name "Marie" as fanciful, and sometimes addressed her as ""Mary." Marie, with the utmost politeness, always corrected her. "My mother called me 'Marie,'" she said each time until Mrs. Stephens adopted that pronunciation.

In her first matrimonial venture, Mrs. Stephens had been very unfortunate. The neighbors spoke of her as "a good manager, but married to a poor pervider." Mr. White had rapidly drunk himself into the grave, and for three years his wife had had a hard struggle to provide for herself and her two children.

Mr. Stephens, on the other hand, had been a good provider married to a poor manager. He was a shoe cobbler by trade, and had a little business of his own where he earned good wages. He never referred to his first wife's extravagances but his life with her had been one long struggle to keep out of debt. She had been dead a little more than a year when he asked Mrs. White to marry him, and in the country town everyone expressed satisfaction at the suitability of the match. Already they were established in comfort in the house they would soon own, and the worries that they had each had were gone.

Sometimes it seemed almost too good to be true to Mr. Stephens that he and Marie should be so well cared for, for like many extravagant women, Marie's mother had been a careless and untidy housekeeper. She was subject to long fits of sulks, too, when she neglected her child altogether. If his wife now seemed almost too practical regarding Christmas, he thought of his former troubles and concluded to let her have her own way.

As she cleared the table, Mrs. Stephens looked thoughtfully at a piece of cold meat that was left. "I could make a bit of mincemeat out of that," she thought, almost guiltily, "and surprise 'em with a mince pie, instead of apple. 'Twon't do no harm to give 'em that much extra for dinner." When one has taken a stand it is sometimes hard to back down, but her husband's lack of opposition helped her to give in this much.

Somewhat to her surprise the children were talking. There was a rule that there should be absolute quiet as soon as the lamp was out, a rule that Laura and Gertie often broke, but never before had Mrs. Stephens known of Marie's doing so; this time, however, she was the offender. With a consequent reluctance to reprove her, the mother stood there for a moment thinking that perhaps she had happened to go to the door just as the child spoke and that it would be quiet again in a moment. But no, Marie was telling them about her former Christmases. When she was six years old her mother had made her a pink silk dress, with spangles all over it, and had taken her to a real grown-up party where folks danced all night

"And did you have a perfectly grand time?" inquired Laura.

"Not after the first," admitted Marie. "I was sleepy and cried to go home, and Pa took me; and then Ma was mad and wouldn't ever take me again."

After this bit of intimacy, Mrs. Stephens hated to speak more than ever, so she still stood there in doubt waiting for the conversation to change, or stop entirely.

"Tell us what else your Ma got you," demanded Gertie.

"One year she got me a doll that was a yard long, and it could say 'Mama' just as plain as anything. And she got me a cab to wheel it in. And one year she got me a toy piano, only it got broke awful quick, and a set of furs. And the last year she was with us she bought me a bracelet and a locket—you've seen 'em, you know."

(Continued next week.)

CHRISTMAS STORY CONTEST WINNERS

First Prize, Eleanor Clarke, Visalia, $2. Second Prize, Beatrice Fuller, Fairmead, $1. Award of one year's subscription to the Cultivator: Ruth Kelley, Los Angeles; Florence Greenough, Merced; Stella Haverland, Santa Barbara; Emma Lehnhardt, Santa Ana; Bernice Husted, Van Nuys; Dwight Husted, Van Nuys; Elvira Rodrigues, Santa Maria; Mildred Mitchell, Fairmead; Mildred Cornell, Delano; Wilma Kemp, Cupertino.

First Prize Story.

THE CHRISTMAS I LIKE

By Eleanor Clarke, Visalia, 12 Years Old.

We were living with grandmother while father was building a house on our new ranch. Mother paid my little sister and me for doing the dishes and helping grandmother. This money we saved for Christmas. Oh, how much fun we had spending it! We decided to buy useful things.

There were some small stores near by. In passing one of them mother saw a glass pitcher that would hold a large piece of ice, so I bought it for her.

For father I bought a pair of socks, and stockings for both grandmothers, several handkerchiefs and quite a number of Christmas cards.

My sister bought all the bright colored pencils in the corner store. She also bought some candy canes.

Mother said we could have a tree if we would trim it ourselves. We made red bells and paper ornaments, popped corn and strung it with cranberries. We put up a sign to keep the people out, that said, "No admittance until Christmas eve." Sister thought her pencils and her candy canes looked beautiful on the tree.

We could hardly wait until Christmas eve when father came and we had the tree. There were lots of presents and everyone had a good time. We always have had a tree Christmas, but I liked this tree best because I trimmed it myself.

Christmas day we had a big dinner at my uncle's, more presents and an automobile ride.

This year we are living on our ranch. Our folks are coming up in the machine to spend Christmas with us. We have some puppies and little calves to show them, and mother has lots of good things put away in the cellar that she made from recipes she found in the Cultivator.

Second Prize Story

WHAT I LIKE BEST FOR CHRISTMAS

By Beatrice Fuller, Fairmead.

Christmas eve my sister and I hang the stockings for the family. Seeing we haven't any fireplace, we hang our stockings on the backs of each person's chairs, so the bulky presents can be put on the seats of the chairs. Then we children put our gifts in the stockings and go to bed and wait patiently for morning.

If it is cold mother always has a fire in the front room so we children can dress and look at our presents at the same time. I love to put my hand in the stocking and wonder what I'm going to pull out next. It is sure to be something I want.

We always get lots of presents. Last Christmas my brother got home from the army on the 24th of December and did not have much time to get anything. But he went to town that night and bought what he could, but everything was so high. But he got lots of good things just the same.

Something else I like, too, and that is Christmas dinner. Mother generally gets up a big dinner. We always have a big turkey gobbler with lots of dressing and gravy, mashed potatoes, salad, cranberries, two kinds of bread and butter, mince pie, plum pudding, raisins, nuts, apples, oranges and grapes. We raise most of what I have mentioned in the menu. We always have plenty to eat at our house on Christmas. I wish I could share part of my dinner with some poor person. We most generally have some one who cannot have any Christmas dinner.

There is my father, mother, brother, sister and I that will be here this Christmas, and whomever we ask.

A CHRISTMAS LETTER

By Ruth Kelley, Los Angeles

Dear Cousin: I am writing you today to thank you for the beautiful hair ribbon you sent me. I know you want to hear about the good time I had on Christmas.

We were very anxious to go to bed on Christmas eve so morning would come soon, but we did not go before hanging our stockings over the fireplace. We could hardly wait for morning to come. We were up very early but mother makes us eat breakfast the first thing because we would not want any after getting into the candy. The living room doors were all closed and no one could get a peep at the tree. After breakfast we all formed in line according to age, starting with the youngest. There was great excitement in the air. Everybody was shivering with delight waiting for the doors to be opened. After what seemed a long time the doors opened and we were told to look at our stockings first. There were fruits, nuts and some raisins in them. At the bottom was a large chocolate cream. Next we looked at the tree. Besides the usual decorations of tinsel, strings of popcorn, colored balls and electric lights, the tree was trimmed with frosted animal cookies mother had made and cornucopias filled with candy. Underneath the tree the presents were piled. Suddenly there was a jingle of bells and someone cried, "Look at Santa Claus!" Then Santa came in. He distributed the presents to everybody. Then we all sat down to look at them. Our presents this year were all useful. I think I had a very pleasant Christmas, don't you?

Lovingly your cousin, Ruth.

THE PART OF CHRISTMAS I LIKE BEST

By Bernice Husted, Van Nuys, age 13

The most joyful part of Christmas to me begins with the selecting of an appropriate Christmas tree for our family gathering.

When the tree is placed in the corner nearest the fireplace and we proceed to decorate it with popped corn, cranberries, apples, candy, tinsel and candies and then neatly arrange the presents on and around the tree, and when all is complete, and every member of the family is gathered together in their places in the room, all the lights turned out, and candles are lighted, the supreme moment comes when the jingling of bells outside is heard, and Santa Claus (Daddy) comes bounding, laughing, talking into the room, making all hearts glad with excessive joy. After this joy has partly subsided Santa Claus proceeds to pass out the presents, but suspense and excitement still reigns until every package has been opened and everyone has seen each other's gift.

To me, this is the part of Christmas I like best.

WHAT PART OF CHRISTMAS I LIKE BEST

By Stella Haverland, Santa Barbara, age 11 years

I think Christmas is one of the jolliest times of all the year. From counting my money to spend to opening the presents taken from the beautiful Christmas tree, decorated with strings of popcorn and ornaments galore, to eating Christmas dinner with its turkey, cranberry sauce and other things, or the ride and games after dinner, I think there is no nicer time than buying the presents and wrapping them to give to my friends and relatives.

A book that father has been longing for is purchased and put away,

Where Upkeep Counts Most

Twelve million miles of wire, connecting cities, villages, farms; running under busy streets and across trackless prairies; these are the Bell Telephone's avenues of speech.

These twelve million miles of wire, throughout every foot of their length, must be kept electrically capable.

A few drops of water within a cable may cut off a thousand subscribers. A line snapped by storm may isolate a district. A wet leaf touching a wire may stop service. In most kinds of work the lessening of efficiency means merely the lessening of service; but with the telephone, mechanical and electrical conditions must be practically perfect to insure operation.

The most delicate electrical currents in use are those of the telephone, and inspection must be ceaseless that the lines may be kept in constant readiness.

These conditions and costs must be met to provide this high standard of service needed and demanded by the American people.

ready to be wrapped and put on the Christmas tree. A sofa pillow for Aunt Jane is put away with father's present. Next a toy train for brother Dick is put away with them. Then Little Sister's present is purchased, a silver thimble, something that she has been longing for ever since she could sew. A warm kimono for mother, a pair of house slippers for grandmother, and other gifts complete the list. A few days before Christmas I wrap the presents in tissue paper, tie them with Christmas ribbon and tie the Christmas tags on them. The gifts are then ready to be put on the Christmas tree at home or taken away to other houses.

The reason I like to give so much is first, it is nicer to give than to receive, and, second, because if I can give only a small present it is better than giving nothing in return for what I receive.

Soon Christmas will be here and gone and we will look forward to its coming again next year with much eagerness.

WHAT PART OF CHRISTMAS I LIKE BEST

By Dwight Husted, Van Nuys, age 8

I like to be sitting around the Christmas tree and have Santa Claus pass out the presents and to sit at the table eating turkey and quackless duck and pie and cake, and then play with my toys when we all get through eating.

TRIMMING THE CHRISTMAS TREE

By Emma Lehnhardt, Santa Ana, age 10 years

I like the time when we trim the Christmas tree. When we children were smaller father and mother trimmed the tree after we were in bed. Now we are older and have the pleasure of decorating the tree ourselves.

In the afternoon of the day before Christmas my brothers go out to hunt up a tree, which is usually a small cypress. They fit it in the tree holder and stand it upon the table in the living room, because the baby would get it if it were on the floor.

Now we prepare the trimmings. We string popcorn; we get animal crackers and tie them onto the tree, also candles wrapped in waxed paper to keep them from getting dusty. Then we put on the festoons of popcorn and strips of red tissue paper. Last we put on the candles. We enjoy trimming the tree and afterwards we eat the decorations.

In the evening when we light the candles we sit around the tree and sing "Silent Night, Holy Night."

OUR CHRISTMAS

By Florence Greenough, Merced

Dear Friend:

Of course you know that the Christmas spirit is to give to others who have less than yourself. I belong to a club which adopted a war orphan last year. I sent some money for her last year and will this year, too. This year I began to think what to get for Christmas about a month before. I think to plan for Christmas is about as nice as having it.

We usually have a small tree, and I just love to pop and string popcorn and to put it in and out among the branches. I like to put on the tinsel and help hang on the ornaments. Then it is ready for my mother and father to put on the presents, hang up the sheet and it is ready for Christmas morning.

We children like to get up on Christmas, get our stockings, go back to bed and find the nice things that are in them. We like the dinner, and if the day is nice we go for a ride afterward.

THE CHRISTMAS TREE

By Elvira Rodrigues, Santa Maria

The best thing I like is the Christmas tree its own self, I think everybody does too. The tree is liked because the beautiful decorations make it beautiful and the gifts upon it too. The drums and soldiers make it pretty too. I like to hear the Christmas bells ring at Christmas Eve but I don't like them as well as I like the Christmas tree. I think everybody in the world likes the Christmas tree too. And I guess the California household department likes it too.

CHRISTMAS DAY

By Mildred Mitchell, Fairmead, age 1

For my part I prefer Christmas day. With what expectations you open your eyes in the morning! How eagerly you dress and run to see what Santa has brought. Then, when all have gathered around the Christmas tree, the opening of packages begins. Baby has a new doll; brother, a gun; father, a book; mother, a ring; and big sister finds a box of candy from the dearest boy in the world. Oh! what shouts of joy are heard as each new wonder is displayed.

The morning wears away and noon comes. Mother announces dinner. The children do not need to be called twice. Each one finds his place and what a jolly bunch they are, mother, father, children, grandmother, grandfather, uncles, aunts and cousins, each one laughing and talking. How good the dinner tastes! How amusing the stories! Grandmother's eyes are bright with excitement. At last the plum pudding is brought in. The dinner would not be complete without the pudding. Each one is given his share. Was there ever such a pudding? Will there ever be another like it? No, there will not.

After dinner friends come to exchange greetings and to gossip. Some one suggests a game. All become excited. Before we realize the fact it is tea time and then the long, cozy evening about the fire. Father or mother tells a story; sister brings the popper and soon each one is eating popcorn. Just before bedtime Cousin Kathryn goes to the piano and begins to play, first some of the songs of today and then into the sweet songs of long ago. Soon everyone is singing. At last father says: "Away to bed, children, it is very late." And so ends Christmas day, to me the happiest day in the year.

THE PART OF CHRISTMAS I LIKE BEST

By Mildred Cornell, Delano

I am going to describe which part of Christmas I like best.

When we hear Santa's bells early Christmas morning we jump out of bed and dress. Oh, what a sight when we enter the big front room and look around at the walls all decorated with holly and bells, and look down and see the toys all around the floor, but best of all look at the Christmas tree, all decorated with presents.

Then comes jolly old Santa, all dressed in his red cloth suit and white fur. He goes over to the tree and distributes the presents. The presents are all tied up with pretty ribbons. Then he begins to distribute the presents on the floor.

Then we turn around and see the fireplace and the empty stockings that we hung there the night before, and now just chuck full of candies and little things and we begin to take out the things to see what is in the very toe. Then we begin to unwrap the packages, very eager to see what is inside such funny shaped bundles. Mother blows out the candles and we all go in to breakfast, and such a breakfast, all hot and ready to eat and just think what a merry Christmas we do have!

Don't you think that is the jolliest part of Christmas?

GRANDMA'S CHRISTMAS

By Wilma Kemp, Cupertino

The part of Christmas that I enjoy most is Christmas eve. Our Christmas tree is gayly lighted with many bright candles. It also contains bells, tinsel, popcorn strings and other pretty decorations, the result of much work and care. The room is filled with a woodsy odor from our tree which stands in the center of the room. We all sit around it, the only light being from its glowing candles. Nuts, apples and popcorn are passed around, and a Christmas story is told by Grandma. She tells us a story from her childhood days. It is like being taken back many years as we listen to her.

"When I was a little girl of about ten," she begins, "good times were few and far between, but Christmas was never forgotten by anyone, whether young or old. The day before Christmas Bob and I drove out horse to the woods for a tree. The

The Cultivator Patterns

BE SURE TO SEND SIZE

3044. Misses Dress. Cut in 3 sizes: 16, 18 and 20 years. Size 16 will require 3¼ yards of 44 inch material. The Skirt measures 1 2-3 yard at the foot. Price, 10 cents.

3059. Girls' Dress. Cut in 4 sizes: 4, 6, 8 and 10 years. Size 10 requires 3½ yards of 44 inch material. Price, 10 cents.

2709. Ladies' Dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 4 6inches bust measure. Size 38 requires 6½ yards of 36 inch material. The skirt measures about 2¼ yards at the foot. Price, 10 cents.

2657- Child's Short Clothes Set. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. Size 4 requires 3¼ yards of 27-inch material for the dress, 1¾ yards for the petticoat and 2⅞ yards for the combination. Price, 10 cents.

3046-3048. Business Costume. Waist 3046 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 will require 2⅝ yards of 36 inch material. Skirt 3048 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires for a one-piece skirt, 2⅝ yards of 48 inch material if cut crosswise, and 2⅛ yards of 54 inch material if cut lengthwise. With front and back seams—2¼ yards of 54 inch material will be required if cut with front edges straight, and 2¾ yards if front and back edges are cut bias. The Skirt measures about 2½ yards at the foot. Two separate patterns, 10 cents for each pattern.

3051. Girls' Coat. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. Size 12 will require 4¼ yards of 44 inch material. Price 10 cents.

3045. Ladies' Envelope Chemise. Cut in 4 sizes: Small, 32-34; Medium, 36-38; Large, 40-42; and Extra Large, 44-46 inches bust measure. Size Medium requires 2⅝ yards of 36 inch material. Price 10 cents.

3062. Boudoir Set. Cut in 4 sizes: Small, 32-34; Medium, 36-38; Large, 40-42; and Extra Large, 44-46 inches bust measure. Size Medium requires ⅝ yard for the cap, and 3⅜ yards for the sack, of 32 inch material. Price 10 cents.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH

How to Order Patterns

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest Chicago styles, all pattern orders are filled in Chicago. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

was a drive of three miles. We picked out the tree we thought prettiest and put it on our sled. We didn't have the bright decorations that you children have tonight. We strung berries and popcorn and made our own candles. This was certainly tedious, but we enjoyed it greatly. After we had added the finishing touch to our beautiful tree, mother covered over the fire and told us to scamper off to bed. I went to bed only to lie awake trying to think of what I would get. When morning came, I was the last to awaken. Father called us into the parlor where our tree was and told us to get our presents. Mine consisted of a corn cob doll and some other trifle, but I was very happy and thought my presents two of the finest in the world."

THIS WEEK'S PATTERNS

The graceful misses dress 3044 has what the best makers of dresses strive always to secure—lines. In fact that is all there is to it, simply a soft material which depends on fitting, neat making and carriage of the wearer for its effect. In silk or wool jersey, any of the popular knit weaves, tricolette, tricotine, any soft wool or silk it will be charming. And remind daughter not to slump too much when she wears it. The number of round shouldered young girls is painfully increasing due to the ungainly "debutante slump" recently popular.

A good coat style for little girls is shown in 3051. A plain pattern such as this developed in substantial material is good until it is grown out of. Don't be tempted by new material unless it is all wool and closely woven. The shabby and shoddy materials which have been foisted upon us by unscrupulous manufacturers with "war and labor" excuse are fit only to be left on the shelves and turned back to those manufacturers with request for honestly made cloth. There is good material to be had—and even at reasonable price—but shoddy is expensive if it is given away.

The boudoir set 3062 is exquisitely dainty and would be dear to the heart of any girl—that means girls of all ages. It is graceful, simple, washable and becoming. The simple embroidery is characteristic of the "smartest" of this season's wear. We would suggest georgette, pussy willow, flannel, challis, soisette, chambray in plain material with embroidered edge in dark contrasting color. Soisette is a very satisfactory material by the way—and cheap. It is very soft and silky in texture, wears well and may be purchased in soft dainty shades.

The child's set, dress, petticoat and combination, will appeal to any woman.

HOUSEHOLD QUERIES

Thousand Island Salad

I noted in a recent number of the Cultivator that you asked for a recipe for Thousand Island salad so I am sending you mine which calls for a new variety of French dressing. Cut lettuce in eighths lengthwise. Arrange for individual service and pour over the following dressing: Put in pint glass jar one-half cup olive oil, juice of one-half lemon, the juice of one-half orange, one-half teaspoon of grated onion, one tablespoon of finely chopped parsley, eight olives (from which stones have been removed) thinly sliced lengthwise, one-half teaspoon of salt, one-fourth teaspoon of paprika, one-fourth teaspoon of mustard and one teaspoon of Worcestershire sauce. Cover and shake vigorously until smooth and slightly thickened. Chill thoroughly and shake again just before using. If Southern lettuce is not at hand this dressing is good placed on any salad green.—Mrs. Ross Sloper, Kerman.

Another

Some reader inquired in recent issue of this paper about Thousand Island Dressing, and as I noticed the suggestion of the editor and feel that it does not cover the subject I hasten to give you recipe as it is used by leading hotels here and abroad: One cup mayonnaise, two teaspoons chili sauce, chopped green pepper and chives, two chopped eggs (hard boiled), little taragon vinegar, two drops Worcester sauce. With best wishes to your useful paper.—Mrs. R. Blazek, Bishop.

HOW TO CLEAN LACE

Measure before washing it, as in the case of curtains or collars, it is important to keep the original size and shape. Very delicate lace should be basted carefully on a piece of cotton cloth and washed on that to prevent straining the lace. Wash in lukewarm water and soap solution, squeezing rather than rubbing out the dirt. Bleach by setting in direct sunshine and keeping moist with soap or borax solution. Rinse thoroughly. Restore a faded cream or ecru color by rinsing in clear coffee or tea and stretching immediately; the color of the liquid as seen through a tumbler held up to the light should be the same as that desired in the lace. In drying, stretch on a padded board and pin into its original shape and size. Net or lace curtains may be pinned to a sheet on the floor or, better, placed on a curtain stretcher adjusted to the desired size.

Lace may sometimes be cleaned by covering it with warm French chalk, allowing it to stand overnight and then shaking thoroughly.

CLEANING WITH GASOLINE AND BENZINE

Never let a careless person use these inflammable cleaning fluids.

Use out of doors; in the shade; away from flame or fire; in a cool place; never store in the house.

GROWING OLD

It sounds paradoxical, but the way to stop growing old is to grow.

Most of us stop growing, wilfully, deliberately and unnecessarily. Then we begin to grow old.

We let the mind follow the body, let our thought processes get fat, flabby and gray haired.

The mind was not meant to do anything of the kind.

The mind can hop and jump just as well at 60 as at 16.

The mind can dance, even though the legs get rheumaticky.

Not enough of us realize this.

We think we must stop reading when we have left school, and that there is no need of continuing to learn once we have acquired a trade or profession.

Youth is a state of development. So long as we have something ahead to develop for, we will remian young.

Bodily growth furnishes us inspiration for the first twenty years or so. After that we must produce it from our own intellects.

If we fail to produce it, we come to a standstill and begin to grow old. — Houston Chronicle.

Mark spots with white thread; otherwise they are hard to find after the whole garment is wet.

Immerse the whole garment in the bath. Take out spots by rubbing very lightly between the fingers.

Wash as you would with water; a hand washing machine is excellent.

Rinse in clean liquid, changing it until it remains clear. If too little is used, the garment will look grimy.

Dry out of doors.

Used gasoline may be strained through muslin and used again for the first washing but never for the final rinsing.

DRY CLEANING WITH POWDERS

Powders used in dry cleaning are French chalk or magnesia, fuller's earth, corn meal, sawdust, etc.

Warm the meal or powder.

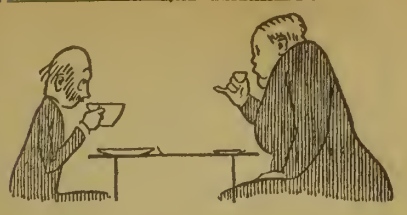
Spread it on the material and rub it in either with the hands or with a brush. Let it remain at least several hours.

Renew the powder or meal as it becomes soiled.

If one treatment is not enough, cover again with warm powder or meal and let it stand overnight.

Be sure to brush all powder or meal from the garment.

This method is especially good for collars or other parts which show soil before the rest of the garment.



How many cups per pound will Schilling Tea make?

How large is your cup? How strong do you like your tea? How long do you let it stand on the leaves?

Tell us all this, and we'll tell you how many cups.

We'll say this anyway: Schilling Tea costs less per cup than any tea we know of—and certainly less than any tea selling at a lower price.

There are four flavors of Schilling Tea—Japan, Ceylon-India, Oolong, English Breakfast. All one quality. In parchmyn-lined moisture-proof packages. At grocers everywhere.

A Schilling & Co San Francisco

Delicate Children

Malnutrition is not overcome with tonics or drugs, but by adequate nourishment. A child pronounced delicate, over-thin or anemic needs

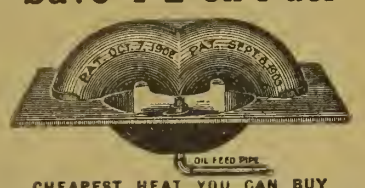
Scott's Emulsion

Parents nearly everywhere know its power to nourish and strengthen. Children of any age take Scott's with pleasure and thrive on it.

Scott & Bowne, Bloomfield, N. J. 19-89

TRY KI-MOIDS FOR INDIGESTION

Save 1-2 on Fuel



CHEAPEST HEAT YOU CAN BUY

The Sievert Oil Burner burns distillate costing only 8½ cents per gallon in cook stoves, heaters, furnaces, pasteurizers, boilers, prune dippers, dairy sterilizers, etc. Absolutely safe, odorless, very convenient and low priced. MAKES HEAT AT HALF WHAT WOOD AND COAL COSTS. Install it yourself. Write for circular and prices on different sizes. Address Sievert Oil Burner Co., 710 North Main St., Los Angeles.

Cut The Shoe Bills

Better Work Shoes at Less Cost. Easy on Feet. Give complete protection against water and cold. Save your health. Relieve foot troubles. Thousands of users—farmers, dairymen, miners, concrete workers, etc.—everywhere are enthusiastic in praise of

OVERLAND EASY WALKING Aluminum Soled SHOES

Made in several styles and sizes. Fit the feet perfectly. Materials, workmanship and satisfaction guaranteed. Get your catalog at once. It tells the whole story. Write today.

Actual Money's Worth

Better tires,—because they have proved it. Extra dollars' worth that can be *counted* in longer life, greater mileage,—better *service.*

The value that is built into United States Tires shows in the wear,—in the usage. They are *bound* to make good for the user until the last inch of the last mile.

Sold on a basis of *quality,* and guaranteed without restrictions or limitations,—by the oldest and largest rubber organization in the world.

You can't go wrong on United States Tires. You may rely on them. Five different types,—and all good. You will find them at your nearest United States Tire Sales and Service Depot.

United States Tires are Good Tires

THE EARTH HAS GROWN OLD

The earth has grown old with its burden of care,
But at Christmas it always is young;
The heart of the jewel burns lustrous and fair,
And its soul full of music breaks forth on the air,
When the song of the angels is sung.

It is coming, old earth, it is coming tonight!
On the snowflakes that cover thy sod
The feet of the Christ-Child fall gentle and white,
And the voice of the Christ-Child tells out with delight
That mankind are the children of God.

The feet of the humblest may walk in the field
Where the feet of the holiest have trod,
This, this is the marvel to mortals revealed
When the silvery trumpets of Christmas have pealed,
That mankind are the children of God.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

This week's cover is dedicated to the greatest anniversary day of the Christian world. "The earth has grown old with its burden of care, but at Christmas it always is young," and we are all young as at no other time of the year. May this be the brightest and happiest and holiest of all Christmases for Cultivator readers.

A GOOD TURN

The Boy Scouts have for one of their slogans "Do a good turn daily." To which we may add "Then forget all about it and do several more."

ANDY LOVEJOY

Andrew J. Lovejoy, one of the first and largest breeders of Berkshires, died recently at his home in Roscoe, Illinois. He was a graduate of the University of Hard Knocks and began without a penny but hammered out a successful career for himself. He has many a warm friend in California.

CANNED FOLKS

The Youth's Companion says:

"There are people in the world for whom self-preservation is a process of canning."

This is rather a reflection on the canning process which is so extensively used with California fruits, and there is considerable difference in the value of canned fruits and canned people. The process of canning extends the usefulness of the fruit, while these self-preserved folks have little of usefulness to extend.

GROW WOOD

Even in California a bit of fire occasionally adds comfort, more, it gives cheer, especially where it is California grown wood on the open hearth. Stove wood is one of the easiest crops to grow in California. The wonder tree eucalyptus gives very rapid growth and its wood gives one of the cheeriest of fires. There is scarcely a farm in the state but can devote a little space to a woodlot. Even in the form of a windbreak pruning out gives opportunity for increasing the woodpile. Grow trees.

Apropos the season, grow a Christmas tree. No tree is easier to grow and none will give more delight to the kiddies.

BROKE

We all enjoy jollying each other, and especially ourselves, with the idea that we have spent large sums foolishly in Christmas buying. We have even enjoyed the joke sprung by the wag who when asked if he expected to spend a happy Christmas, replied with: "I ought to; that's all I have left to spend." Notwithstanding some foolish spending and even some bargaining with ourselves as to presents received and presents given, it is still a wonderful festival season, and we may well pass on all the happiness we can.

Dont' worry if we are broke. We'll soon recover.

OUR RESPONSIBILITY

Word occasionally comes from some of the larger peach producing sections that the dreaded "yellows" is making deliberate but persistent advance. California has fought the entrance of this disease and the state is yet free, but growers persist in knocking on wood. Only recently a dispatch from Delaware, whose peaches were at one time regarded as the best of the country, stated they have all but disappeared, succumbed to the plague of yellows. As yet there is no cure, and the only method of handling is to prevent entrance of the pest through continuance of our efficient quarantine.

Meantime, better grown fruit, more carefully packed, and marketed with fairness to producer and consumer is the problem which confronts California.

CHRISTMAS GREETINGS

Heartiest Christmas Greetings,
Happiness, Joy and Cheer,
Love and Good Luck attend you
Throughout the Coming Year.

BUILD FOR TOMORROW

A believer in good roads has said: "Roads must be built with the requirements of ten years in the future in mind. Low cost of road building that means high cost of transportation is penny wise and pound foolish."

It has taken the road builder, in fact all of us, some time to appreciate the above truth. Or, if we did build for tomorrow our conception of tomorrow's needs was woefully restricted, and today we are talking of passing ordinances to prevent trucks of large tonnage from passing over our improved highways. Let us provide for the future so as not to unnecessarily handicap farm operations.

THE GOLD OF CALIFORNIA

The state is finishing its shipments of fresh decidduous fruits and beginning a new year with its citrus shipments, and the grand total of these shipments of our fruits comes close to 80,000 cars. Of these the citrus amount to nearly 50,000; grapes, almost 18,000; pears, 4,200; plums, 2,900; fresh peaches, 2,700; apricots, 400; cherries, 335. Now come 25,000 tons of walnuts and almost unnumbered thousands of tons of dried fruits, raisins, prunes, etc. In addition out of the earth we are pulling nearly 300,000 barrels of petroleum every 24 hours. The gold of California is not all in the foothills of the Sierra Nevada. It is surely a wonderfully blest state.

NEXT WEEK

The next issue of the Cultivator will be one which every reader will want to file away. In the first place, or rather the last place in the paper, there will be an index of Volume LIII, and there have been a number of good things in that volume which the reader will find profit in referring to in later months and later years. In the next place, or rather in the first pages of the paper, there will be from a number of Cultivator readers estimates of the past and the coming year, not prophecies, for these men are not prophets, but we have appealed to them to give us help in answer to the question which every day is presented: "What of the future, and how shall the farmer proceed to serve his own family and his country best?" We may say in advance that those who are responding for help along this line are taking a most optimistic view of the future and they are sustaining their optimism by many good reasons for their hopefulness. As a rule, the successful farmer, the successful merchant or the successful industrialist is an optimist.

APPLES OF PARADISE

A remarkable showing of highly colored Delicious apples and other varieties was made at the recent State Fruit Growers Convention at Chico. The display was made by C. M. Burkett of Paradise, Butte County. This beautiful fruit spoke for itself, but had Mr. Burkett needed corroboration of his stories of the productiveness of the Paradise section it would have been afforded by that California pioneer, a 59'er, Byron O. Clark. But the perfection of these apples from Paradise is not mentioned so much to stand out that section as superior to all others, but to draw the lesson of production of various fruits in the section fitted to their culture. In sections producing wonderful apples and pears, in planting stick to those fruits; where the almond flourishes, let it be planted; and in the protected foothills grow the orange or the olive if they have been proven successful. Take the lessons which our pioneers have taught us.

BETTER COTTON

Imperial Valley people are concerned because of the difficulty in securing best strains of cotton seed. Cotton expert Cook of the United States department of agriculture has been investigating the cotton situation in the Southwest for some years. He recently met with representative cotton growers and a committee was appointed to investigate as to conditions in Imperial and Palo Verde Valleys and in Arizona, this committee to learn especially as to seed available for this year's planting and as to methods of improving Southwest produced seed. The cotton boll weevil situation of the South adds a complication. This state is determined to introduce no cotton boll weevil in car lots of seed. It is also thought that if the Imperial Valley can produce clean and dependable seed a great trade will be opened up in supplying seed to Southern cotton growers.

WHO'S TO BLAME?

The National Grange has taken up the matter of profiteering and is calling attention to the present conditions and to the fact that if the consumer wishes cheaper food he is proceeding along the most unfortunate lines in hammering away at the producer as a profiteer. Those who read Mr. Swett's article in a recent Cultivator recall the extremely small proportion of the consumer's dollar which ever reaches the producer. Again, in the city of Los Angeles an effort is being made to reduce the price of milk and this in face of the fact that the dairyman is paying for hay and feed prices never before dreamed. The dairymen through the farm bureau came back at the agitators with the claim that in supplying water to the dairymen to grow feed the city of Los Angeles is making a charge far greater than that of any other section of the state. The Grange sent out a statement, a couple of paragraphs of which we quote:

"Under this condition the demand of people not engaged in agriculture for cheaper food is ill advised, untimely and may defeat its own purposes. The cause of high prices is not out on the farms. There is no relaxation of effort to produce by those who remain on the farms, but a steady drift of people away from the farms. This is due to the inadequacy of return on capital invested, and labor and ability used in agriculture. The Grange demands that pressure directed against food producers in the effort to reduce the cost of food be stopped before it results in such acceleration of the decline in agriculture as will leave the farms and farmers unable to feed the nation. The Grange demands that the complaint against high prices be directed to the place where high prices are caused, the cost of labor and the high profits in food manipulation and distribution and the high cost of the labor, equipment and necessities which the farmer must buy."

Electricity on the Farm

By Arthur L. Dahl

IN the old days many dwellers on our farms found that the nearby town or city beckoned them because of the superior living conditions to be found there, and many farmers did move their families into town and carried on their farming operations at long range. But industrial progress has meant more for rural than urban inhabitants, for the things that make life comfortable have been brought to the farmer and it is no longer necessary for him to go to the city for them. The telephone, the automobile, improved roads, rural delivery and a score more of modern conveniences have emancipated the farmer and his family from isolation, solitude and stagnation, and today our farming community is as much a participant in public affairs as the largest cities. Power farming is lightening the labors of the producers, shortening the periods of labor for man and beast, and insuring greater crops through prompt performance of each phase of farm routine. The tractor engine or the smaller gas engine for belt work are doing the heavy work in the feed lot, the dairy and the wash room, and the lot of the country dweller is gradually being improved.

Even electricity is lending its energy toward helping the farmer, and in spite of the universal adaptability of the tractor the electric motor is superior for use on the farm. The use by farmers of electricity for light and power has until recently been limited on account of the difficulty of securing current, but now the transmission lines of town and city power plants, as well as electric railways, have spread a network of electric feeders over a large part of the country, thus bringing electricity to the gates of many farms widely distant from the centers of electric distribution.

Electric motors, because of their greater flexibility, are more desirable for farm use than gasoline engines or any other form of power. Motors have a smaller number of moving parts and consequently are in less danger of getting out of order, and the one or two bearings require attention only about once in six months. The motor is unaffected by extremes of weather conditions and requires much less attention than a gasoline engine; no mechanical adjustment whatever is required and all problems of fuel or water supply are eliminated. For use around the farm house electric motors are ideal, for by throwing a switch the power is instantly available for operating the cream separator, washing machine, or other apparatus to be used.

Motors have also a greater overload capacity, a more constant speed, and can be easily controlled from a distance. They are also more economical in the space they occupy, as they can be attached to walls or ceilings, or if placed on the floor will occupy only one-eighth as much floor space as a gasoline engine of four times the weight and equal horse power. By using electric motors fire risks are reduced to a minimum, not only because of the absence of boilers, pipes, flues, fire or gasoline, but also because motor driven pumps insure an ever ready water supply, under pressure, for emergency use. Motors are cheaply installed, they cost less to operate, are always available for instantaneous service and are a dependable source of power.

Where there are a number of machines on the farm that are used at different times, it is possible to belt one motor to a series of machines. By this method a single motor of comparatively small horsepower is often sufficient to run alternately one or more machines whose work permits of group installation. For instance, a cream separator can be run after the milking machines have been used, and the bottle washer after the butter has been churned or the laundry mangle has been operated, as is done on many dairy farms. In other cases the dairy farmers mount their motor on a truck and it is moved from one place to another and connected to a particular machine for supplying power. By having the buildings wired at different points, with connecting sockets, it is possible to use the motor where needed.

The type and size of motor suitable for farm use will vary according to the scope and character of work to be done and the kind of electric current available. For alternating current the induction motor is excellently adapted to many kinds of service, and due to the absence of moving contacts is proof against fire risk. Due to the possibility of sparking at the brushes, direct current motors, if used in the barn or where dust or inflammable material is present, should be enclosed to prevent fire danger.

While at first glance it may seem that electric power is too expensive to use on the farm, the cost of this power is found to be reasonable when all factors involved are considered. To arrive at a correct comparison of the cost of the different operations requiring power it is necessary to weigh against the actual expense of electricity such important advantages as saving the time of hired hands, the increase in quantity and betterment in quality of the farm product, the greater convenience, comfort and safety which invariably follow the adoption of electric power. As statistics show that the average horse on the farm works on an average of but three hours a day during the entire year, at a cost of eight or nine cents an hour, and that the average cost of manual farm labor is 15 cents an hour, any power that will do the same work at less cost is justified. Where electric power is available from a central source it can be purchased at prices varying from one to 12 cents per horsepower hour, depending on local conditions, size of plant and the amount of power consumed. The electric motor will run continuously for 24 hours a day and the average life of a well-built motor is considerably longer than that of the average horse.

The average cost of a one horsepower motor is between $50 and $75, that of a horse from $150 to $250; the average operating cost of the motor will be about six cents per horsepower hour, animal labor about eight cents. Manual labor will cost about ten times as much as either horse or motor per horsepower hour.

A one horsepower motor will operate a small cream separator, milking machine, butter churn, bottle washer, water pump, washing machine, vacuum cleaner, grindstone, horse groomer, corn sheller or refrigerating plant. Other motors, ranging from three to 100 horsepower, will operate shredders, ensilage cutters, hay balers, threshing machines, etc.

Electricity is especially suited for dairy farms, and many of the large dairies throughout the country use this power almost exclusively. Vacuum pumps are driven by motors and connected with milking machines; the pumps are also used for distributing the milk, which can thus be kept free from contact with the air until bottled or run through the cream separator and churned into butter, the buttermilk or skimmed milk being fed to the calves and hogs through one continuous system of piping. One dairy reports that by the use of an electrically driven system seven cows can be milked and the milk transformed into its various products in seven minutes. The skimmed milk is fed to the calves before it has lost its natural heat.

In the modern dairy electric motors are used to operate cream separators, water pumps, churns, refrigerators, milking machines, milk cooling circulating pumps, bottle washers, cream testers, milk clarifiers, cream ripeners, milk mixers, butter tampers, milk shakers, curd grinders, casein grinders, etc.

Where an electric motor is available in the farm barn a number of jobs can be performed with it. It will operate water pumps, feed grinders, corn shellers, fanning mills, grain elevators, corn crackers, oat crushers, alfalfa mills, horse groomers, horse clippers, sheep shearers, hay cutters, grain graders, root cutters, bone grinders, hay hoists, cider presses, electric brooders or incubators, tool drills, band saw, or a score or more machines.

In the field an electric motor mounted on a truck can be used for threshing grain, and if operations are desired to be continued at night the motor will supply the necessary light. With an electric motor all fire danger is eliminated in threshing.

Electricity furnishes the safest, cleanest, most effective and convenient system of artificial lighting. It is especially adapted to farm houses, stables and barns where danger of fire is ever present, when oil, gas or acetylene are used. Where the modern farm house is wired for electricity not only can the lighting problem be solved, but the housewife will find that now she can enjoy all the conveniences of her city cousins, for the electric iron will supplement the washing machine and enable the family wash to be done with a minimum of trouble and in record time. The early breakfast can be made palatable by the electric toaster, which supplies crisp, hot pieces of toast while you wait. The dampness of a cool, rainy day can be eliminated by the electric stove that casts a cheery radiance as well as warmth around the room, and a motor driven sewing machine will enable the clothes making and mending to be done quickly and pleasantly.

While it may not be possible, or advisable, to install electricity on many of our farms, yet where the power is available there are a great many advantages to be derived therefrom if the matter is but given careful thought.

Walnut Growers Meet

THE walnut growers of the West Covina-Puente-El Monte section met at the West Covina schoolhouse on December 15 to the number of 30 and listened to an interesting and enlightening program.

The first speaker was Prof. L. J. Fletcher of the college of agriculture, Berkeley, who held the attention for an hour or more on selection of the orchard tractor. He was followed by Prof. Ralph E. Smith, also of the college of agriculture, on the application of fungicides and insecticides by the dusting method. Prof. Smith said in part:

"The application of dry powder spray is not new, for it has long been used in sulphuring for red spider, mildew, etc. Of late the devotees of this method have claimed so much for it that with many it has fallen into disrepute. But in spite of these unwarranted claims it has many advantages over liquid spray, especially in the handling, because of the lighter weight of the materials. Liquid sprays for walnuts would require 25 gallons for a large tree, with a weight of about 200 pounds, while dry spray for the same tree would weigh but 60 to 75 pounds. The dry spray also takes less time and less labor.

"Dust spray is really fumigation, for the materials are gaseous in their action and the fumes are depended upon for effective work. Dry spray mixtures are to be used for aphis on walnuts, sweet peas, melons and other crops where by reason of failure to reach the insects by liquid sprays other methods must be used. Sweet peas are too thick in foliage and vines for sprays to penetrate and aphis stay on the under sides of leaves, so that only fumes may effectively reach them.

"Walnut aphis are easy to kill and a one per cent nicotine spray will destroy them whereas a five per cent mixture is necessary on sweet pea aphis. Experiments are also being made by adding lead arsenate for the walnut cutworm. Lead arsenate is more effective in a liquid spray but

Continued on Page 822.

Agricultural News Notes of the Pacific Coast

Northern California

Japanese own 6,500 acres of land in Butte County.

Susanville, Lassen County, has 16 inches of snow.

Sacramento expects to have a new $750,000 hotel soon.

In Yolo County but 320 acres are owned by Japanese.

Shasta County is already planning a 1920 fair at Fall River Mills.

Hogs are being shipped to Colusa and Glenn Counties to forage in the rice fields.

The Orland, Glenn County, fair left a surplus of $2,000 in the hands of the treasurer.

The rice crop of the Sacramento Valley is approximately 3,500,000 bags, or 175,000 tons.

A factory will be located in Sacramento for the manufacture of powdered buttermilk

Yolo County has received 1,200 Eastern black walnut trees to plant on the county highways.

The Placer County and other realty boards have pledged themselves not to handle Japanese land deals.

A heavy mortality is reported among sheep in Colusa County, feeding on rice lands after harvest.

Woodland, Yolo County, has provided 800 pounds of candy for Christmas distribution to poor children.

The Gold Ridge section in Sonoma County has shipped more than $3,000,000 worth of apples this autumn.

A carload of Thompson Seedless raisins has just been shipped from Arbuckle, Colusa County, to England.

Farmers in the territory from Stanislaus to Butte County hail a "million dollar rain" which broke a long dry spell.

A new tract of 60,000 acres has been reclaimed north of Sacramento between the Feather and Sacramento Rivers.

Plumas County stockmen have combined to keep all but pure bred registered sires from running on the county cattle ranges.

More than five feet of snow is lying about Summit near the California-Nevada line, double the amount at same date last year.

Prune trees valued at $2,000 were destroyed in ten days by gophers on the River Farms tract near Woodland, Yolo County.

Mill Valley, near San Francisco, will allow no Christmas berries to be picked, on account of the destruction of the shrubs.

Sacramento is planning a channel to salt water 30 feet deep, to make the city an ocean port, the channel to be 35 miles long.

A Japanese investigating rice land in Butte County said his countrymen were willing to invest millions of dollars in either buying or leasing lands.

When the California Prune and Apricot Growers Association asked for 200,000 more acres representation, Butte County presented 2,200 acres additional.

C. B. Cunningham, near Sacramento, began 14 years ago with 114 varieties of grapes; now he grows four—Olivette Blanche, Hunisa, Piment and Cazouls.

Central California

Turlock shipped 3,214 carloads of cantaloupes in 1919.

The orange crop of Kern County is estimated at 1,045 carloads.

A school census shows Fresno County has a population of 125,000.

Lindsay, Tulare County, shipped 100 cars of Emperor grapes this season.

Two Santa Cruz whale boats recently captured five whales in one day.

The annual Kings County poultry show will be held at Hanford, December 18-20.

There are 408 pullets in the year-long egg contest now under way at Santa Cruz.

The California Cooperative Canneries will erect a new cannery in Visalia at once.

Reedley and Wahtoke, Fresno County, will each ship 30 cars of oranges this season.

Fifteen cents was the top hog price at the last Stanislaus County farm bureau auction.

Including the first week in December, the Pajaro Valley has received 6.09 inches of rain.

Two carloads of canned peaches were shipped from Tulare direct to England last week.

Two fruit driers at Watsonville, Santa Cruz County, were destroyed by fire on December 5.

Los Banos, Merced County, has bought the city water system from the Miller & Lux estate.

A heavy supply of natural gas has been found at Angiola and all Tulare County hopes to be served with it.

The Merced County supervisors appropriated $1,500 to cover expenses of a county farm home demonstration campaign.

An irrigation district near Merced, embracing 173,000 acres, was voted on and carried by more than two-thirds majority.

The Tulare County horticultural commission protests the shipping in of 359 boxes of apples, saying Tulare can raise its own apples.

Paschel Bequette, Strathmore, Tulare County, reports that he has taken off a $900 crop of queen olives from ten trees ten years of age.

Reports from Central California show if nursery trees were available the present orchard area would be increased 50 per cent this year.

Twenty-two cars of Emperor grapes, from cold storage, were shipped from Fresno, December 4. The cars contained 12,000 drums of grapes.

Heavy rains stopped orchard hauling for the first week in December in the Watsonville district, but shipping of 35 to 50 cars daily continues.

Farmers in Kern County state that the hog auctions added from two to four cents a pound over what they would have otherwise received.

The United States attorney at San Francisco libeled 1,200 cases of dried apples from Watsonville for shipment to Stockholm, Sweden, because improperly labeled.

One of the two giant redwood sentinels at the entrance to the Calaveras big tree grove was blown down last week. It was 225 feet high and 27 feet in diameter at base.

Southern California

Walnut trees are the scarcest of all nursery stock in Southern California.

Steelhead fishing season opened December 15. Ventura reports a heavy run.

Hemet, Riverside County, is to have a factory for the cracking of apricot pits.

Ten cars of walnuts were shipped this year from Hemet, Riverside County.

The two canneries of Hemet, Riverside County, are working full capacity on olives.

Business men of Blythe, Riverside County, urge the paving of the business streets.

Up to December 5 Highland, San Bernardino County, had received 6.20 inches of rain.

Los Angeles and Ventura Counties are to have a joint park at the summit of the Santa Susana Pass.

Orange County papers report the rainfall ahead of last year's at same date and all farmers jubilant.

A Riverside County onion grower sold 90 tons of Spanish White for $100 a ton and one acre produced 14 tons. Next!

The federal experiment station at Meloland, Imperial County, is trying out many new plants suited to desert lands.

Imperial County will spend $50,000 on a highway to the San Diego County line as part of the paved road to San Diego.

An apple grower of Orange County was fined $50 last week for disposing of apples more than ten per cent wormy.

Apricot districts in the south have been notified of a heavy demand for apricot pits to be used in the dye industry.

The autumn dry spell caused the drilling of six wells of good supply in the Carpinteria Valley, Santa Barbara County.

Orange picking at Redlands began on December 2; a hundred cars of navels will be sent East for Christmas trade.

The Palo Verde Valley was cut off from the outside world for four days the last week in November—washouts on the railroad.

The Hemet high school is arranging for a fruit growers' short course in January under direction of the state university.

A Covina orange grower claims his trees were cured of scaly bark and gummosis by the application of much salt in whitewash.

C. M. Loring of Minneapolis gave $1,000 and Frank Miller $500 toward planting with trees the avenue from Riverside to March Field.

The Orange County board of forestry will present property owners with the trees necessary to plant their frontage on county roads.

Pomona Valley reports all irrigation pumps have stopped for the season as the rains have proved sufficient to thoroughly wet the soil.

The highest price ever paid in the Charter Oak section, Los Angeles County, for an orange grove was $4,000 an acre, paid last week for 17 acres.

The Coast and General

Somerton, Arizona, complains of too much rain.

Recent rains and frosts damaged Western Arizona milo crop 20 per cent.

The cotton gin at Chandler, Arizona, was destroyed by fire recently with a loss of $30,000.

The Walla Walla section of Washington harvested a 1919 crop of 8,000 tons of sugar beets.

Winlock, Lewis County, Washington, is shipping a carload of eggs per week direct to New York.

The Papago Indians recently held a fair at Sells, Arizona, the center of 6,000 Papagos who live by agriculture.

The boys' pig club of Chandler, Arizona, raised pigs at an average cost of seven cents a pound and sold for 16 cents.

The citizens of the Casa Grande district of Arizona are taking steps to prevent the settlement of Russians in that district.

A run-down ranch of 11 acres near Yakima, Washington, was cared for for three years and brought $11,000 in produce this year.

In 20 days of October the Hood River Valley sent out 1,434 cars of apples and but 834 cars during the same period of 1918.

The farmers about Chandler, Arizona, want a club house to meet in when bad weather catches them and raised $1,700 in 15 minutes.

A nine acre apple orchard near Prosser, Washington, returned $14,500 for 5,200 boxes of Jonathans, Delicious, Yellow Newtowns and Ganos.

The cannery at The Dalles, Oregon, will pack 75,000 cases of canned apples this season and 25,000 cases of apple butter, all going to Europe.

Chandler, Arizona, held a two-day cotton institute December 12-13 with experts present from the United States department of agriculture.

Apple packers in the Grand View, Washington, district made six to nine dollars a day for amateurs and $75 to $90 a week for experienced hands.

Klamath County, Oregon, distributed this season 5,700 quarts of poisoned wheat for squirrels and 30,000 pounds of poisoned bran for grasshoppers.

A bale of long staple cotton was recently sold in Chandler, Arizona, at auction and reached what is probably the highest price ever obtained for cotton in the United States—$1.1 a pound.

Of interest to long staple cotton growers is the information recently received that the long staple cotton crop of Egypt is about one-fifth less than the estimated yield while the crop of Sea Island will be less than 10,000 bales as against 150,000 bales a few years ago.

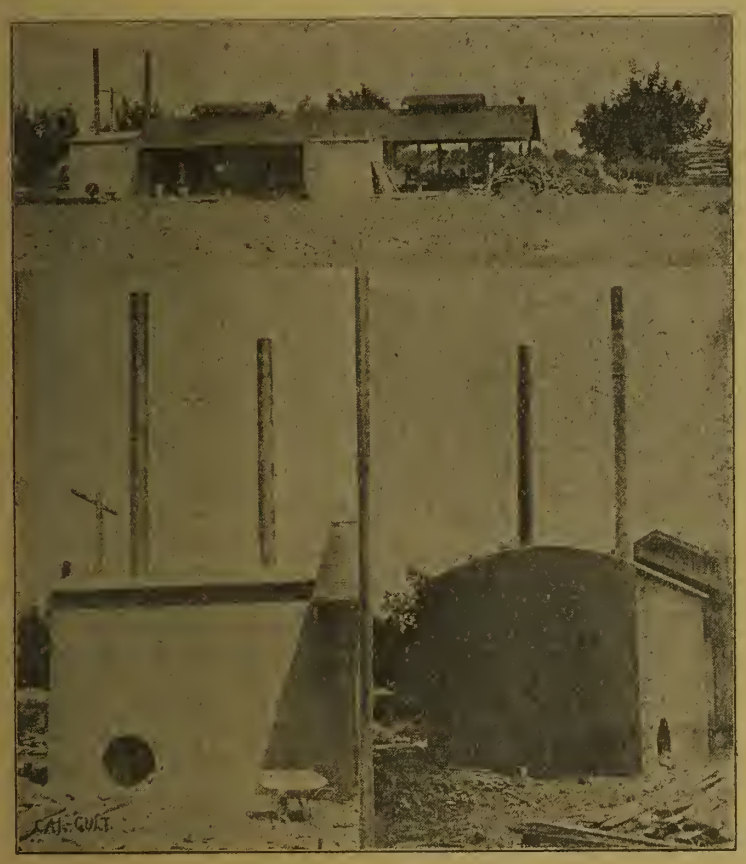
A state council of the national highway system was created in Phoenix November 17. The officers and directors of the Arizona Good Roads Association were made officers of this organization until the next general session, which will be held in Tucson January 26. The principal purpose of the organization for the present will be the consideration of the Townsend bill pending in congress.

Evaporators for Fruits

By W. V. Cruess, Before Fruit Growers Convention at Chico

CALIFORNIA has made her reputation for dried fruit very largely upon such well known slogans as "Sunmaid," "Sunsweet," etc.; that is, the fact that we cure all of our fruits in the sun and not in evaporators has been the basis of our most effective advertising of California dried fruits. Why, then, should we be interested in the artificial evaporation of these fruits?

Is an evaporator as cheap as sun drying? is the first question to be answered. We do not know; but the evidence to be derived from our investigations and from observations upon other evaporators indicates that if we neglect interest on cost of evaporator and on a dry yard of the same capacity, the drying in an evaporator is slightly more expensive than drying in the sun; the approximate difference being about equal to the cost of the fuel used in evaporation. However, if we should consider for the sake of illustration a 50 acre prune orchard and take into account interest on investment, we shall see that when all factors are considered the difference is in favor of the evaporator.



Davis Evaporator at University Farm

Upper. General view. Lower left: Furnace room showing air intake doors. Lower right: Furnace room showing old boiler shell furnace in place.

For a 50 acre orchard about five acres would be needed for a sun drying yard; for an evaporator only one acre would be needed. This difference of four acres in favor of the evaporator on average prune land would mean that by use of an evaporator the grower of this 50 acre orchard could increase his orchard four acres. Four acres of bearing prunes would at present prices and at a yield of one ton of dried fruit per acre bring a revenue of about $1,000; whereas, if the space is used for a sun drying yard the return for hay grown upon this space would not exceed about $100, leaving a difference in favor of the evaporator of $900. Trays to sun dry the prunes from this orchard would cost at present prices about $2,250. At ten per cent depreciation annually the cost for tray upkeep yearly would be $225. An evaporator for this orchard would cost about $4,000. At ten per cent depreciation annually the yearly cost of upkeep would be about $400. The fuel for the evaporator would cost about $10 per day (based upon our tests at Davis), or a total for a 30 day run of $300. Or if we assume that the labor cost is the same for drying and handling the fruit in each case we would have the following comparative estimated costs, leaving out labor costs and packing costs:

Sun drying—Interest on trays, $225; loss of revenue due to using land for dry yard, $900; total, $1,125.

Evaporator drying—Interest on evaporator, $400; fuel, $300; total, $700.

This gives the evaporator $425 advantage. The figures are very approximate and the writer does not wish to convey the impression that the conclusion drawn is accurate or final; but he does believe that artificial drying, when all things are considered, is not more expensive than sun drying.

One disastrous season, such as that of 1918, may cause the grower sufficient loss to pay for several times the evaporator capacity necessary to care for his entire crop. Therefore, as an insurance against rain damage the evaporator is well worth the investment. In some grape growing districts, for example, in Sutter, Napa and Sonoma, it will usually be impossible to dry all of the crop successfully in the sun because of the lateness of ripening and prevalence of cool and often wet fall weather. In these districts the evaporator would be a paying investment as an aid to sun drying every season.

The most beautiful dried prunes that have ever come to the writer's attention were dried by the Wann Bros. of Healdsburg. What they have done others can do. Milo Williams of Oak was paid a three-fourths cent per pound premium for his evaporated prunes as compared to prunes from the same orchard dried in the sun. Prunes dried in the evaporator are of better flavor than sun dried prunes and are free from objection by fastidious buyers upon the score of cleanliness. Drying in the evaporator is admittedly more sanitary than sun drying.

The operation of an evaporator requires much more skill and experience than sun drying and the writer believes, that should every grower in the state immediately undertake the use of evaporators much inferior dried fruit would result and the name of our dried fruits suffer irreparable injury. The tendency of beginners is to overdry the fruit, with the production of a hard, tough and caramelized dried product. Our advice is for the growers to "go slow" on the use of evaporators until they have mastered the art by working with some one who "knows how," or that they hire experienced men to assist.

Do Evaporators Increase Yield?

Mr. Christie and the writer have made over 50 experiments upon this point at Davis, but we cannot compare the yields until we have made moisture determinations. The conclusion to be drawn from the data in the present form is that there was very little difference in the yields in the two methods. Sugar is lost in sun evaporation by insect activity, by fermentation by yeast and by respiration of the fruit. In the evaporator some sugar is lost by oxidation, and as soon as we have made our moisture determinations upon our numerous experimental samples we can determine the relative losses in the two cases. We have demonstrated that just as high yields can be obtained in the evaporator. The question remaining is whether it is possible to obtain higher yields in the evaporator.

Temperature of Drying

In sun drying we need fear no injury from excessive temperatures, but in an evaporator we must constantly guard against this type of damage. Fruit which is nearly dry is susceptible to heat injury and may be badly caramelized or even completely spoiled by holding at temperatures of 160-170 degrees Fahrenheit for several hours. Fruit containing considerable amounts of moisture, however, is much more resistant and will withstand a temperature of 200 degrees Fahrenheit. Fruit will dry much more rapidly at 190 than at 150 Fahrenheit, and this high temperature may be used provided the fruit is removed from the evaporator as soon as it has become dry. Owing to the danger of scorching the fruit by exposing it to high temperatures after drying at 190 degrees Fahrenheit, it will be advisable under most conditions to use temperatures not in excess of 165 or to start the fruit at higher temperatures and finish the drying at lower temperatures. We must state, however, that our experiments with high temperatures were made only with grapes and it is very probable that larger fruits, such as prunes, would not withstand these temperatures without losing a great deal of juice by dripping.

Trays

Fruit upon ordinary field trays dries extremely slowly and therefore this type of tray should not be used. Screen bottom trays permit rapid drying but are attacked by the fruit acids and by sulphur fumes, with the result that the fruit acquires a metallic flavor and often becomes coated with poisonous zinc salts. Trays made with slat bottoms—that is, of narrow strips of wood placed about three-eighths of an inch apart—are ideal in every respect. Drying is as rapid upon them as upon screen trays; they are much more substantial; the fruit does not stick to them, and they are much cheaper. It is very troublesome and expensive to remove grapes from screen trays after drying, but they do not stick to the slat bottom trays. The latter type should by all means be chosen for use in the evaporator.

How It Works

Top: Slat bottom trays were found very convenient to empty—best type to use. Center: Emptying field trays Bottom: Car of loaded trays, Davis evaporator, three-quarters ton of grapes each car. Drier holds eight cars.

Several large ranches in Tehama County will be subdivided. Recent sales show acreages as follows: Pettyjohn ranch, 8,200 acres; Avilla, 5,100 acres; Flournoy, 4,000 acres; Hansen, 1,940 acres; Gallatin, 1,700.

DORMANT SPRAYING PAYS

Dormant spraying, it has been proved, is the most successful means of controlling many injurious diseases and insect enemies. Fruit trees at this time, devoid of foliage, are hardened for the winter and can withstand applications of strong sprays.

Universal Brand Crude Oil Emulsion

properly applied, prevents the accumulation of insect and fungus enemies. It keeps the trees in better health, vigor and fruitfulness. It cleans the trees and disinfects bark wounds.

Crude Oil Emulsion is the best of the dormant sprays — made for this purpose. Place your order with us for your supply—today.

And send for your copy of our bulletins on deciduous spraying. A post card brings it—today.

WALNUT GROWERS MEET

Continued from Page 819.

when aphis are also present it is well to experiment in the hope of catching all pests, so a spray of one-half sulphur, ten per cent lead arsenate and some nicotine will be used, and reports on its effectiveness will be made at the end of next season. For red spider 25 per cent of dry lime-sulphur is the base, though a liquid spray is best. A watch will be kept to see if any of these sprays affect walnut blight, with but a faint hope of benefit in that direction. No sure results are known from applications of some of the mixtures but one more season will determine their value. Such materials are best used on still days and in the morning when trees are damp is better still. Nicotine will give off fumes at any temperature but sulphur only in the presence of heat, therefore it is best applied on hot days."

Die-back of Walnuts

Dr. L. D. Batchelor of the citrus experiment station at Riverside then gave a short talk on die-back and winter injury of the walnut. "These injuries are traceable to one of four causes: early frosts, winter drouth, rise in water table, and the same water rise accompanied by alkali. In the first division the leaves of young trees are killed by early light frosts, about the middle of November, such as kill tomato vines. The twigs then quickly dry out and in December and January are sometimes badly sunburned, but the main cause of death of the young branches is drying out. The chief remedy is to ripen the trees early. This may be done by giving the last irrigation about the middle of August instead of continuing until October, the more common practice. This injury is to young trees only and they recover in one year.

"Winter drouth is injurious mainly to old trees and sometimes kills back three or four years' growth or even the tree itself. The harm comes from lack of soil moisture in the middle of winter, and the remedy is winter irrigation when rainfall is insufficient or too late. If treatment is good these trees may be brought back to normal in two or three years, but trees so injured will produce much sucker-like growth the next summer and this will be hard to ripen before frosts come. Winter irrigation should penetrate to six or eight feet in depth.

"The rise of the water table injures the roots through lack of air and roots submerged for some time are killed. Therefore the injury is equal to a severe root pruning. Trees recover slowly from this injury as compared with freezing, for when the latter takes place the roots are not injured. From these actions one may often judge the cause of deterioration. Cases are known where the water table was down 30 or 40 feet at time of planting but by community overirrigation walnut roots were killed in after years. The best restrictive method is to measure your water by rainfall inches through the medium of miner's inches and not wet down more than ten feet, remembering that an inch or inch and a half of rainfall will wet down a foot, dependent upon the nature of the soil. In alkali injury the same safeguard measures must be observed. These four known causes will enable anyone to diagnose his orchard injuries."

Walnut Codling Moth

Prof. H. J. Quayle of the citrus experiment station at Riverside then spoke on the present status of the codling moth situation. He said in part:

"The proper time to treat these pests is when the first brood of larvae emerges during the first half of June. In the Santa Ana district another brood comes forth about July 15, and in the Carpinteria section this is the only brood, so that but one spraying is necessary. This must be thorough, just as practiced on the apple; every nut must be covered with the poison. This season we shall experiment with both dry and liquid sprays. Dusting has not proven very satisfactory during the past year for every nut must be covered and while this has been done on the lower parts of the trees it has been less effective above. Some method, perhaps by platforms, must be found for reaching all parts.

"Other methods of control are to pick up and destroy all young nuts that fall, for it has been shown that where 40 or 50 nuts to a tree drop all of them were infested. Do not confound this drop, however, with that from the blight which we have found to be 1,700 or more to a tree. While codling moth infested nuts drop at all times, most of them are early. You must not analyze the loss by the dropped nuts, however, for after picking up all these the infestation at harvest has been found to be 20 per cent. Banding the trees helps but the bands must be removed every two weeks or they become harbors of refuge for the worms. The 1919 crop showed far less infestation than that of 1918, due to methods of control. We examined 200,000 nuts from 100 orchards and the highest infestation was 22 per cent on untreated trees and ten per cent on dusted trees. Those well cared for showed but four or five per cent."

Other Speakers

Carlyle Thorpe of the Walnut Growers Association gave data on organization matters and was asked many questions. In answer to one he stated the Franquette was the best of nuts, bringing 37 cents this year, but the production is so low that the trees are not profitable as compared with the varieties usually grown. Farm Adviser Hodgson closed the meeting with a ringing speech in support of the farm bureau movement.

CALIFORNIA PRUNE AND APRICOT GROWERS

H. G. Coykendall, general manager of the California Prune and Apricot Growers, Inc., announced here today that January 20 had been set as the final date by which 20,000 additional acres of prunes and 6,000 acres of apricots must be signed by the association or it would go out of existence.

Failure of the fruit growers to give the required support to their nonprofit cooperative organization, Coykendall said, would mean that the association would decline to exercise its option on growers' crops for the years 1920 and 1921. This, he said, would leave the marketing of these crops in the hands of the independent packers and would throw the industry back into the chaotic conditions which existed prior to the formation of the association.

Emphasizing what the association had meant to the fruit growers of the state, Coykendall said that the association had already paid out almost $15,000,000 to its grower members for their 1919 crops and he estimated that the association would put $22,000,000 into their pockets when the final settlement is made.

The California Prune and Apricot Growers, Inc., is the state-wide growers organization which was organized May 1, 1917, as a selling organization with the announcement that it represented three-fourths of the prune and apricot growers of the state.

DELICIOUS APPLE

Dr. Hedrick of New York writing in the Journal of the International Garden Club of some of the more recent fruits which are proving successful in America refers to Delicious apples which have been so successful on the Pacific Coast. He says:

"Delicious carries off the palm of merit among novelties in apples. No other new apple of the times has been more generally planted or better received by consumers and growers alike. Delicious was introduced in 1895, since which time its culture has spread throughout all the apple districts of the United States. In the orchards of the West and Northwest it has been extensively planted and has proved a great commercial success. As grown in the East, it is smaller and not as handsomely colored as when grown in the West but has even more distinctive flavor, though it is handsomely colored and quite large enough for a dessert fruit, and with its five-crowned apex is unique and attractive in appearance. Contrary to the usual behavior of apples, the fruits of this variety increase in size and color as the trees grow older. Its faults, in the East at least, are susceptibility to water-core and to apple scab. Delicious is worth trying in commercial plantings wherever apples are grown in the United States, and every land owner should plant a few trees in the home orchard. This variety was found in 1881 by Jesse Hiatt, Peru, Iowa, and the original tree is still in productive bearing. The variety was introduced by Stark Brothers, Louisiana, Missouri.

"Tree large, vigorous, hardy, productive. Fruit large, uniform, roundish-conic, ribbed, light yellow, nearly to almost entirely overspread with dark, attractive red, splashed and mottled with carmine; flesh yellowish, firm, a little coarse, tender, juicy, aromatic, pleasantly subacid, good to very good; season December to last of February."

EL DORADO PEAR ORCHARD ESTABLISHES RECORD

A phenomenal yield of pears from his six year old trees was obtained again this year by W. A. Caldwell of Camino, El Dorado County. The yield is attributed by Caldwell to the pruning system used. From 710 Bartlett pear trees a yield of 2,100 boxes is reported, while 364 boxes of Winter Nellis pears were secured from 95 trees. One tree produced nine boxes of Winter Nellis pears, while the prize Bartlett yield from one tree was a little over eight boxes. The fruit is of unusually high quality and top prices have been obtained in the local market this year, the same as in 1918.

The Caldwell orchard was planted five years ago on land which was considered not particularly good as compared with other land in the district. It had been farmed since the pioneer days and was poor. This was overcome by a system of pruning and fertilization. Conservation of water was necessary.

Instead of pruning his trees heavily each year, Caldwell tied the limbs down as soon as the framework was formed. Long canes were brought down until they were within reach. The shears were used only to properly direct the canes and to thin out crossed branches or branches which were out of place. When bent down the limbs develop an unusual number of fruit buds and throw out canes again at the angles. These are also bent down and the result is that all limbs are in easy reach of the pickers, an enormous bearing surface is formed and only a minimum of props is necessary.

SUN SCALD ON TREES

Dr. J. C. Whitten says that nearly all the good things he has found out about fruit trees came from investigations resulting from questions asked by fruit growers which he could not answer. They repeatedly asked him when to whitewash for sun scald on fruit trees. It does not show until summer and then an examination of the cells under the bark show they were dead and brown. When did this damage occur? It was supposed it came with the first hot weather, but in tracing back the origin it was found the damage was done when the trees were set out.

Thermometers fastened to the trees in winter showed that, owing to the brown coloring matter in the bark, heat was absorbed nearly as much as in the case of carbon, the greatest of all heat absorbents. On a hot day the temperature of the young tree would register 30 degrees higher than the air surrounding. When the sun went down the temperature dropped to that of the air and perhaps a frost came at night. Inasmuch as the heat had made the cells active and tender, the cold severely injured them, and thus resulted the sun scald. On a hot day in summer it was found a thermometer registered 30 degrees lower amid the cool foliage than it did when removed to shade away from plant life. Dr. Whitten advises whitewashing the entire tree when planted with a mixture of seven pounds lime, two pounds sulphur, one pound salt. Rains will not wash this coating off and the tree is always as cool as the air.

COLORADO POTATO BEETLE

California potato growers were given a scare a short time ago when a car of potatoes was received in the state and the inspector's once over resulted in the capturing of some 50 husky live Colorado potato beetles. The car was promptly ordered outside the state limits and is perhaps still going. Thus far this pest of the potato field has never secured a foothold in California, and the potato growers hope to prevent it from ever getting a start.

"I SAVE two to two and one-half hours daily on a 22-mile milk route with Goodyear Cord Pneumatic Truck Tires and find milk travels in better condition than in my solid-tired truck. Three teams would be required to do the same work done by the pneumatic-tired truck."—Frank Leibel, Farmer, Newbrighton, Minnesota

MANY farmers, like the one quoted above, know that a pneumatic-tired truck saves much time, drudgery and expense.

They know that this is a very valuable saving in these days of high labor costs and when markets must be reached more promptly than ever.

For pneumatic tires free a motor truck from the handicaps imposed by solid tires; they give it utmost traction and cushioning for all-around utility.

Rural users of Goodyear Cord Pneumatic Truck Tires load in the fields, reduce market hauls by hours and get top prices for perishables and live-stock, sometimes injured by slower, harder transport.

By helping other power-driven farm machinery to work to capacity, Goodyear-Cord-equipped trucks enable farmers to secure the full benefit of motorization.

While pioneering the development of pneumatic truck tires Goodyear has widely investigated the benefits secured by farmers employing them as above.

Consequently, further information concerning the use of pneumatic-tired trucks on farms may be obtained from The Goodyear Tire & Rubber Company, at Akron, Ohio.

Choosing Your Tree

By Ernest Braunton

WE are so accustomed to the term "training the tree" that choosing would seem to be foreign to the usual methods; and so it is in part. The writer recently paid a visit to the orchard of J. P. Englehart, Glendora, originator (by selection) of the Gold Nugget orange. In Mr. Englehart's lemon orchard he will show you four grades of trees, probably all budded from the same tree, perhaps from more. But the trees vary greatly, and herein comes the prospect of gain from keen discrimination in choosing the buds. Two young trees growing side by side, of like size, yielded last year one-half box and six boxes respectively. The one yielding the half box was the larger, yet it had been pruned 36 times, while the smaller tree bearing six boxes had been pruned but once. It is evident the poor cropper would make a much larger tree. This tree Mr. Englehart calls a beef or shorthorn tree. The smaller one is a butter or Jersey tree. That tells the tale; the more vigorous trees in an orchard, if judged by wood growth, are not the producers.

There are three kinds of trees in the vegetable kingdom, grown for three different products—for wood, for flowers, and for fruit. And they may all be found in lemon and orange trees, in whole or part. And that gives us our cue. One tree may show all three kinds of wood. It is evident then that the citrus grower must leave the fruiting wood and cut out that bearing flowers or fuel only. That principle is one of the foundation stones upon which the Englehart pruning system is built. A tree will be shown the visitor, which has never been pruned, that bears three kinds of wood—fruiting or black wood, white wood, and sucker wood. Cut open the three branches of same size, and the fruiting wood is very fine grained and solid throughout. The sucker wood contains a large pithy center; the white wood or drone wood has some central pith, about midway between the other two. One must learn to recognize the kind of wood predominant in each tree and suppress or encourage as is needed. The young tree with all fruiting wood needs no pruning and the lower per cent of fruiting wood a tree has the more pruning it will need. For the best wood must be left and the other cut out. In spite of this the tree cannot be made first class, but if taken young may be raised from fourth to second grade, no higher. From this it is evidently folly to prune all trees alike.

J. P. Englehart and His Record Tree

This little tree bore eight boxes of lemons in 1918 and has never been pruned for it has none but fruiting wood, the highest type of tree for bud supply.

A poor branch or growth on a Grade One tree would prove a fine one on a fourth grade tree. Therefore a branch cut from the best tree would be the very one to leave on the poorer tree. Again is shown the necessity of trained and educated pruners. Mr. Englehart has one young tree but six feet tall that last year bore eight boxes of lemons and has never been pruned. This is the best tree in the orchard. There is no wood to be pruned away for all of it is bearing wood. The poorer trees must be brought up to as near this standard as is possible by wood selection through intelligent pruning. That is why this article is headed "Choosing Your Tree." This best tree is good in every part and no mistake could be made in taking buds indiscriminately, for it is a royal performer. Trees built up from sucker wood, that real vigorous type, have been watched by Mr. Englehart for many years. He had three budded from such wood. They are the "beef" trees of his orchard, the largest he has, and the poorest in crop record. He says such trees are usually good performers for four to six years, after which time they deteriorate rapidly in crop production. There is a tree in the orchard top-worked with buds from one suffering badly from mottle leaf, but no better branches may be found in the orchard. This goes far to prove that mottle leaf is due to soil conditions or general treatment and is not a character that can be transmitted through the bud, or not a character of any tree, but a condition due to exterior influences.

Again, Mr. Englehart budded from a branch which bore corrugated and tuberculated fruit, what would be dubbed a "spiny" lemon. This character in its entirety was transmitted through the buds. This goes far to prove it is the fruit characters we must look to in choosing budwood. There is one large tree budded from sucker wood and beside it one of same age budded from a tree bearing a heavy crop. The large tree last year bore ten boxes of medium oranges, the smaller tree 13 boxes of high grade fruit. Mr. Englehart tries many experiments, but one other must be mentioned as being quite on another line of investigation. For three years the lemons were gathered separately from three trees, one of fruiting wood, one of white wood, and one of sucker wood. All were treated and cured alike. The fruits from the best tree showed one per cent decay, those from the white wood about ten per cent, while the lemons from the sucker wood tree were a 20 per cent loss. Surely there are valuable lessons to learn in bud and wood selection in both propagating and pruning. Choose your tree.

MORE AND BETTER SEED

Seed certification has been contemplated in California for some time. Until this season, however, it has not had the official recognition of state departments. Mr. Hecke has now appointed W. V. Shear potato seed inspector. Also, farm bureaus are taking a greater interest in potatoes and realize the necessity for greater pro

100 Cents on the Dollar

THE tractor that is really a 100-cents-on-the-dollar investment for the farmer is the tractor that can be used practically every day of the year, one that is 100% efficient, both on the belt and the drawbar.

The **International 8-16 kerosene tractor** meets the above specifications. The drawbar has a wide range of adjustment both up and down and sidewise so that the tractor will pull any machine or implement on the farm with equal advantage. The 8-16 pulley is so placed that the tractor can be backed into the belt quickly—so placed also that the belt doesn't rub against any part of the tractor nor drag on the ground. And 8-16 power is just right—neither too heavy nor too light—it *fits* practically any drawbar or belt power task on the average farm.

Aside from its adaptability for all-year-round farm work, the **International 8-16 tractor** is a 100-cents-on-the-dollar investment because of its exceptionally efficient and economical (kerosene) operation; because, too, you can always secure repair and expert service without delay through the 92 branch houses scattered over the United States. Your dealer—wherever he is—has a Harvester branch in easy reach.

If you are interested in a 100-cents-on-the-dollar tractor investment just write your name and address along the margin of this advertisement and mail to the address below so that we can send you full descriptive information of the **International 8-16.**

duction in this, one of the best of potato growing states.

There was recently held in Los Angeles, under the direction of the Los Angeles County farm bureau, a conference of potato growers which was attended by seed growers of various sections of the state. At that time it was determined to organize a certified seed growers association. While the constitution and by-laws of this organization have not yet been accepted and completed, officers have been elected and are proceeding to perfect plans for a far greater production another year and for proper recognition of the few certified potatoes which have been produced this year. There has been grown during the past year approximately 400 acres, the greater portion of which will probably qualify as certified seed. Mr. Shear is making the rounds of these various fields and finds some exceptionally fine stock. The officers of the new association are: President, Geo. H. Peters; vice-president, T. H. Lambert; secretary, J. Olsen; directors, E. D. McSweeney, H. A. Hyde, S. S. Rogers and Mrs. Hilda Neilsen.

At the Los Angeles meeting addresses were made by Messrs. Shear, Gordon, Hodgson, Milbrath, G. H. Hecke and Prof. John W. Gilmore of the university who spoke at length on five factors which qualify a potato for seed. These five factors are: Freedom from disease, productive power, viability, size and uniformity. The speaker laid special emphasis on the necessity of obtaining seed free from disease, on the value of planting different varieties of potatoes, on rotation, and on the selection of sound, productive tubers for seed purposes.

California is not the pioneer in seed certification, though it is a close second, Wisconsin having been the first and today growing the greatest number of potatoes of any state in the Union. California is today shipping around 5,260 cars of 300 sacks to the car.

One handicap in the potato industry in California is the great diversity of varieties. Every section grows too many and those who have studied the question are urging closer study as to the best for each section and centering on that variety. In Southern California the greater portion of the commercial crop is made up of White Rose, approximately 80 per cent; British Queen, 20 per cent; in the delta section, Burbanks, 80 per cent; American Wonders, 20 per cent, with White Rose beginning its planting. In Sonoma County British Queen and Late Rose are favorites.

CHLORIDE OF LIME CURE

In the year 1899 I advised the Southern California Fruit Exchange to wash the fruit with a weak bluestone solution as a preventive measure against fungi. They could not afford to do it, but sometime afterward this same advice was given by a government expert, and they found that they could afford it and are now doing it with good results.

About the same time I advised the use of chloride of lime for bleaching walnuts. I note that it is now being done successfully.

Now will someone try chloride of lime as a wash about the base of trees likely to be attacked by borers (peach and other fruits), and fungi (citrus)?

By the action of carbon dioxide in the air this material will slowly give off chlorine, which is a most deadly gas to both vegetable and animal life; but I am tolerably certain the trees themselves will not be affected unfavorably. This ought to be tested on a few trees before risking many.

I want to advise further that a very small ball of this material thrown in the holes of squirrels or of gophers will either kill them or drive them away. If it will accomplish this it would probably be the cheapest way of getting rid of these pests.

Will readers who may make these tests report the results in the Cultivator?—R. R. Snowden.

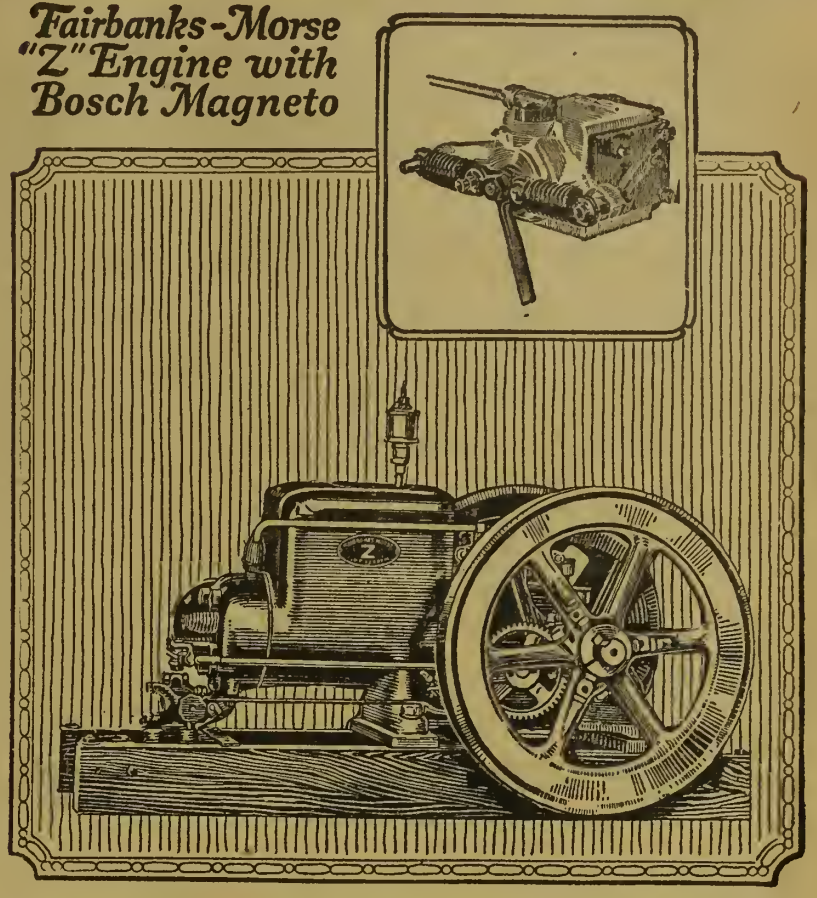
A NATURAL INQUIRY

"I should like a porterhouse steak with mushrooms," said the stranger, "and some delicately browned toast with plenty of butter."

"'Scuse, me, suh," interrupted the waiter. "Is you tryin' to give an order or is you jes' reminiscin' 'bout old times?"

The Greatest Combination

Fairbanks-Morse "Z" Engine with Bosch Magneto



WHEN the full meaning of this "Z" message is realized—mighty few farmers in America will fail to at once call on the nearest "Z" engine dealer. ¶ This example of master engine-building must be seen. ¶ Type and pictures can but suggest this value establishing achievement. ¶ By adding this one possible betterment—Bosch high tension, oscillating magneto—we complete a rare engine service, fully maintained by over 200 Bosch Service Stations in co-operation with every "Z" engine dealer—for all "Z" engine owners. ¶ Prices—1½ H. P. $75.00—3 H. P. $125.00—6 H. P. $200.00—All F.O.B. Factory.

TOP DRESSING TALKS, No. 3

Does It Pay to Top Dress Grain?

"Considering the state as a whole, it (the College of Agriculture) feels reasonably safe in saying that by the use of 100 pounds of Sulphate of Ammonia**** an increase can be made of 6 bushels of wheat or 10 bushels of barley per acre, provided it is applied to land adapted through climatic and soil conditions to the crop in question." **(Professor Thomas Forsyth Hunt in California Circular No. 169.)**

ARCADIAN
Sulphate of Ammonia

Arcadian Sulphate of Ammonia is the safest and most economical carrier of nitrogen for California soils. In addition to supplying quickly available nitrogen in a non-leaching form it supplies an abundance of sulphur, a plant food element often lacking in California soils. It is **"The Great American Ammoniate."**

Sulphate of Ammonia is the well-known standard article that has done you good service in your mixed fertilizers for years past.

Arcadian is the kiln-dried and screened grade, made fine and dry for top dressing purposes. Ammonia 25¼ per cent. guaranteed. Made in U. S. A.

-fruit TREES

Do You Intend Planting This Season?

If so, you should place your orders at once. The demand is heavy and many varieties will be scarce.

We specialize in fruit-bearing trees and our Catalogue contains very complete descriptions of all the best known varieties.

Let us know what you are thinking of planting, character of the soil, water, etc. We are always glad to answer questions or to advise with planters as to what is best suited to their soils and localities.

Fresno Nursery Co.

P.O. Box 615-C **Fresno, Calif.**

This Folder Tells You How To Make Your Idle Land Earn Money

This is the day and age when you should make every foot of land produce profits for you. If you have any size tract ranging from 80 to 5,000 acres in the Western States that need development you should send for this book at once. It tells you the way to develop your property through the use of Hydro-Electric plants, gravity irrigation systems, pumping plants, grading, and buildings; in fact, it points out the various essentials that are necessary to make your ranch a producing property.

Now is the time to act, so that you can get a crop from your land next year. It is a certainty that crops will bring good prices next year, so take advantage of this condition and get your land under cultivation now.

Write today, stating location of land and number of acres.

LOS ANGELES

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Picking Pomelos

This is to inquire as to the time of picking pomelos. Should they be taken off the tree when partly colored and allowed to cure like lemons or be left on trees till ripe? How is ripeness indicated? If cured, how and how long? Any information will be acceptable. Should navel oranges be taken from trees before the navel end is fully colored (to insure maximum sweetness)?—"Subscriber, Madera."

The time to pick pomelos is when they are ripe, which in most sections of California will not be for many weeks yet. Ripeness may be indicated, but not guaranteed by any means, by the color. The present season's pomelos are, however, offered in practically all markets of California. So far as we have seen these are unfit for human consumption. We do not know whether the eight to one test required with oranges was made to apply to grapefruit, but believe not. As to the picking of navel oranges the state requirements are: "Oranges must be free from insect and fungous pests, virtually free from frost injury or other serious defect. Sugar content (soluble solids) eight parts to one part of acid and 25 per cent yellow or orange color before picking if test is less than eight to one." There is also a certain federal standard, but this does not concern the grower unless he sweats the fruit before shipping. Maximum sweetness is not secured until the orange is fully colored, has no tinge of green color.

Manure—Green Manure

Please give value of corral manure as compared with cover crop for silage corn.—Subscriber, Baldwin Park.

It is impossible to give definite answer to the above in dollars and cents excepting for the chemist who may have in hand some of the manure or corral scrapings. These scrapings, if they have been out in the recent storms, may have lost much of their value. And again, the tonnage and other questions connected with the green manure crop are vital to determining its value, but in a general way it is to be presumed that the stable manure has a higher value, is much more quickly available than green manure, in fact, we think it is generally admitted that stable manure, all things considered, is our best soil builder. However, it is some months before the time for planting ensilage and the soil may well be used to build itself up. It is probably too late to get much tonnage from the legumes, which would have done better if planted in September or October. But barley or rye may be planted, to be plowed under a few weeks prior to seeding to silage. If seeded to winter growing crop an application of finely pulverized phosphate rock or bone meal will give bigger cover crop for turning under and at the same time be available for next summer's silage crop.

Grafting or Budding

When is the proper time to graft and bud fruit trees? — Subscriber, Lompoc.

This depends upon the kind of tree, the season, and a number of other things. The citrus tree is often budded in the fall, say in October, and so treated that the bud remains dormant until spring. Again it may be budded in March or May when the growth is strong and of course the sap flowing freely. Budding of peaches or other deciduous trees is usually done in the spring and the grafting of most trees when they are dormant, or just before the growing period of the spring time.

Lumps in Udder

Touching upon "Lumps in the Udder," a question which was answered in the veterinarian's department issued November 22, age 688, N. H. Locke of Lockeford writes:

"The probability is he is improperly milking his cow, causing milker's boils. Use Watkins salve until healed. Do not pinch the udder in milking."

Sugar Cured Meat

I am enclosing an old time formula which I have found good.

Meat 100 pounds, salt ten pounds, sugar four pounds, saltpeter two ounces. Boil and skim and cool. Cut meat between each joint. Dip each piece in boiling brine, cool over night. Put one-half inch of brine in bottom of barrel or jar. Cover each layer in brine in packing and finish with one inch or more on top. Weight well and cover to keep flies out.—J. C. Joplin, Santa Ana.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

Unsigned communications receive no attention.

Injury to Stifle Joint

I have a five year old gray gelding that was kicked on the stifle joint about a year ago. It has been treated by the former owner but is still lame and he can not use the lame leg to back nor step over a wagon pole although he is able to do his share of farm work on a small ranch. There is a bunch on the stifle joint as large as a teacup. What treatment would you advise and will exercise in a barn lot be better for the horse than being tied in a stall? — Subscriber, Butte County.

The exercise will probably be best. After so long standing the case will need pretty strong treatment and that kept up for some time. Blister it. Make a blistering ointment as follows: Use one ounce of cantharides, one ounce of biniodide of mercury and six ounces of lard. Mix it all together thoroughly. Rub about an ounce of the mixture on the bunch and rub it in well, then hold a hot iron about three inches from the bunch to warm it in and then rub it some more. Grease the parts below the bunch with lard so if some of the blister runs down it will not blister there. Tie the horse so he can not reach the blister with his nose for 24 hours, then grease it with lard and keep it soft until the scabs all brush off. In about two weeks repeat the blister as before. Keep this up until six blisters have been applied unless the lameness disappears before.

Diarrhoea

Bull 18 months old has scours. He refuses after ten days to eat. Previous to the attack he had oat hay, the run of pasture and plenty of good spring water. Now he appears to have lost his cud and has run down. The only feed he will take with relish is carrots but I am careful to only feed a few each day. What would you advise doing for him? — Subscriber, Cloverdale.

The bull may have eaten some frozen grass or a weed that did not

agree with him. To soothe the stomach and create a desire for food that will make a cud give him the following: One-half ounce aloin, one ounce powdered nux vomica, six ounces turpentine and two quarts raw linseed oil. Mix and shake well. Divide into eight doses and give one dose morning and evening. Feed some carrots if he continues to like them and give a small amount of alfalfa hay or corn fodder. Try to get hay or fodder that was not too ripe when cut but is a little tough. That will form a better cud. Keep all grain or ground feed away from him until he commences to chew his cud again. After giving the above medicine if the diarrhoea still continues get these powders: Two drams tannic acid, four ounces ground gentian, one ounce powdered digitalis and three ounces bicarbonate of soda. Mix all and make into 20 powders. Give one powder morning and evening by putting one in a bottle, adding a cup of water and giving it as a drench. After giving a few powders the rest may be given one at a time in a little ground feed twice a day as before.

Cow With Six Teats

We have a promising Holstein heifer about to freshen which has six average size teats. Would it be advisable to milk all six?—Subscriber, Arizona.

There being six teats shows that there are six separate lacteal glands. If two of these were very small, by not milking them they might dry up and cause no trouble, but as you say in this case they are all of average size, it would be dangerous to dry up two of them, as the irritation might cause trouble. However, you might try it, and if that part of the udder shrinks up and does not become hard nor inflamed, well and good, but if it shows any tendency to become sore you had better milk out all six.

Cow Pox

Am having some trouble with my cow. She has sores on both sides of the udder running down about half way to the teats and extending all the way up to the thigh and down on the thigh five or six inches. The skin is cracked badly and discharges a sort of bloody fluid and of course it is painful for her to be milked. Otherwise she seems to be in good health, eats well and seems to feel well. Am giving her salts and rubbing the affected parts with carbolated vaseline. What would you advise doing for it?—Subscriber, Oakdale.

Probably it is cow pox in a very bad form. The carbolized vaseline is not good for that kind of a sore. It holds the fluid that exudes from the skin and causes the trouble to spread. Wash it all off with soap and warm water, then wet the parts twice a day with a solution of permanganate of potash, using a dram of the permanganate to the pint of water. If this dries the skin so it cracks, then grease it with a little butter and apply the permanganate solution again. Continue the salts internally.

Melanotic Tumors

I have a very good gray mare about 14 years old that has warts, or whatever it is called, under her tail. Five years ago they were about the size of a walnut, but since then they have grown and become one mass. It does not interfere with her usefulness and I have been told that nothing can be done for it. What is your opinion?—Subscriber, S. M. H. E.

Somewhere in the animal economy a black pigment or coloring matter is formed that gives the color to the hair. As the animal grows older and the hair from year to year becomes nearer white, the call for the coloring matter becomes less. The secretion continues as before and instead of being eliminated from the system in some other way, forms into what are called melanotic tumors. They do no special harm and nothing can be done for them worth while. If one gathers where it becomes unsightly or is irritated by the harness, it may be cut out and healed up, but it will gather then in some other place which may be less objectionable.

BUOYANT CONCRETE

The concrete ship Faith, built in this country, successfully completed its maiden trip across the Atlantic and aroused much interest in England. It is 336 feet long, 46 feet wide, its greatest depth 25 feet and its average draft 22 feet. It has four bulkheads of reinforced concrete like the shell of the ship. The Faith is very steady in rough weather, encountering an 80-mile gale and "listing but 12 degrees." While in the Surrey docks the vessel was visited by members of the British Concrete Institute who were very enthusiastic over the future of concrete ships.

The Yuma County, Arizona, cotton growers will raise their own seed on a selected ranch of 170 acres.

UNITED STATES RE-EXPORTS

The total exports of foreign merchandise from the United States during 1919 will have a total value of about $180,000,000, perhaps much more. This is four times the value of the re-exports of 1914 and exceeds for the past eight months the total of 1918 by $20,000,000. An unusual item in the list is art works, other than the production of American artists, to the value of $20,336,444. This covers a $20,000,000 shipment to France of art works brought into the country in 1912 for exhibition at the Panama Exposition and other places and afterward placed in museums of this country and Canada for safe keeping during the war.

WHAT IS MANJAK?

We didn't know we had it or whether it was a disease or an animal, but a government report states it is found in the wilds of Utah. Manjak is much like asphalt in chemical composition and is almost pure bitumen. It looks like coal, is odorless, hard and brittle and is found in long seams between layers of clay. The most important use of manjak is as a money saver in connection with rotary drilling for oil. A soft compound is used on the joints of the pipes between the casing threads and drill stem threads, preventing either water, sand or grit getting into the threads and so prevents wear. For this purpose it has no superior.

ORDERING FEED THROUGH FARM BUREAU

The Glenn County farm bureau is maintaining a market department which is doing some most effective work for its members, one feature being the placing of an order for feeds in carloads, secured at rock bottom prices. Members have a rate of $73 per ton on ground green bone, $116 on meat scrap, $41 on rice bran, $57 on rich polish and $55 on coconut meal.

AMERICAN GOODS NEEDED

A United States trade commission in Colombia, South America, states that notwithstanding the large orders for general merchandise placed in the United States by the leading wholesale importing houses of Cali, Colombia, there is a brisk demand at present for waterproof garments for street and riding wear; ready made clothing of Palm Beach cloth and other light weight materials and a half dozen other lines of which the state is at present very short.

BEAN Sprayers

are leaders in many money saving ways. Dependable, reliable, efficient, furnishing high pressure at small cost.

Valves will not rust out and they can be cleaned in less than two minutes by one not experienced while the engine is running. This is a Bean feature worth investigating.

Write for our sprayer catalog. It explains 10 points of Bean Supremacy.

Ruminations of an Amateur Gardener

By A. F. Clarke

SHOW me the really enthusiastic amateur gardener who doesn't like to experiment with new things. Who doesn't like to get seeds of some alluringly named new vegetable or fruit or berry and plant it out with great and exacting care and nurse it along till the time comes when one can determine if it's to be fish, flesh or fowl or merely a common weed with high sounding cognomen? Of course we do, and failures never daunt nor prevent a repetition of the experimentation.

Well, I tried some new ones the past season, and I haven't any rose hued reports to make on them—but like enough I'll be dabbling in the new things so alluringly pictured in the catalogues the coming season.

Did you ever raise vegetable almonds or vegetable oranges or sunberries or climbing cucumbers?

An Eastern seed catalogue set these all forth so enticingly that I bit on 'em all. Results:

Vegetable almonds is another name for chufa, and chufa is the book name for the grass nuts that are found occasionally down south. I think I got a full hundred from one seed nut. The nuts attach to the roots of a bright green bunch grass and are about the size of peanuts and have the flavor of coconuts. But they have to be peeled and it takes too many of what's left to make a mouthful. Still, they're a rather interesting novelty and very prolific. But I shall not try them again.

The vegetable oranges were planted with great care, but a single vine came up and this had a single "fruit," this quite resembling a St. Michael orange. The flavor was quite a piquant sub-acid. They don't compare with the Tiptop melon, but one sample at least gratified my curiosity.

Sunberries I found to be nothing more or less than deadly nightshade; at least nobody but a botanist could tell the difference. Berries few and of a disagreeable flavor. And to think that Burbank fathers them!

The trellis supplies the only distinction between climbing cucumbers and the common garden varieties.

I must admit, too, that the roselle has been a bit of a disappointment. I got mine in early but got only one picking before the frost came, and believe the same space to any of the standard berries would have paid better.

Garden Notes

One wants to know what he's getting when he buys stable manure. The load I bought in the spring introduced a greater variety of weeds into my back yard than are found in the unabridged botany. I'll stick to nitrate of soda next time.

Celery land is extending. Saw something like 50 acres in a solid planting between Tustin and Irvine the other day, on the great Irvine ranch, and just below Irvine towards Laguna Beach noticed 20 or 30 acres of lettuce in one piece.

Now that the leaves are pretty well off the back yard fruit trees it's a fine time to start a compost heap. The pile will accumulate in the run of the winter a lot of fertilizer that will add needed humus to your garden. Put all dead vines and other rubbish on the pile.

Now's a good time to fertilize rhubarb. It's a heavy feeder and well repays heavy fertilizing. If barnyard or chicken manure isn't available any good standard commercial fertilizer will do.

Asparagus tops should be cut and burned or piled on the compost heap now.

Now's the time to plant out onion sets, lettuce, radishes, turnips and other hardy vegetables unless your locality is too cold.

'Ware the weevil! Place your beans in an airtight container and place on top of them in an open vessel carbon bisulphide at the rate of one ounce to 100 pounds. Keep sealed for 24 hours and the last invader will be dead.

Sweet potatoes will keep better if sweated before storing.

If the garden soil is well broken up and turned over now it will catch and hold the winter rains better and insect pests will be reduced in number.

Blackberries can be propagated now by root cuttings. Select roots about the size of a lead pencil and cut them into pieces two inches long. These should be packed in boxes of sand and kept well drained during the winter. They must be planted at least two inches deep in the spring.

I had rather good luck this season in planting rhubarb seed, but planting roots of the rhubarb is the quicker method, and these may be planted any time now. New Crimson Winter or Wagner's Giant Seedling are the popular varieties for this region. Plant in rows five feet apart and three feet between plants.

Champion

Dependable Priming Plugs

Fires Cold Engine

Champion Dependable Priming Plugs are better than priming cups. The gas trickles down the core of the plug and directly over the points where and when the spark jumps. The explosion is instantaneous and sure.

For the hundreds of thousands of automobiles which have no priming cups Champion Dependable Priming Plugs are imperative.

For sale by all auto parts dealers.

Price $1.50 Each

HOUSTON'S REPORT

IN Secretary Houston's annual report of the department of agriculture great credit is given to the farmers of America for saving Europe. This was done twice; that is, in the estimation of the secretary not only was the great production of the farmers of America necessary to save Europe during the war, but after the armistice was signed there was a period in which Europe would have suffered untold loss of life if large contributions had not been made by American producers. The secretary says:

"The cessation of hostilities brought no immediate improvement in Europe. On the contrary, in some respects more adverse conditions developed. Revolution became the order of the day; the directing hand of government was removed; discipline was relaxed; the morale, particularly of the people of the Central Powers, was broken; idleness and unemployment prevailed; and in some sections anarchy reigned. It was obvious that Europe could not produce sufficient foods for herself. Her crops had been short for several years, and it was scarcely probable that those for 1919 would be greater than the crops of the last year of the war. Quite as unsatisfactory was the livestock situation. In nine of the Western nations the number of cattle had declined more than 7,000,000, sheep 7,500,000, swine 24,500,000, and dairy cows several millions, with a greater proportionate reduction in the volume of products.

The secretary deals with the upward tendency in agriculture, forestry policies, increased productivity, placing a limit on absentee landlordism, more accurate and complete statistics, and especially further aid for marketing. Touching upon the extension of good roads in America, the secretary urges that such work be facilitated in every possible way and beginning in 1922 $100,000,000 each year shall be devoted to federal road building for four years.

In the matter of bettering rural conditions he recommends:

"The building up, primarily under state law, of a system of personal credit unions, especially for the benefit of farmers whose financial status and scale of operations make it difficult for them to secure accommodations through the ordinary channels.

"Expansion of existing facilities and activities for aiding farmers in marketing, including especially the extension of the market news and food products inspection services, and the assignment of trained market specialists to each state, in cooperation with the state authorities, to stimulate cooperative enterprises and to make helpful suggestions as to plans and methods.

"Continuation of the present policy of federal participation in road building, through the appropriation, if the financial condition of the nation permits, $100,000,000 for at least each of the four years beginning with the fiscal year 1922, to be expended under the terms of existing legislation

"The regulation and control of stockyards and packing houses.

"Federal legislation further to protect consumers against misbranded, adulterated and worthless feeds entering into interstate commerce.

"Similar legislation dealing with fertilizers.

"Increased support by states for rural schools and more definite direction of their instruction along lines related to rural problems and conditions.

"The requisite legislation for the improvement of the sanitary conditions in rural districts and for the building up of the needed hospital and medical facilities."

IMPORTANT TO KNOW

The enumeration of the population of the United States in the federal census is some job, but it is perhaps amongst the least of the troubles of the census takers. It is probable that more time will be lost because of lack of definite knowledge on the part of the greater number of us as to our transactions during the past years. Especially will this be true as to farm production. Here are a few of the things which are to be asked when the enumerator comes around:

Each occupant of a farm will be asked how many years, if any, he worked on a farm for wages; how many years, if any, he was a tenant; and how many years, if any, he farmed as an owner.

Whether he (a) owns, or (h) rents, or (c) partly owns and partly rents his farm, or whether (d) he operates the farm for others as a manager or superintendent.

How many acres in his farm? Number of improved acres? Number of unimproved acres and number of acres of woodland?

Total value of farm? Total value of buildings? Value of implements and machinery on farm?

Whether farm is mortgaged? If so, the amount of mortgage?

Expenses for feed, fertilizer, and labor in the year 1919?

Several questions concerning artificial drainage of his farm.

Number of cows, horses, sheep, chickens, and other domestic animals on the farm January 1, 1920?

Quantity and acreage of all crops grown on the farm in 1919, including fruits and vegetables?

Quantity of milk and hutter sold off the farm during the year 1919?

Acreage of timber land on farm and value of forest products.

Correct answers to the above questions are of the utmost importance. The United States department of agriculture assisted the census bureau in preparing the questions on the agriculture schedule and appeals to farmers everywhere to keep farm records for census purposes.

SQUIRREL CAMPAIGN

Commissioner Ryan of Los Angeles County is compiling field reports on the ground squirrel question to determine in what districts to start a drive with carbon bisulphide. Probably seven or eight men will be detailed for this work, for present conditions are excellent. No hillsides or rocky soils will be worked for the reason that a low per cent of deaths only can be secured in loose soil or hillsides where the burrows may lead from the entrance upward. Even with the explosion methods now used, squirrels in such lands usually escape. They will be taken care of in the spring through the use of poisoned grain.

CROP REPORT REVISION

The Los Angeles County horticultural commissioner is revising crop reports for his county for the past three years, getting special information from field deputies and others known by him to be reliable. The final work comes under Mr. Ryan personally, and he feels that when the figures are all in he will be able to give us a report that may be relied upon as the most accurate yet issued.

What has the Design to do with "Pull"?

At first thought, it may seem a simple matter to design a track like that of the "Caterpillar" Tractor, in such a way as to eliminate all the power-waste possible and reduce upkeep to the minimum. Actually, it has taken a quarter century to perfect the "Caterpillar" Track.

And so, throughout the "Caterpillar" Tractor, correct design is largely responsible for its almost unbelievable power and durability.

The secret of "Caterpillar" Tractor "pull" is, that correct design enables the power of the motor to reach the drawbar with minimum loss and friction. That's why the "Caterpillar" Tractor has always out-pulled other tractors of equal rated horse-power, and why "Caterpillar" maintenance expense is lowest.

Superior construction is not always evident to the eye. Results reveal more than appearance, and no other machine can duplicate Holt results.

Folder No. 413 explains other "Caterpillar" Tractor points of superiority. If you are interested in tractors you should send for it.

When Writing Advertisers, Mention the Cultivator.

Buying Breeding Stock by Mail

GENERALLY speaking it is more satisfactory to purchase breeding stock by making a personal visit to the herd or flock or attending a sale in person. However, there are times when it becomes necessary to make purchases by correspondence. As a matter of fact much of the average breeder's business comes by way of the "mail order" route, and the fact that one hears so few complaints is both a tribute to the integrity of the average breeder and a testimonial from buyers that the plan is satisfactory.

Notwithstanding the general success of the plan, there is still room for improvement and it is certain that if prospective buyers would put into practice a few of the following suggestions they would be better satisfied.

First of all, the buyer, if he is a new man in the business, should familiarize himself with the breed he has decided to handle. He should have a fair knowledge of the more highly esteemed blood lines, the most accepted type, and the general values being established for the breed.

For the most part, it will be found that any breeder who is advertising in a high class farm or livestock journal can be regarded as reliable for the reason that papers of character make it their business to ascertain the reliability of their advertisers before the business is accepted. The above statement does not mean, however, that all advertisers have equally meritorious stock. When one decides as to about what quality he intends to buy, he should communicate with a number of advertisers in order to locate those handling the quality he is in the market for.

In outlining one's wants frankness and reasonableness should be used. The writer has seen many letters written to breeders setting forth a description of the kind of stuff wanted and many times only a perfect animal could fill the bill—and perfection is not only rare but always of high value. If one doesn't know what he wants, he had better admit his lack of knowledge frankly and tell the breeder to send the best he can for the amount to be spent.

It is always advisable to obtain a photograph of the animal in question together with information as to its **weight, age** and general measurements, and a copy of the pedigree.

Such details as whether or not, if pigs, they have been immunized, if cattle, tested for tuberculosis, or if contagious abortion has been in the herd, in short the health of the animal, should be made sure of. The purchaser should also inquire as to how the animal has been fed—the kinds of feeds and the amount. If buying a bred animal, the service date should be known beforehand and in all cases the purchaser should have a clear understanding as to what the seller guarantees.

Upon receipt of the purchase, do not be too hasty to pass judgment. Remember that an animal always looks its worst after shipping. If disappointed, it may be that you expected too much for your money and that you really got value received. If satisfied with your purchase, tell the seller so. He is human and likes to know that his efforts to please his customers are appreciated.—R. P. R.

The Short Sale of Shorthorns

R.C. SHORT of Reno, Nevada, one of the pioneer Shorthorn breeders of the West, sold 43 young bulls and females at the state fair grounds at Sacramento on December 11 for $7,555, averaging $175.50, a price that was entirely satisfactory to the owner as his cattle were right off of grass, not having been fitted for the sale ring. The few pasture bred heifers sold to advantage, but most of the lot were hardly of breeding age. The few young bulls sold for $190 each.

Frank McEnerney of Galt and S. C. Dorn of Oroville were the heaviest buyers, taking 12 and ten head respectively. Paul R. Sims of Elk Grove took home five likely looking heifers.

The offering, which was Short's first attempt at a public sale, was presented in range condition which made them sell better to the buyer's advantage than to the seller's. Had the stuff been up in the feed lot for a few months before sale date, Short would have realized from $50 to $100 a head more. His cattle were of good frame and substance, well covered, even though thin, and a pleasing lot of good utility stock. Another offering from the same herd in another year with the animals fitted for the sale would prove more encouraging to the breeder.

Ord L. Leachman, the Sacramento livestock auctioneer who handled the sale, was supported by ring talks from B. O. Cowan of Berkeley, for many years assistant secretary of the American Shorthorn Breeders Association; Prof. Gordon H. True of the animal husbandry division of the University of California; Senator Ben F. Rush, veteran Shorthorn breeder of Suisun; and W. M. Carruthers, Shorthorn breeder of Live Oak. Frank Brown of Carlton, Oregon, president of the Pacific International Livestock Show, was among the prominent breeders present.

The summary of the sale follows:

Purchased by Frank McEnerney, Galt: Miranda, 793854, calved May 25, 1918, $190; Dollie, 745089, calved February 10, 1918, $160; Nellie Blye, 745092, calved March, 1918, $200; Sweetheart II, calved December 3, 1918, $270; Zelda, calved November 12, 1918, $150; Birdie, 687641, calved April 23, 1917, $145; Janet 2nd, calved December 28, 1918, $160; Nathalie, 745091, calved March 14, 1918, $190; Foundation, 793850, calved May 26, 1918, $190; Linda Belle, 793851, calved June 2, 1918, $160; Pleasant Girl, 684072, calved June 13, 1917, $150; Cherry Blossom II, calved November 17, 1918, $155.

Purchased by S. C. Dorn, Oroville: Peace, 684071, calved June 19, 1917, $125; Collynie General 3rd, 745074 (bull), calved March 20, 1918, $220; Springdale Abbott, 75855 (bull), calved February 14, 1918, $210; Maud Adams II, calved November 10, 1918, $140; Virginia 2nd, 793856, calved May 30, 1918, $155; Fawn, 684065, calved June 21, 1917, $110; Prince, 793847 (bull), calved May 23, 1918, $170; Primrose, 793855, calved May 22, 1918, $135; Alexandria 2nd, 793848, calved May 24, 1918, $110; Meadow Queen 7th, calved November 25, 1918, $135.

Purchased by P. R. Sims, Elk Grove: Amelia, 757851, calved March 27, 1918, $225; Genevieve, 687642, calved April 27, 1917, $205; Mabel, 793853, calved May 23, 1918, $200; Alpine, 684061, calved June 15, 1917, $255; Violetti, calved November 15, 1918, $200.

Purchased by H. L. and E. H. Murpby, Perkins: Mayflower Jewell, 587033, calved June 15, 1916, $260; Annabel, calved December 20, 1918, $150; Duchess, 793849, calved May 24, 1918, $135.

Purchased by George A. Murphy, Perkins: Edith, 745090, calved February 5, 1918, $250; Annie Lea 5th, 684062, calved January 18, 1917, $260; Laura II, calved November 13, 1918, $170.

Purchased by A. Eddlemon, Acampo: Georgia, 684066, calved June 19, 1917, $160; Lottie 5th, calved January 25, 1918, $125; Collynie General 4th, 793843 (bull), calved June 1, 1918, $275.

Purchased by Thomas Harrison, Santa Rosa: Lady Emily, calved November 19, 1918, $185; Lily Beaumont 5th, 684068, calved June 28, 1917, $125.

Purchased by Davis Horse and Cattle Co., Davis: Grizzley, 793844 (bull), calved May 21, 1918, $135; Major John, 745080 (bull), calved February 12, 1918, $160.

Purchased by R. Lauppe, Antelope: Hopeful, 685057 (bull), calved June 25, 1917, $160.

Purchased by G. A. Maxwell, Dixon: Wildflower, calved December 27, 1918, $110.

Purchased by W. C. Hamel, Davis: Sagebrush Boy, 745084 (bull), calved February 9, 1918, $190.

A Letter From a Poland China Breeder

Hugh C. Shinn of Tulare writes to the livestock editor:

"Your articles in the Cultivator of November 29, pages 728 and 729, meet my approval so completely that I thought I would have to tell you about it. There are a great many breeders as well as farmers who might study them closely to their advantage.

"If you have visited many new herds you know that it is a very common thing for a man to buy a sow or gilt bred to farrow on a certain date and then have her farrow a month sooner or later. He feels rather dubious about it and wonders whether anyone knows what is the sire of the litter. The breeder who sold him the sow, after he finds out when she farrowed, figures back 112 days and signs a statement that this sow was bred to one of his herd boars on that date. Doesn't sound just right to me. This is only one of a great many ways in which a great many sows and gilts sold in the last year have proven unsatisfactory.

"There are some Poland China breeders who are always known to keep accurate and reliable records and others who are not—which you doubtless know—and the man who is particular about the records he keeps is just the one who is mighty particular about the class of sows he keeps in his herd. There are many breeders now who will only buy from breeders whom they know keep careful records and stand behind their representations.

"Your article 'Build Your Herd on a Sound Basis' might have been made somewhat stronger by saying that only really high class animals have any real value for breeding purposes and that a lot sold for such have no value whatever.

"You wonder how so many pure bred hog sales are going to go this spring? Well, real good stuff will command a good price and a lot of ordinary stuff will bring some very ordinary prices and a lot of breeders will learn what kind are worth raising and farmers will learn what kind it pays to buy. Maybe there won't be so many sales next fall, but I will gamble that the quality of stuff offered at public sale will be a lot higher.

"Now if you have had the patience to read this far, I want to tell you that the Poland China business in Tulare County is in a thrifty condition and on a sound basis."

Use Molasses in Pork Curing

In the present sugar shortage it is advisable, even if sugar can be procured, to use molasses or some kind of syrup in place of it in the formulas used for curing pork, according to the United States department of agriculture specialists.

If sugar is used for dry curing it is better anyway to make it into a syrup before using, for salt mixed with sugar will not stick on meat as well as salt mixed with syrup. The use of molasses or commercial syrup does away with this extra work.

The following formulas have been found to give good results:

Sweet Pickle or Brine Cure

Select pieces 12 pounds or less. Make a pickle consisting of three and one-half pounds salt, one and three-quarter pounds syrup or molasses, or, if preferred, one and one-quarter pounds sugar, preferably brown, one ounce saltpeter, two and one-quarter gallons water. These amounts for 50 pounds of meat. If more or less meat is used, the amounts of the ingredients should be correspondingly increased or decreased. Under no circumstances should the individual piece of meat weigh over 12 pounds.

Place the meat in a stone jar or hardwood barrel and weight it down with a board and stone. Do not use iron for it will rust. Then pour in just pickle enough to cover the meat. Leave the meat in the pickle three days to the pound of meat. A 40 pound ham would be left in the pickle for 30 days, and a six pound bacon, 18 days. After the meat has been in cure a week, take it all out of the jar or barrel, remove the pickle, replace the meat, weight it down, and again pour the same pickle over the meat. Repeat every week.

Dry Cure

Applicable to either light or heavy meat. Mix thoroughly three and one-half pounds salt, one ounce saltpeter, one ounce red pepper, one ounce black pepper. Then add one and one-half pounds warm syrup or molasses and mix with the above until it assumes the appearance of sawdust.

Apply a liberal coating of the mixture to all surfaces of the meat, excepting the skin. The meat should then be placed on a table, clean floor, or in a hardwood barrel, after first sprinkling the surface of the table, floor, or bottom of the barrel with salt. Leave all the meat in cure undisturbed until the heaviest piece has been in for a period of one and one-half days to the pound. Thus if the heaviest ham weighs 20 pounds, leave all the meat in cure 30 days.

Meats cured in sweet pickle or brine should be consumed within 90 days from date of cure. Meats cured with dry cure may be consumed immediately upon removal from cure, but the flavor improves with age, and the meat is better 60 days after curing. Dry cured hams have been known to keep three or four years.

EAT LAMB

The Maurer Cattle Company of Los Angeles is aiding in the effort to whet Uncle Sam's appetite for lamb. Along this line is the recent brochure of 20 pages which touches upon present consumption and the hindrances to a bigger lamb and mutton market and other points of the industry. The book shows lamb and mutton to be amongst the most healthful and most easily digestible and most tasty meats. It gives various cuts with instructions how to discriminate in marketing, how to guard against buck and old ewe meat, and ends by giving methods of cooking. This is an attractive booklet, and some of the recipes will be given in the household department in an early issue.

BOYS CLUBS

We have received from Chas. L. Hampton, director of vocational agriculture of the Santa Rosa schools, the following statement made by Walter Olsen, a member of the club connected with that school, as to method of feeding and growing a prize winner:

"I entered the sow and litter project because I live on a farm and am interested in pigs and bought my sow through the district club leader, Mr. Hampton. I selected this breed, first because I had an opportunity to secure world champion stock and it is a fast developing breed.

"A pasture or greens cut and thrown to the pigs so they can pick out what they want is essential because it saves on high priced grain and is good for brood sows and little pigs. I fed my sow waste from the kitchen, such as sour milk, fruit peelings, etc.

"The sow drank very little water unless it was a hot day, then she drank quite a bit. The little pigs had fresh, whole milk with a little barley meal. They drank a little water when they were six weeks old.

"I fed the sow about two parts mill run, three parts alfalfa meal, three parts barley and one part coconut meal. I did not give the sow anything to eat for about 36 hours after she farrowed, then I gradually fed her until she came up to normal rations in a week or ten days.

"I made a little pen at one end of the sow's pen with enough space between the floor and the bottom of the partitions so the little pigs could run under. In this pen I fed them warm milk and barley meal five times a day; 8:00 o'clock, 10:00, 12:00, 2.00 and 5:00.

ANIMAL FOOD CO., Oakland, Supply

CALF AN-FO BRAND MEAL

"In winter I fed the sow at 8:00 o'clock in the morning and about 5:30 in the evenings. In summer I fed her about 7:15 a. m. and 6:15 p. m. A day or two before I weaned the pigs I cut down on the sow's feed so she would not make milk.

"I fed the little pigs two parts mill-run, three parts alfalfa meal, four parts rolled barley, two parts barley meal and one part coconut meal. I spent most of my time with the sow, cleaning the pens, washing the sow with a solution of sheepdip and water. The district club leader, Mr. Hampton, visited me and advised me about my sow and litter.

"A pure bred sow has many advantages over a scrub, because a larger, well developed type of a hog can be produced in about eight to ten months. Next year I intend to enter the corn contest, sow and litter, and I am going to plant about one acre of barley to pasture my spring litter. I have learned many things about feeding pigs, how to attend a sow at farrowing and proper light and ventilation of the house."

LIVESTOCK SHOULD NOT HAVE ACCESS TO POISONED AREAS

Joseph Avilla of Cordelia asks the Solano County board of supervisors to reimburse him for loss of cattle alleged to have died through grazing in an area poisoned with a proprietary preparation used as a thistle eradicator by the county on its highways. The request was refused and the matter will be adjusted in the local courts. Repeated warnings have been issued by the California state department of agriculture with relation to safeguarding livestock in areas poisoned for weeds, rodents or grasshoppers, and in such case the damage surely is due in part to contributory negligence on the part of livestock owners. Today (November 9), en route from Sacramento to Chico, the writer saw on the highways and railroad right of way cattle, pigs and chickens! Where is the blame?

CALIFORNIA CAMPAIGN FOR 10,000 JERSEYS ON TEST

California rose from the 54 per cent states in July to the 76 per cent states in October in the "10 000 Jerseys on Test" campaign recently inaugurated. California will reach her quota of 200 cows some time in the spring, according to University of California authorities.

The highest seven day records received at the office of official tests were for Eldorado Winifred, a cow belonging to Alex Whaley of Tulare. Eldorado Winifred at the age of four years and five months produced 24,174 pounds of butter fat and 637.6 pounds of milk, average per cent 3.79, in seven days during October.

During October 38 Holstein herds in California were on official or semi-official test. Of these, 28 put cows on test for seven days or longer and 12 for 30 days or longer. One hundred and eighty-eight Holstein cows were tested for two days as part of their yearly records. The records follow: June Register of Merit test, 91 cows; July Register of Merit test, 107 cows; August Register of Merit test, 115 cows; September Register of Merit test, 134 cows; October Register of Merit test, 153 cows.

ELBERG BUYING CHOICE SHORTHORNS

Dr. H. M. Elberg of Woodland, accompanied by his manager, Carl Johnson, is now in the East for the purpose of buying a few high class Shorthorn females. Messrs. Elberg and Johnson attended the Anoka Sale and the International Sale. At the latter sale they secured Village Belle 20th, a red junior yearling heifer by Archer's Stamp, a son of Sultan Stamp, and out of Village Belle 13th. The price paid was $1,500. While East they expect to visit a number of the leading Shorthorn establishments and will probably purchase several more females.

WORKS BOTH WAYS

"He says he proposes to make automobiles that will easily attain a speed of over one hundred miles an hour."

"Whew! that's a great business undertaking."

"Yes; but most of all it means a great undertaking business."—Philadelphia Press.

Breeders Who Know

and are a judge of the right type of Poland Chinas have placed th ir stamp of approval on my herd. I appreciate the strength of their judgment as it fully justifies the time, labor and money spent in building up my herd.

Representative Blood Lines

found in my herd are King's Massive Orange, Giant Buster, Surprise Prospect, The Yankee, Liberty Bond, The Californian, Young Jumbo and King's Big Bone Leader.

Such blood lines combined with size, type, quality, that are absolutely necessary in maintaining a high class breeding herd of Poland Chinas, will be found in my

Bred Sow Sale, Hanford, Jan. 24, 1920

Plan for this sale now—send me your name for catalog. I assure you, you will not be disappointed in the offering.

H. D. McCUNE LEMOORE, CAL.

Breeder of Big Type, Quality Poland Chinas

The Giant Bob Sale

My entire herd of Big Type Poland Chinas, including GIANT BOB, the grand champion boar of 1919, will be sold at Public Sale

Monday, January 26th, 1920, Fresno, Cal.

Practically the entire offering bred to or sired by Giant Bob. There will be a few bred to Prospector and Gatewood's Prospect. These are two of the best young boars I could find in the corn belt.

Every Poland China I own will sell in this sale. Plan now to attend.

Chas. Gatewood Fresno, Cal.

TAKE NOTICE! THE HIGHEST PRICE paid for a car load of fat hogs at the California International Livestock Show came from the

BASSETT

Herd of Advance Type Poland Chinas

Many firsts, seconds, senior champion sow and GRAND CHAMPION SOW were won in the open classes, proving without a single douht we are breeding the kind the packer wants and the farmer should raise. Animals of all ages, high class young boars, bred sows and gilts for sale at reasonable prices.

M. Bassett & Son Hanford, Cal.

Participate in the Opportunity

of securing what is eagerly sought by practically ever breeder of Poland Chinas, desiring size, type, blood lines. Real type sows bred to such boars as Lendorris Liberty Bond, Young Jumbo and Liberator, offers you the opportunity of genuine herd improvement. Inquiries cheerfully answered.

Lendorris Ranch

W. L. Haag & Son Hanford, Cal.

Bred Sow Sale, March 13th, 1920

Come to Paradise

and see my big type Poland Chinas; grandsons and daughters of Caldwell's Big Bob. One of his best sons heads my herd. Also the home of Whiz-Bang. Get my prices and breeding and satisfy yourself that I offer the kind you want.

J. H. Cook Paradise, Cal.

The Verdict of the Breeders

is that THE YANKEE JR. is one of the real Poland China boars on the Pacific Coast. He is sustaining this verdict by the class of pigs he is siring. They are called breed improvers and one of his sons will materially assist you in your breeding operations.

John M. Bernstein Hanford, Cal.

Bred Sow Sale, March 13, 1920

DON'T BE TOO LATE

Just a few of the prize winning Poland Chinas, that have been the sensations at this year's shows, remain unsold. I am not pricing them unreasonable and much less than you would pay in the east for animals not so good. Write me today what you want and I will send you full particuars.

J. F. LEHMAN LODI, CAL.

Shropshire Sheep

McCarty and Starkweather, breeders of big type Poland Chinas, Modesto, report the sale of a boar to H. L. Graham, San Fernando. This boar was sired by Kansas King and out of Miss Nebraska 2nd, the dam of the four senior pigs shown by them at the California International Livestock Show and which were placed one, two, three and four in their class. Another boar by King Jones Over and out of Movie Actress was sold to F. M. Woods, Jr., Menlo Park.

Valley View Farms, property of W. T. Hollingshead and Sons, Orland, just finished breeding 50 fall and spring Duroc-Jersey gilts, a number of which will go into the sale to be held in Orland some time in February. They will also consign to the sale to be held in Davis January 14 by the California Duroc-Jersey Breeders Association a junior yearling sow bred to Uneeda Sensational Defender, junior champion boar at the late Glenn County fair.

The Poland China breeders of California through their state organization will hold a consignment sale of high class bred sows and gilts at University Farm, Davis, during stockmen's week which has been announced for the last week in February. The committee having this in charge is composed of Hale I. Marsh, Modesto; Sherwood Beckman, Lodi, and Fred Gatewood, Fresno.

In a recent communication from Clayton Slocum, well known to the breeders of Duroc-Jersey swine, he states that he expects to leave for the East just after the first of the year and will visit the leading herds of the East and the Central West. He also states that he has been commissioned to purchase a number of bred sows and gilts for a number of farmers and breeders and that he will be pleased to select for any breeder or farmer such animals as he may desire to purchase in the East.

Chas. Gatewood of Fresno has announced his sale date as January 26. At this time Mr. Gatewood will hold a complete dispersal sale of his herd of Poland Chinas, which will include the 1919 grand champion boar Giant Bob. As has been previously stated, Mr. Gatewood is forced by failing health to retire from the breeding business. No doubt his sale will attract buyers from all over the Pacific Coast.

Chas. M. Talmadge, formerly of Newport, Washington, and a breeder of Berkshires and Jersey cattle, paid the Berkshire breeders of California a brief visit the past week. Mr. Talmadge was returning from the International Livestock Show, Chicago, where he judged the Berkshires in both the breeding and fat classes. Mr. Talmadge will locate near Salem, Oregon, where he will continue his breeding operations and be in a position to keep in close touch with Berkshire matters as he is one of the directors of the American Berkshire Association.

W. M. Carruthers, breeder of Shorthorn cattle and Berkshire swine, expects to move all his livestock to his new farm just north of Live Oak. He states that he has sold all the Berkshires he can spare and when settled on his new farm expects to materially increase his herd of Berkshires. One addition will be a new boar by Rival's Champion Best which he is securing from the herd of Dean Curtiss, Ames, Iowa.

H. E. Spires of the publicity committee for the Fresno district Duroc-Jersey swine breeders states that they will hold a public sale on the Fresno fair grounds February 4, 1920. The sale will consist of bred sows and gilts, and as this is their first sale particular attention will be paid to the individual merit of the animals offered as well as the most popular blood lines.

H. E. Cornwell, Modesto, has an excellent herd of registered Holsteins milking again, although it will be remembered that the milking herd was sold off two years ago. The daughters of Prince Hiske Walker are the pride of the herd, and in Mr. Cornwell's opinion are the best lot of heifers he has yet bred and developed. Ciruela Walker, junior champion at Sacramento and grand champion at Fresno and Stockton this year, is milking around 56 pounds per day four months from freshening with first calf. This heifer traveled over 500 miles by motor truck making the fairs, freshened on the circuit and made an official record of 18 pounds butter in seven days while on the trip. Anoakia Diotime Korndyke, now milking with her second calf, is making right around two pounds fat per day. Recent seven day records made in the herd are 19.87 pounds butter from 408.9 pounds milk by Melba Zenobia Pontiac, and 19.39 pounds butter from 445.7 pounds milk by Jetze Aaggie De Kol. Several members of the herd have made creditable records in the eight months after calving division, including Abby De Kol Prilly, daughter of the 30 pound cow Abby De Kol of East Bank 2nd, who made 10.54 pounds as a junior three year old. Another fine crop of heifer calves is coming on in Mr. Cornwell's herd. They are a uniform lot, showing plenty of constitution, straight lines, and promising udder development. They are by the present herd sire Sir Johanna De Kol Rag Apple who is by a son of Rag Apple Korndyke and out of Adirondac Wietske Dairy Maid, the highest record cow in California, 41.02 pounds butter in seven days. It will be remembered that another of her sons sold at Sacramento for $5,000 last March.

Several substantial official records have been made recently in the good herd of registered Holsteins owned by A. M. Bibens, Modesto. Sinaloa Josephus made 23 pounds butter in seven days and 94 pounds butter in 30 days, and Mechthilde Josephine Skylark, a daughter of Sir Skylark Ormsby Hengerveld, made 20.6 pounds butter in seven days and 80.9 pounds in 30 days. An especially pleasing record was made early in the fall by Miss Luit Aralia Burke, a daughter of Aralia King and the 32 pound four year old Luit Burke. She made 26.62 pounds butter in seven days and milked up to 78 pounds per day. No especial effort is made by Mr. Bibens to secure large seven day records, as his plan of feeding and handling is directed toward consistent production for at least ten months and a calf within the year. Mr. Bibens has made arrangements with California Breeders Sales and Pedigree Company, Sacramento, to sell his milk herd numbering 60 cows at public auction on his farm on Wednesday, April 21, 1920.

Two of the most enthusiastic California breeders at the International were John A. Bunting, secretary of the Pacific Coast Hereford Breeders Association, and H. H. Gable, prominent Hereford breeder of Esparto. Bunting and Gable left for the East directly after the San Francisco show. They attended the American Royal at Kansas City and during the time between that show and the International visited many of the leading herds.

Bunting says that the officers of the American Hereford Breeders Association consider California a great field for Herefords and that they will probably offer unusual encouragement to the local breeders and to Eastern breeders who exhibit at the Coast shows next year.

W. T. Hollingshead & Sons have recently sold 18 head of their fine Duroc-Jerseys. The most recent sales are: Mrs. Geo. Mills, Sacramento, spring boar; C. Ruff, Pasakanto, spring boar; Smith & Hurni, Oakland, gilt bred to their great yearling boar, Uneeda Sensational Defender; A. C. Havens & Son, Orland, two fine fall sow pigs; Roland Fallis, Hamilton City high school pig club boy, two sow pigs.

For your own protection order ONLY Germain's specially-selected, proven, tested, true-to-type Hairy Peruvian Alfalfa Seed. Our supply is limited and we may be oversold in double-quick time. To avoid disappointment place your order at once. Wire, phone or write for a reservation of seed, stating amount wanted—or call personally if you can. Orders will be filled as received.

Whether you intend to plant now or next Spring, we advise you to buy your seed now. Increasing demand means increased prices.

W. J. HIGDON, Owner TULARE, CALIF. H. L. REDD, Herdsman

Diamond Bar Ranch

By H. S. Hoard

The Diamond Bar Ranch at Spadra has attracted a great deal of attention among livestock men because of the fine herd of Duroc-Jersey swine which has been established on this ranch.

The foundation herd was selected with great care and discrimination. Not only were the best animals selected from many of the best herds in California but many of the best herds in Iowa and Nebraska were drawn on. The result is that the Diamond Bar Ranch herd of Durocs stands as one of the best herds in the United States today. As an evidence of the high position which this herd holds it is well to point out that this is the only herd of Durocs in the United States which is headed by three grand champion boars. These three great boars are Ace of Pathfinders. Mammoth Sensation Junior and California Great Wonder.

The winnings of the Diamond Bar Durocs on the 1919 show circuit is another evidence of the high quality of the individuals which go to make up this herd. At the California state fair this herd won first on junior yearling boar, first on junior yearling sow, first on senior sow pig, junior championship on sow, first on aged herd, first on get of sire and first on barrow, and many second and third prizes.

At the Southern California fair at Riverside the winnings were equally heavy including first on aged boar, first on yearling boar, first on yearling sow, first on senior sow pig, senior champion boar, grand champion boar, junior champion sow, first on aged herd, first on get of sire, and many second and third prizes.

At the Los Angeles Livestock Show which was conceded to be the greatest Duroc exhibit ever held on the Pacific Coast, this herd came off with flying colors, mostly blues and purples. This herd won five championship, five first, two second, four third, and two fourth prizes, as well as the large silver cup given by the American Duroc Breeders Association for the best exhibit of Durocs.

It is remarkable that one herd could win so heavily against the strong competition which there was at all of these shows, and is evidence that the Diamond Bar Ranch is breeding the proven and popular type.

They are breeding the large heavy boned and backed type that have proven so popular throughout the Middle West. Their herd boar Ace of Pathfinders is said to be the second largest senior yearling in the world. He is not only large with bone, heavy and strong enough to carry his great weight, but he is also smooth and of refined quality. He was first in his class, junior champion boar and grand champion boar at the Los Angeles Livestock Show. He also was a winner in his class at the National Swine Show and headed the get of sire and aged herd groups at both the National Swine Show and the Los Angeles Livestock Show.

The Diamond Bar Ranch will hold its first public sale of Durocs on Tuesday, January 28, 1920, at the ranch. The offering will consist of 40 head of choice sows and gilts. These will all be bred to farrow in March, so will mean a quick return on the investment.

They are bred to the three grand champion boars which, combined with their high individual merit, show promise of farrowing some outstanding young pigs.

The Diamond Bar Ranch herd of Durocs consists of over 800 head of various ages so that it is possible to select anything that a breeder may desire.

Catalogues describing the blood lines, breeding dates and other "vital statistics" will soon be ready for distribution. We suggest that those of our readers who are interested in Durocs send in their names at once so that they may receive a catalogue as soon as they are ready.

Butter and Cheese Scoring Contest

By S. L. Denning

The third scoring of the 1919 California Educational Butter and Cheese Scoring Contest was held in Davis on November 20. This scoring was held in connection with the Experienced Buttermakers' Short Course and the California Butter, Cheese and Ice Cream Makers' Association Convention.

Twenty-one samples of butter and four cheese were entered for scoring. T. J. Harris of San Francisco, H. S. Baird and S. L. Denning of Davis were the judges. C. A. Holm of the Moss Rose Creamery of Salinas received the highest commercial score on butter of 93¼. The Watsonville Creamery of Watsonville received the highest average of commercial and composition scores of 96½. O. Gheggiolo of the University Farm Creamery received the highest score on cheddar cheese, of 93.

The California Butter, Cheese and Ice Cream Makers' Association held a competitive butter judging contest in connection with the scoring. The following results were received: A. R. Wickham, first; G. A. Dondero, second; V. Mulberg, third.

Following is a list of entries which scored 90 or above:

BUTTER

Name	Creamery	Address	Score
C. A. Holm	Moss Rose	Salinas	93¼
	Watsonville	Watsonville	93
P. Peterson	Valley Flower	Ferndale	92½
V. Simonsen	Madera	Madera	92½
R. L. Gibson	Salinas	Salinas	92
D. M. Young	University Farm	Davis	92
C. A. Johnson	Bodega	Bodega	92
	Hooper	San Francisco	91½
A. Wirz	Hollister	Hollister	91½
Hans Bino	Petaluma Coop	Petaluma	91½
N. Jensen	Uneeda	Lodi	91½
Washington Market		San Francisco	91
Fred Deter	Montague	Montague	91
W. F. Butler	Visalia Coop	Visalia	90½
J. R. Welke	Sierra Valley	Loyalton	90
S. N. Richardson	Crystal & Gold Nugget Co.	San Jose	90

CHEDDAR CHEESE

O. Gheggioli	University Farm	Davis	93
J. A. Jack	Watson Cheese	McArthur	92

Butter Shows Poor Body

Of the 21 samples entered none were scored perfect on body. In the former scorings it has been only occasionally that it has been necessary to score an entry 23½ in body. In this scoring five of the entries scored 23½ or lower. The temperatures employed during churning probably influenced the body to a large extent.

The buttermaker will do well to closely observe temperatures and to keep an accurate record of them. A churning temperature should be used that will complete the churning in from 40 minutes to one hour and give a buttermilk containing not more than two-tenths per cent of butterfat. The buttermilk should be removed immediately after churning and the butter washed with water which is within two degrees of the temperature of the buttermilk. During the working the butter should neither soften nor harden materially. The butter should be fairly firm during the entire working. At this time of the year when many cows are completing their lactation period and when a few cows are fresh, special attention must be given to body. To get good results the temperature must be watched closely.

Results of the 1919 contest together with plans for the 1920 contest will be published about January 1.

SWAT THE FLY BEFORE HE'S BORN

There seems to be nothing that is altogether satisfactory in keeping flies away from animals. Anything that will accomplish this end and last for longer than an hour or two must be of an oily or tarry nature and is otherwise objectionable. The following has been recommended and found to be quite unsatisfactory:

One pound rancid lard mixed with one-half pint kerosene and applied with the hand.

Three parts fish oil mixed with one part kerosene can be applied with a spray pump. A spray pump made of tin can be purchased for 75 cents and is not only useful in spraying the bodies of animals but can be used for spraying small shrubs, chicken roosts, etc.

A mixture that will last longer and is very effective consists of two parts crude cottonseed oil or fish oil mixed with one pint of pine tar. This can be best applied with a brush.

Crude petroleum is most effective and lasting but makes the animal very dirty.

A convenient fly poison to use in the house is bicromate of potash, one dram in two ounces of water. This may be placed in saucers and is not dangerous to human life. Also one teaspoon of formalin in one-half pint of water may be placed in several places in a building, but must be kept away from children.—Dr. Geo. H. Glover, Colorado Agricultural College.

Xmas and New Year's Greetings

from Frank P. Gardiner & Son to Our Friends and Customers

We also wish to announce the safe arrival from Ed Kerns of Stanton, Neb., of the latest and Greatest Sensation to arrive on the Pacific Coast.

Greater Sensation

Sired by

Great Sensation

who sired world's champion boar at National Swine Show, 1919. Also the world's grand champion boar 1919. His get has won more prizes at the fairs and swine shows this year than any living boar.

NOTICE—To farmers and breeders: We will produce over a thousand high class Durocs next year sired and damed by the best blood lines of the breed. Write us your wants. Satisfaction in every transaction. Prices reasonable.

The Seedsmen

Under this head a prominent seedsman says his firm in its 1920 catalogue will address the public about as follows, believing it will appreciate this explanation of the inside workings of the seed trade and this firm's endeavor to aid all in need of advice:

"The man who goes into the business of selling seed for the sole selfish purpose of making the most money out of it is not a conscientious seedsman. He is a trader who buys in the cheapest market regardless of quality and by fictitious values sells at a price out of proportion to the real worth, and too often the seed turns out to be not at all as it is advertised or represented, resulting in much loss to the customer. It is because of such practice that the seed trade has suffered calumny and is often regarded with suspicion, so that a grower is apprehensive when he buys seed.

There are reasons for this apprehension. We will undertake to throw some light on the inside work, behind the scenes as it were, of the seed business.

There are in every town one or more merchants selling seed as a side line—it is one of the many household necessities that go to make up a general store. The proprietor knows nothing of the reliability of the seeds other than the label on the package. The customer buys, scarcely knowing any more, and may often be disappointed with the results obtained after a season of hard work—and he may have a feeling that the seedsman was dishonest.

Cooperation With Growers

Now the truth is that there are comparatively few exclusive seedsmen in the country. By seedsmen we mean men who have given years of hard application to learn the business. Unlike general merchandise that is bought from a factory and sold by label or by its appearance, seed must be pedigreed. The dealer must buy from a professional grower who knows what types of vegetables are wanted. Professional growers specialize; some in certain varieties of vegetables; some in assorted varieties, selected according to the soil and climatic conditions suited to each particular variety. Many growers specialize in flowers, others in grain and some in grasses. All have a reputation to make and to maintain if they would succeed. The seedsmen know these growers and their reputation for reliability and are seldom deceived by them. The result is that seeds are becoming more and more reliable from year to year through this intelligent cooperation of seedsman and grower.

Duties of Seedsmen

The seedsman's duties do not end with the buying of seeds; he must educate the customer. Probably more than 75 per cent of the errors and disappointments are because of the lack of knowledge on the part of the buyer who has seen good results of certain crops and fails to note the time of planting, climatic and soil conditions under which these crops were grown. He buys and plants the same kind of seeds, probably out of season and under his own conditions, which may be entirely different, with the result that there is whole or partial failure, which he promptly attributes to inferior seed.

Therefore, it is the seedsmen's duty to safeguard their customers against such error by advising them to plant the right seed at the right time under right conditions.

The Catalogue

Many seedsmen attempt to do this through the catalogue, but the space is too expensive to enter into detail; therefore, tables have been compiled to cover all the general rules of planting, etc., but every rule has its exceptions, and no table can be compiled to meet all conditions. Here is an idea of some of the expense of the catalogue. With postage at the rate of one-half cent for each ounce or fraction thereof, a seedsman will crowd to the limit of six ounces to obtain the three cent postage—a few words more may mean another page or two requiring an additional fraction of an ounce which requires an additional cent for postage; also additional expense for more paper and labor. Therefore, on 100,000 catalogues a few lines more means an additional expense of $1,000 in postage and approximately $500 in paper and labor, a total of $1,500. This explains why seed catalogues are usually printed in small type and crowded at that."

Hints for Winter Motoring

Some adjustment of the carburetor is necessary as a "winter position." The main adjustment screw, as well as the lever that controls the heat shutter or air intake, should be adjusted, but the owner should not try to make the adjustment himself unless he is an expert mechanic. Even the best written instruction books are not any too explicit on the subject of carburetor adjustment.

In order to get the utmost mileage and satisfaction, it is well to take the car to an expert and have him adjust it so that it will run well without using an excessive amount of gasoline and yet not backfire because of too lean a mixture.

Of course, for starting it is necessary to use whatever "choke" device there may be on the car. It should be rembered that when the choke is fully opened it admits raw gas, without any air. Therefore, after hearing one or two explosions of the motor, the choke should be reduced to one-half or one-quarter, so that the carburetor will draw a supply of warm air from the exhaust manifold. After reducing the choke and running five or ten minutes in this position, the choke should be returned to normal.

If the mistake is made of running the motor after it has been warmed up, without then regulating the wide-open "choke," the driver will not get the maximum mileage and, in fact, is apt to choke his engine to the point where it will not run at all.

The adjustment of the carburetor depends to some extent upon the ignition system used. This is especially true concerning winter driving. For example, if the car depends upon battery ignition, there will be trouble in starting on a cold day and, in spinning the fly-wheel with the starter, the driver may be obliged to run down his battery to the point where it becomes weak, before he can get started at all.

This means that he will only have enough "juice" left to get going long enough to begin to recharge it, or he may have to run on the generator for a while, which is not good practice.

The point is, that to get going at all with a battery-ignition system, it is necessary not only to pull the choke button entirely out but, in addition, to have the carburetor adjusted for a very rich mixture even for ordinary running.

The motorist who depends upon battery ignition during the winter months will use more gasoline to the mile than the driver who has a magneto.

With a magneto, even if the electric starter fails, it is still possible to crank the engine and get going on the magneto spark, as the latter is very hot and fat and will burn a much leaner mixture than is possible with battery ignition. This, of course, is a scientific fact and has been proved by numerous tests.

CONQUERING POTATO WART

Reports given at a recent conference of officials from West Virginia, Pennsylvania and Maryland with the federal horticultural board of the United States department of agriculture, called to consider the status of the potato wart disease, show that there has been only a slight spread of this recently discovered menace to the potato industry of America, and that by planting immune varieties further losses from the disease can be practically eliminated. The potato wart is one of the most destructive maladies attacking potato crops in

Europe, and heretofore no means has been known for cradicating it from the soil, once a garden or a field becomes infected. Not only have the investigators for the department found varieties of potatoes which are immune, but they have devised a method of thoroughly disinfecting the soil by the use of steam and formaldehyde.

As a result of the conference it is announced that the authorities of West Virginia and Pennsylvania will take steps to assist gardeners in the infected regions in the purchase of varieties of seed known to be immune. It may be found advisable, also, to undertake the disinfection of a limited number of garden plots. As the cost of this work is approximately $1,000 an acre, the efforts along this line will be limited until the most effective and economical methods have been discovered.

The wart is a disease attacking the tubers and also the stems, causing irregular, warty discolorations beginning in the tender tissues near the eyes and enlarging until the entire potato may be changed into a black and worthless mass. Young galls are whitish or greenish, suggesting a cauliflower head. In the recent outbreak the disease manifested itself in a severe form, practically destroying all crops in many gardens.

To determine whether or not American and other varieties were immune or resistant to this disease, a large number of commercial varieties and promising seedlings, as well as 29 immune English varieties, were grown the past season in wart infested areas. Among the commercial American varieties the following were found to be immune: Irish Cobbler, Johnsons Flour Ball, and Early Petoskey of the Cobbler group, and the Spaulding Four of the Rose group. All of the immune English varieties kept their immunity when planted in Pennsylvania. The seed was imported from England. Seven of the English varieties gave excellent yields this year, but their adaptability to American conditions is still in doubt. It is believed that by planting of immune varieties in infected areas and by the fumigating of the soil in certain instances the disease can be effectively stamped out.

Fumigation is carried on by sprinkling a solution of formaldehyde on the soil and then covering the infected area with a wooden box. Into this box steam is injected at high pressure, causing the formaldehyde to penetrate the soil for a foot or more. Seed grown in this soil produced entirely healthy plants, showing that every trace of the disease had been eliminated.

TRACTORS IN GREECE

A large percentage of the farm machinery used in Greece is of American manufacture, but the Royal Greek Agricultural Society is seeking to determine what type of farm tractor is best and is trying to arrange a tractor demonstration and has invited manufacturers to take part. The American Red Cross has had an expert in Greece for four months, studying soil conditions and agricultural methods, and a report is shortly expected. At present there is a strong demand for tractors, threshers, harrows, plows, grain binders, horse cultivators and many other implements.

SEED POTATOES TO IMPROVE

Oregon is going after the California seed potato market. Potato certification has been removed from the state college and is in the hands of the state board of horticulture of Washington, which is putting on a regular potato seed campaign, funds having been appropriated by the legislature for that purpose. With the support of recent legislation in California, the California seed potato market will take on a different aspect than has obtained in the past.

PERUVIAN ALFALFA

An investigation of the seed alfalfa market proves the growing popularity of the hairy Peruvian variety. It seems better adapted to the semi-arid Southwest than the older and better known type and stands extremes in both heat and cold without checking growth. Its yield is also heavier wherever given trial. In spite of this growing popularity the price has not risen in proportion. Last year common alfalfa brought $20 a hundred, while the Peruvian was $45. Now the common type is $45, while the hairy variety has advanced only to $52 this year. Seedmen report heavy demand for all alfalfa seed.

MARKET FARM PRODUCTS THROUGH ADVERTISING

"I toiled, I sweat and I produced—and I found that I must sell at the other mans' price and for his profit. I produced better stuff than my neighbors only to find that theirs set the price, very often, at which I must sell in the local market. By consistent advertising I have been able to secure a fair price. My experience is that advertising pays. It frees me from my neighbors' limitations. It increases my self respect and has added hundreds of acquaintances and friends to my circle."

This testimony comes from Frank Pyle of Kansas, who has made a success in selling through advertising apples and cider. He uses every care to make his products the best to be had. Farmers who are not satisfied to sell a superior article at the price paid locally for inferior articles or who produce a specialty and seek a wider market should try advertising. Go moderately at first, of course, until through experience the greatest returns can be forecast from the use of some particular kind of advertising.

Farms which produce a surplus of extra nice honey, sorghum, cured meats, fruits, berries, eggs and the like might profitably acquaint others with the fact.

STATE HIGHWAY TREES

The policy of the state highway commission is to preserve all the trees aligning the roads under its control. In answer to an Orange County farmer asking permission to cut down the encalypts in front of his property the commission denies his request for the reason "that such trees are considered an enhancement of the beauty of the state highway and their removal is contrary to the policy of the commission to preserve shade and ornamental trees along the state highway," and adds: "Frequent petitions are presented to the highway commission for permission to cut down the trees on the state highway, where the said trees shade their land or cut off their view, etc. The commission's policy in such matters is to consider the large interests of the public and to preserve, not only the trees, but all other landmarks that make the highways attractive and traveling a pleasure."

NOT ENOUGH LAND FOR EX-SERVICE MEN

Owing to the high cost of labor and material the state land settlement board bas reached the conclusion that the funds appropriated at the last session of the legislature will not be sufficient to buy, develop and colonize two areas. It has given notice that no more land will be purchased until the tract in Merced County has been improved and settled. The notice to those who have offered lands has carried the explanation that the board has been reluctant to take this action, in part because some of the tracts offered were regarded as well suited to closer settlement, and in part because the large number of ex-service men who understand farming will not be able to acquire farms of their own in one settlement.

MEXICAN RICE CROP

The rice crop of the Yaqui Valley in Sonora, Mexico, for 1919 will be about 45,000 sacks of 110 pounds each as compared to 15,000 sacks in 1918. As one-third the present crop is sufficient for the west coast of Mexico and the export of rice to the United States is prohibited, the disposal of the crop becomes a serious problem. Communications with the interior of Mexico are very unsatisfactory and it appears the local territory will have to consume the crop, more especially as foodstuffs are scarce and high in price.

FOOTWEAR

"Did you know that they could make shoes out of all kinds of skins?"

"How about banana skins-"

"They make slippers out of them."—Pearson's Weekly.

"It Digs Cellars"

"Look at that blast! There's a day's work done with a bang. How long do you reckon it would have taken you boys to loosen all that dirt with pick and shovel, eh? There's no use talking—when you've got a heavy job of digging, no matter whether it's for tree planting, post holes, ditches, or cellars, there's nothing in the world that'll beat

HERCULES DYNAMITE

"I never knew a tenth of the things you could do with explosives until I sent to the Hercules Powder Co. for their book, 'Progressive Cultivation'. I'd tried dynamite before and it was saving me money but there were a lot of tricks in the game I didn't know until I'd read that book.

"No matter how simple blasting seems, boys, there nothing like knowing the best methods to use—the methods that give you the maximum result with a minimum of expense for material and labor—and this book tells you all about them.

"And the best part is that any farmer or orchardist can get 'Progressive Cultivation' *free* if he signs the coupon and mails it to the Hercules Powder Co."

THE BEST SOURCE
of Nitrogen
for Citrus Fruits is
NITRATE OF SODA

because of its instant availability as plant food. Growth is promoted immediately after the application is made.

It is taking chances to apply any Nitrogenous Fertilizer which is not Immediately Available as food for plants, because of the tendency to unduly prolong growth and to delay maturity. It is also fatal to apply high-grade fertilizers too late.

In California, on alkaline soils or soils having alkaline tendencies, apply Nitrate of Soda with an equal quantity of acid or superphosphate. This combination will tend to diminish any black alkali present.

The fight against wild barberry is being vigorously prosecuted by the department of agriculture.

Imperial Grows Variety

DR. DAVID FAIRCHILD, the plant introduction man of the department of agriculture, has been inspecting productions of the Imperial Valley and especially looking up some of the plants and crops which have been introduced by the department of agriculture. He says that the Imperial Valley farmer is the greatest agent for the introduction of foreign plants, and many sections of that valley have plant strangers from the uttermost parts of the earth. In listing some of these productions the Brawley News quotes Dr. Fairchild:

"South America furnished hairy Peruvian and Chilean alfalfa. The former is especially valuable to North America because of its hardy and cold resistant qualities. It is a higher yielder and a more leafy strain, starts quickly after a cutting, aspires for height and grows late in the fall season, making it an ideal variety.

"Arizona has furnished the tepary bean. It was found among the Pima and Papago Indians and is believed to have been domesticated by an unknown prehistoric race, evidenced by nameless ruins and old canals in the southwest and in northern Mexico. It is a heavy yielder in warm climates.

"From Japan come Japanese persimmons; from Manchuria, hemp; from Australia, wheat; from Northern India, roselle; from China, ramie; from South America, Peruvian and Chilean alfalfa; from Northern China, choice jujubes; and the list can be made practically endless. Africa furnishes the rare Sultana grape, the Deglet Noor, Haliawi and Khardrawi dates; Kafir corn, Rhodes and Sudan grass, milo maize and other rare grains, grasses and fruits. India furnished pomegranates; the Valley of the Euphrates, cantaloupes; and Asia Minor, mulberries. Many of these are recent introductions in the United States, while others are yet in the experimental stage.

"Twenty years after alfalfa came to California, two emigrants arrived at the Golden Gate from Africa bringing with them seed of the brown durra and white durra. They were the first of the grain sorghums to reach the United States. Later, their brothers, the milos, kafirs and shallus, arrived. Some of these are past the experimental stage; some are now being experimented with. From India alone the department of agriculture has introduced 300 varieties of sorghum for trial. Many of these have been tested out in the Imperial Valley."

Crop Yield Steadily Increases

In reviewing agricultural production in the United States Secretary Huston gives interesting facts as to increased crop production to the acre during the past 25 years. He says:

"In view of the facts it is singular that the notion should still be disseminated that American agriculture has been deteriorating and that there is ground for pessimism about the future. It is true that the production of some of the staple commodities has not kept pace with population, but this in itself may be of little significance. The advance in agriculture has revealed itself not so much in the expansion of the staple commodities as in a greater diversity of products, in the appearance of new crops, in the rise of minor crops to large proportions, and the availability of supplies throughout the year. But even in reference to the staple products as measured by one important test, there has been a very marked upward movement. The yield per acre of crop production in the United States has gradually increased. The average rate of this increase for the past 25 years has been small, it is true, being only one-half of one per cent a year, but the aggregate results have been enormous. This upward trend is not readily observed in yields from one year to another, owing to the wide yearly variations caused by the differences in seasons. But when averages are obtained for a series of years it is readily observed. During the seventies and eighties, when there was a vast expansion in farm area in the West and crops were grown on a more extensive scale, the tendency of yields was downward. Since the early nineties, however, it has been upward. For the ten years ending with 1890 the average yield per acre of wheat in the United States was 11.8 bushels; for the ten years ending in 1918 the average yield was 14.8 bushels, or an increase of 25 per cent. In the first period the average yield of corn was 23.4 bushels; in the second 25.8, or an increase of ten per cent; of oats 25.9 in the first period, in the second of 32.2, or an increase of 24 per cent; of potatoes 72.9 bushels for the period and 96.8 for the second, an increase of nearly 33 1-3 per cent. Cotton, notwithstanding the ravages of the boll weevil, increased from an average of 169 pounds in the first period to 175 pounds in the second, an increase of 3½ per cent. All other field crops have likewise improved in yield, the average for the ten years ending in 1918 being 16 per cent greater than that for the period ending in 1890. This tendency is general throughout the Union. It is not due to the shifting of production. For example, in the older state of New York the increases for the two periods were as follows: Corn, 24 per cent; wheat, 44 per cent; oats, 21 per cent; barley, 24 per cent; buckwheat, 43 per cent; potatoes, 30 per cent; hay, 10 per cent; weighted average of all 18 per cent."

Roselle

The roselle plant is a half-shrubby annual hibiscus with attractive palmately five-parted leaves and handsome but stemless yellow flowers with a crimson eye. It is of considerable value as an ornamental and is of the same family as the fine hibiscus from China so much grown in gardens.

It is as a jelly plant that roselle is best known, but there seems to be a little misunderstanding as to the part used. The edible portion is the fleshy calyx which is ready for picking two or three weeks after flowering. The seed pod is not edible and is separated from the calyx at picking time or removed after harvesting. Roselle is also used for coloring fruit juices, the green leaves are boiled for greens, the seeds are used for poultry food and the bast in the bark for fiber. In Hawaii it is a wonderful cropper for the edible portion, but in India it has long been grown as a fiber plant, along with other species of hibiscus. It grows best in countries of heavy rainfall, and Hawaii, where the annual precipitation is 150 inches, grows crops of 17,000 pounds of fresh fruit per acre, an immense yield. The seeds are planted either in the garden or in boxes and the young plants transplanted when six inches high. The plants are usually set four feet apart and must be kept well watered throughout the season. The crop is dried in houses, ten pounds of fresh fruit making one pound of the dry, and Hawaii's crop is shipped to the United States.

BEANS MOVING

The California Bean Growers' Association, with the assistance of Herbert Hoover, has sold 3,500 tons of the 1918 crop of white beans for export, and this order will be filled from holdings now in New York City. This order was placed with the European relief commission. After many months of waiting this is the first actually completed sale for export and the trade is now proceeding to cover its season's requirements at prevailing prices before the normally expected advance.

Mr. Hoover is quoted as saying: "There is no reason for American beans selling below cost of production as Europe needs all surplus bean stock over home requirements." It is believed that from now on the filling of foreign export orders will soon absorb the 1918 surplus.

NEW ZEALAND HEMP

During last year New Zealand sent to the United States native hemp or fiber to the amount of 15 568 tons. This plant, Phormium tenax by name, grows as well in California as it does in New Zealand and may be found either in its green or variegated form in the gardens of every county in the state. It is known to gardeners as the New Zealand flax. It is a tough hardy plant, growing in all kinds of soils and situations. In its native country it grows on rocky sea cliffs within the ocean's spray, but thrives best in low damp lands. Some day California will plant it in large quantities, for we now have a small acreage that makes perfect growth.

SWEET POTATO STANDARDIZATION

One of the most important features of the 1919 fresh fruit standardization law is the provision which includes vegetables. By the specific mention of sweet potatoes the legislature has clearly signified its recognition of the need for the standardizing of the pack of this crop.

Certainly one need not look far in the markets today to find the reason for applying the principles of standardization to the packing of sweet po-

tatoes. The great variation in size and shape in the average field makes this crop peculiarly adaptable to the purpose of any unscrupulous packer. When prepared for market in lug boxes the potatoes of superior quality and size are made to sell the inferior stock by the simple expedient of placing the larger potatoes around the outer and more exposed portions of the box, filling in with stuff which in many cases is entirely unfit for table use. This practice is bad for the sweet potato industry. Moreover it is bad, decidedly bad, for the consumer, for he is thereby made to pay the top price for the poor potatoes with which the interior of the box is filled. This practice is defined under the standardization law as a "deceptive pack" and the packer is liable for such a pack.

Sweet potato growers are naturally concerned over this situation. A large percentage of the growers desire to standardize their output, realizing that it is by this means alone that they can secure and hold satisfied customers. With the present method of packing declared deceptive, however, there are but two alternatives for the producer. Either he must grade his sweet potatoes or he must dispose of them unpacked as field run.

CONSERVING AND DEVELOPING WATER

Permanent organization of the San Joaquin Valley Water Conservation and Development Association was perfected at a recent meeting in Tulare, following a water conference held in the same city at the call of the Tulare board of trade.

Permanent officers were elected and a constitution and by-laws adopted, the purpose of the organization being stated "to consider all water problems affecting the counties of Kern, Kings, Tulare, Fresno, Madera, Merced, Stanislaus, Tuolumne, Mariposa, Calaveras and San Joaquin, to work harmoniously for the adoption and carrying out of a comprehensive plan for irrigation, drainage and reclamation and the conservation of the water supply of the entire San Joaquin Valley."

Membership is open to irrigation districts, ditch companies, water users associations, power companies, commercial organizations, boards of supervisors and city trustees and other corporations and individuals interested in water conservation. Organizations are to pay a yearly due of $25 and individuals $5. A large membership was signed at the meeting.

Resolutions were adopted opposing the referendum on Senate Bill 493, calling for amendments to existing laws so that comprehensive irrigation projects may not be interfered with by smaller proposals within the same territory, and supporting the fight of the Kern County farm bureau against Miller & Lux to prevent the land corporation from killing the extensive system mapped out for irrigating Kern County.

Permanent officers elected are William Glass, Fresno, president; John T. Crowe, Tulare, secretary; National Bank of Visalia, treasurer. County vice-presidents and alternates in the order named are: Tulare, W. B. Kiggins, Lindsay; C. H. Slaughter, Tulare; H. T. Miller, Kern; W. C. Hannawalt, King; W. A. Long, alternate to be named later. Fresno, John Fairweather, M. B. Harris; Madera, J. F. Griffith, Craig Cunningham; Stanislaus, Allen Talbot, L. L. Dennett; San Joaquin, Al Ferguson, E. R. Weeks, Jr. Counties not represented to name their their representatives in 30 days. The vice-presidents will have charge of the organization campaigns in their respective districts and keep each other and the general organization advised of developments in their sections of the valley.

Representatives of most of the commercial organizations, irrigation districts and water users associations of the valley were present and enthusiastic applause from the floor greeted every mention of greater unification of effort for the conservation and development of the natural resources of the valley. Annual meetings will be held at Fresno, with quarterly meetings at points to be designated by the president.

Rare Sugar Found in Honey

Although known to occur in various forms, even perhaps as one of the constituents of the manna of Scripture, melezitose is one of the rarest sugars. Minute quantities have been available to scientists for many years, but the supply has never been sufficient to permit of extensive experimentation. Now, by the aid of some Pennsylvania bees, many of which lost their lives, the United States department of agriculture has several kilograms of this rare substance, extracted and purified in the bureau of chemistry.

The bees in certain sections of Pennsylvania were storing up honey that crystallized, with the result that in the following winter seasons the bees were not able to digest it, and starved. The crystallized substance in the honey was found to be melezitose, which derives its name from melez, the French name for the larch tree on which it was originally discovered in the form of honeydew. It also occurs in a sugary incrustation, or manna, on a leguminous tree in Persia and adjoining countries. Recently it has been found by the bureau of chemistry in a similar product on the Douglas fir in British Columbia. And now it has turned up in Pennsylvania, stored away in the honeycomb in numerous hives. In this instance the following origin of the substance has been worked out:

The scrub pine, and rarely other species of pine, are subject to attack by a plant louse and by a scale insect. In the course of their life activities these insects produce a honeydew which is rich in melezitose. In dry summers, after the white clover flowers have ceased to yield honey, the bees turn to this honeydew and collect it; but it crystallizes as fast as they store it away. This occurred in 1917 and 1918, and considerable losses were suffered by beekeepers. In 1919 the weather was so moist during July that no melezitose was gathered by the bees at all. But it probably will be collected in future whenever the summer is dry, and the honey of central Pennsylvania may afford a permanent source of sugar previously so rare as to be only imperfectly known. The bureau of chemistry extracted considerable quantities from the honey of 1917 and 1918 and is making extensive experiments with it. Rare as it has always been there is a definite demand for melezitose for use in scientific laboratories. It can be distinguished from other sugars by certain peculiarities of crystallization observable with the polarizing microscope.

STORE MILO

That many of the most important and productive sections of California where milo and Egyptian corn is grown will have extensive warehousing facilities for taking care of these two crops during 1920 is the present indication from advices reaching officials of the Alfalfa Growers of California.

Growers of corn and milo have felt for years the necessity for warehouses for the proper care of their crops after harvesting and during the last few months definite action has been taken by growers in several sections to establish permanent warehouses in such a way and in such localities as will benefit the greatest number of growers in each district.

Consumption of milo and corn is practically constant. On the other hand production is seasonal, and therefore it is highly important to have storage facilities that will permit the maintenance of sufficient supply. This will tend greatly to eliminate the middleman's profit and stop speculation in these two crops.

SMALL THRESHING RIGS RECOMMENDED

Many small groups of Ohio farmers this year have purchased small grain separators capable of being run by the ordinary tractor. Sometimes the tractor has been purchased also. The plan has worked out excellently, according to R. F. Taber, farm management specialist of the college of agriculture. The men get their threshing done in season, less help is required, and so the work is practically all done by exchange of labor.

On September 30, 1919, there were operating in the United States 3,830 farm loan associations. The total mortgage loans made by the federal land banks through these associations to September 30, 1919, to 100,412 farmer borrowers, amounted to $261,175,346. During September 7,485 applications were received asking for $25,491,081. During the same period 5,174 loans were approved, amounting to $15,816,179. Altogether 219,205 farmers have applied for loans under this system, in the aggregate amount of $605,575,801.

Save money on fertilizers this year by utilizing the inert fertilizing elements in your soil, with an application of AGRI GYPSUM. Practically all soils abound in valuable elements that are not available as plant foods until a chemical action takes place through the application of AGRI GYPSUM — (Calcium and Sulphur). The sulphur in the Gypsum is a fertilizer. Gypsum loosens the soil when it is inclined to pack and rounds out its culture and preparation. Its application is apparent in the resulting growth.

Agri GYPSUM

AGRI GYPSUM is a specific for black alkali. It turns the **harmful** sodium carbonate into **harmless** calcium carbonate. Experiments have been made where the surface of the ground was covered with a thick crust of alkali. Grass would not grow on it. After treatment with Gypsum bountiful crops of wheat, barley and other grains have been produced. This is a matter of official record.

Stable manure retains its ammonia when AGRI GYPSUM is applied. This also prevents the disagreeable odor of escaping ammonia gases, harmful to the eyes of man and beast. It will pay you to keep AGRI GYPSUM on hand where you can apply a few handfuls occasionally to the manure heap.

Alfalfa is one of the largest consumers of sulphur—AGRI GYPSUM contains more than 40 per cent of this needed element and supplies more vigorous growth at less cost than any other fertilizer compound.

Call for AGRI GYPSUM. It is made by the largest producers of Gypsum in the world, a company that grinds it fine so that it goes farther, acts more quickly and most thoroughly, giving the best results. The analysis will quickly convince you as to the efficiency of the material as a crop producer.

Dealers handling AGRI GYPSUM may be found almost wherever Gypsum is used. If your dealer cannot supply you write us.

A Four Story Poultry Show

By Jean A. Koethen

THE annual fanciers' show of the Los Angeles Poultry Association, which closed last Saturday night after a very successful one week's showing, impressed me as the best show that has been held in Los Angeles for several years. This was not altogether on account of the larger number of entries, which totaled about 1,300 exclusive of pigeons, nor because of the generally large classes and the fine quality of the birds. The arrangement of the coops in the four stories and balcony of the old Express building on Hill Street and the fact that the building was comfortably warm had a good deal to do with the success of the undertaking. Some of the shows that have been put on in the last five years were in buildings so cold that the most enthusiastic "fan" found his or her (more frequently "her," perhaps) enthusiasm reach the zero point long before the end of Bantam Alley was reached. This year everybody was comfortable and had time to visit with the feathered beauties, and it was noticeable that there was not a sick bird anywhere. Let us hope the managers of future shows will learn a lesson from this one held in a really comfortable building.

Then that climb from story to story was delightful. Anticipation had always a chance to work. There was something new and interesting on each floor, and even if one went up and down, as I did, more than once, the novelty did not wear off. Of course, one did not need to climb. There was an elevator with a charming driver, ready to take you anywhere at any time, but using the elevator spoiled the gradual approach and gave one no chance to guess from the sounds just what breed was in control of that particular floor. To be sure, there were some folks who did not fully understand at first that this was a progressive show. A rosy cheeked woman from Minnesota stopped me in Barred Rock alley. "This is a bum show," she challenged me. "I wouldn't give ten cents for it. I've been to lots of shows back in Minnesota but I never saw anything like this." Ten minutes later I met her upstairs among the Reds. "Say," she ejaculated, "I didn't know about this. I thought that one floor was all there was, and was just going home when the man at the door told me I hadn't seen it all."

Seen it all? I should say not. The Barred Rocks and White Wyandottes on the ground floor were just the beginning. Fine birds, too, but when you pay for a perfectly good show you don't want to be cut off short with two breeds. The balcony was devoted to pigeons. Then on the second floor came Rhode Island Reds and Whites, some more Wyandottes, White Rocks, Light Brahmas and scattering exhibits. Another flight up came the high flyers of the poultry yard, Leghorns, Anconas and Minorcas, with a nice line of Buff Orpingtons to ballast them. Approaching the fourth floor one easily recognized the falsetto cackle of bantams and the deep voices of turkeys and geese with that intermingling background which could be nothing but the quacking of ducks. Whoever arranged the coops in this artistic and strictly scientific manner was a genius.

Reds Predominate

Shall we never again have a show in which Rhode Island Reds do not predominate? There was a time when we always expected to see Barred Rock alley the longest, but for several years Reds have kept the lead. This year they led again with 214 birds besides a few in the selling class on the fourth floor. Barred Rocks were a good second with 127 birds and Anconas third with 115 birds. No other breed approached these three. There were fifty-odd Andalusians, and about the same number of Black Minorcas, with White Leghorns, White Wyandottes and White Rocks all running in the forties. Dark Cornish, Rhode Island Whites, Buff Orpingtons and Light Brahmas were a step lower in the numerical scale, and there was a long list of scattering varieties; Sicilian Buttercups, Silver Campines, Speckled Sussex, Partridge Orpingtons, which were a very fine class, White Crested Black Polish, Silver Laced Wyandottes, White Minorcas, Buff Rocks and Buff Minorcas, and last, but not least, the few Java Jungle fowl and Silkies which everybody admires but no one cares to breed.

New Bantams

The number of bantam varieties, on the contrary, is always on the increase. Not only are these little creatures good mothers and good layers of small eggs, but they are pretty pets, and breeding a bantam variety from one full size is a fascinating venture. This year the bantam list includes Silver Duckwing Game, Black Breasted Red Game, Barred Rock, Red Pyle Game, Malay Game, Silver Seabright, Black, White and Buff Cochin, Black Tailed Japanese, Mille de Fleur, Speckled Sussex, Partridge Rock and Black Minorca. The Mille de Fleur is a parti-colored little bird, evidently of French origin. The Barred Rock bantams, which I do not remember seeing before, are very attractive little creatures and the little pullets look as if they might lay a surprising number of eggs.

The exhibiting of eggs and awarding of prizes for the best exhibits is certainly a long step in the right direction. The eggs in the neat boxes on the second floor attracted a good deal of attention, and if they were not laid by Anconas they might have been. If the other specialty clubs had been as zealous as the Ancona Club in advertising the merits of their stock as producers the walls of that building would have been interesting reading. "Want Eggs? Get Anconas." If you believe in your birds let folks know about them.

Turkeys and Ducks

There were nearly 40 bronze turkeys on the top floor, magnificent birds. Everybody admired them. Duck alley was longer than usual, with some fine specimens of White and Penciled Runners and the Buff Duck, which is as yet but little known.

The $50 in gold offered for the best display of any one variety of standard fowl went to the Hocking Poultry Farm, Los Angeles. The $25 offered for the best exhibit of fowls from outside Los Angeles County went to Mrs. Ben Davis, Jr., Cucamonga.

On Wednesday evening the members of the association held their annual banquet at Christopher's. The other nights addresses on poultry husbandry were given on the first floor.

The judges were James Tucker, W. M. Coats and W. S. Russell.

More cash prizes and silver cups were offered at this show than have ever before been offered at a show on the Pacific Coast. Twenty-two cups were awarded and 34 cash prizes given.

Poultry Queries

Conducted by J. A. Koethen

Cost of Egg Production

I have been much interested in the different egg laying contests, but have never seen the relative cost of production by the different breeds given. Or, in other words, do the small breeds return a greater profit on feed consumed?—Subscriber, Rosamond.

The report of the All-Northwest egg laying contest for January, 1919, states that for that month the feed cost for a dozen eggs was 18.9 cents for Leghorns, 25.8 cents for R. I. Reds, 24.7 cents for R. I. Whites, 23 cents for Barred Rocks, 22.4 cents for Wyandottes, 31.55 cents for Black Minorcas. The average feed cost per bird for the month was 29.3 cents for Leghorns, 35.3 for R. I. Whites, 31.8 for Wyandottes, 31.7 for Barred Rocks, 31.4 for R. I. Reds, 31.5 for Minorcas, 30.5 for miscellaneous breeds. Average return above feed cost was 63.6 cents for Leghorns, 50.1 cents for R. I. Whites, 53.1 for Wyandottes, 50.7 for Barred Rocks, 41.5 for R. I. Reds, and 28.4 for Black Minorcas. These

GERMOZONE The Best Pet Stock Remedy

For Poultry, Pigeons, Dogs, Cats, Rabbits, Parrots, Canary and other birds or pet animals, Germozone is a universal and safe remedy; for colds, snuffles, roup, sore throat, loss of voice or singing, influenza, bowel trouble, distemper, sore eyes or ears, canker, gleet, loss of fur or feathers, sores, wounds, skin disease, or other affections of skin or mucous membrane.

"My hens have never done so well as this year and haven't lost a single chick"—Mrs. Flora Kapple, Walker, Ia. "Simply grand for rabbits"—L. W. Browning, Boone, Ia. "Cannot praise Germozone enough. I use it for chickens, stock and household"—Mrs. Wm. Hoeppel, Hugo, Okla. "My bird puppies don't know what distemper is and I never had such good success before with chicks"—Curly Smith, Kennett, Mo.

Germozone is sold by most drug, seed and poultry supply dealers, or mailed postpaid in 25c, 75c and $1.50 packages from Omaha. Book on treatment of diseases free with each package.

Good Farming Pays

Every Farmer and Land Owner should be interested in something which will save labor, time, horse power, seed, and make bigger and surer crops. The Western Pulverizer, Packer and Mulcher. 3 machines in 1, will do all this. Its principle is different from any other roller, pulverizer or packer, it does different work and produces far better results, and we ask for a chance to prove this to you at our own expense.

Our free illustrated catalogue will prove our statement, and it contains lots of valuable information on up-to-date and better farming—worth its weight in gold to any farmer or land owner. *It's free.* Send for it today.

figures are for a single month and for only a few breeds but they give an idea of relative cost of production. Unquestionably Mediterraneans in general and White Leghorns in particular pay a greater profit on feed consumed than other breeds. This is why every commercial egg farm is stocked with White Leghorns.

Feed for Pullets

I have 18 Ancona pullets nine months old. In October they laid 357 eggs; in November 239. For the past two weeks I have not been able to make them eat. A good many go to roost with empty crops. They are running on green alfalfa, also have a dry mash before them all the time and a quart and a half of scratch feed at night and about a pint of scratch in the morning; also feed sprouted oats. Nothing I give seems to tempt them to eat. Will you kindly tell me what is wrong?—H. B. M.

Two quarts of scratch feed a day for 18 pullets is a pretty good allowance, especially for hens that are running on green range. If you will let them fast for a couple of days, giving only what they pick up on range, then let them have the dry mash again but cut down the scratch grain to a pint a day, you will find their appetites returning. Their egg record is splendid, but they have evidently had a little more feed than they need. The subscriber who sent the above question inclosed $1 with request to send Mrs. Koethen's "Poultry for Profit." The envelope with its post mark was destroyed before it was noticed that no post office address was given in letter. The book is wrapped ready for mailing as soon as subscriber sends his address.

Liver Trouble

I purchased from the California Cultivator your book "Poultry for Profit" which I have found very useful; however, I would like to have your advice regarding some sick chickens. I had one chicken die the other day. The comb was quite dark and upon opening I found quite a large liver which was spotted, and by referring to liver diseases on page 173 of your book I find, under symptoms "brownish yellow droppings," and by further investigation I find that some of my flock show quite soft droppings with yellow streaks, but the combs do not give any indication of sickness. I note that you recommend mixing dandelion tea in the mash. Will you kindly advise if the soft droppings with yellow streaks indicates liver disease and also please let me know what quantity of dandelion tea should be used, and whether an overdose will have a bad effect.—Subscriber, Oroville.

See answer to L. R. M. regarding spotted liver. I think you can buy dandelion in a little package similar to that in which catnip is sold. Make a tea with a pinch of it, as you would catnip tea, and mix with the dry mash, using about a pint of tea for a dozen hens. By a pint of tea I mean a pint of the liquid in which the pinch of dandelion is steeped. Your main dependence must be not upon medicine but upon diet. You do not mention the ration. If you are using the regular prepared laying mash it would be well to add about 50 per cent bran. Cut down the amount of scratch grain to a pint a day for a dozen hens and make them scratch for every bit of it. There is no medicine like green feed for a bad liver. Give the birds all you can induce them to eat. If you cut down the grain ration they will eat more green, and this is what they need.

STORRS EGG LAYING CONTEST

Storrs, Connecticut, December 1, 1919.—Report for the week ending November 28.

In the fourth week of the laying contest at Storrs, two Connecticut pens were in first and second place, two Massachusetts pens tied for third place and a Connecticut pen was fourth. The two pens of Leghorns entered by George Phillips from Seymour and Merrythought Farm from Columbia headed the list with 49 and 44 eggs respectively.

It was suggested that among other treatments for hens with colds the use of Epsom salts at the rate of one pound to one and a half pounds for each of the 100 hens was one of the best. In addition to this, however, the management of the contest is now using powdered sulphur. Like the salts, sulphur possesses the distinct advantage of being easy to administer to a large number of birds. The usual plan is to use the ordinary mash and add an amount of powdered sulphur equal to ten per cent of its weight; in other words, one should add ten pounds of sulphur to each 100 pound bag of mash. Feed this to the affected birds for four or five days and then go back to the regular rations which contain no sulphur. After a week or so resume the use of the sulphur mash for a second period of four or five days and then drop it again. Under this treatment hens with colds if they have been otherwise properly managed should show a decided improvement.

The three best pens in each of the principal varieties are as follows:

Plymouth Rocks

Merritt M. Clark (Barred), 87; Ingleside Farm (Barred), 75; S. Bradford Allyn (White), 74.

White Wyandottes

Merrythought Farm, 129; Herbert L. Warren, 102; Harry D. Simmons, 94.

Rhode Island Reds

Pinecrest Orchards, 177; Jacob E. Jansen, 122; Charles H. Lane, 120.

White Leghorns

Merrythought Farm, 151; George Phillips, 139; S. G. McLean, 123.

Miscellaneous

H. P. Cloyes (Buff Wyandottes), 134; A. L. Anderson (R. I. Whites), 118; W. H. Bassett, (Russian Orloffs), 38.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST

The California Farm Bureau egg laying contest gives out the following report for the week ending November 29:

Highest Pens for Week:

W. J. Neff, 69 eggs; C. K. Hale, 65 eggs; T. Stallings, 65 eggs.

Highest Pens for Week:

Warrren Wood 38 eggs; W. J. Neff, 34 eggs; S. L. Gibson, 33 eggs; C. K. Hale, 33 eggs.

Highest Individuals to Date:

D. B. Wells, Petaluma, hen 16, 11 eggs.

Highest Individuals for Week:

S. L. Gibson, hen 222, six eggs; S. L. Gibson, hen 332, six eggs; Hollis Peck, hen 272, six eggs; E. Crewdson, hen 322, six eggs; D. B. Walls, Petaluma, hen 16, six eggs; E. Crewdson, hen 378, six eggs.

All hens named are White Leghorns and all contestants here named, except Mr. Walls, are of Santa Cruz.

Report for week ending December 7, 1919:

Leading Pens to Date

W. J. Neff, Santa Cruz, White Leghorns, 111 eggs.

W. Wood, Santa Cruz, White Leghorns, 97 eggs.

C. K. Hale, Santa Cruz, White Leghorns, 91 eggs.

S. L. Gibson, Santa Cruz, White Leghorns, 91 eggs.

C. T. Brown, Santa Cruz, White Leghorns, 90 eggs.

Leading Individuals to Date

D. B. Walls, Petaluma, White Leghorn Hen No. 16, 17 eggs.

D. B. Walls, Petaluma, White Leghorn Hen No. 18, 16 eggs.

Leading Pens for Week

W. T. Neff, Santa Cruz, White Leghorns, 42 eggs.

D. B. Walls, Petaluma, White Leghorns, 34 eggs.

S. L. Gibson, Santa Cruz, White Leghorns, 32 eggs.

W. Wood, Santa Cruz, White Leghorns, 32 eggs.

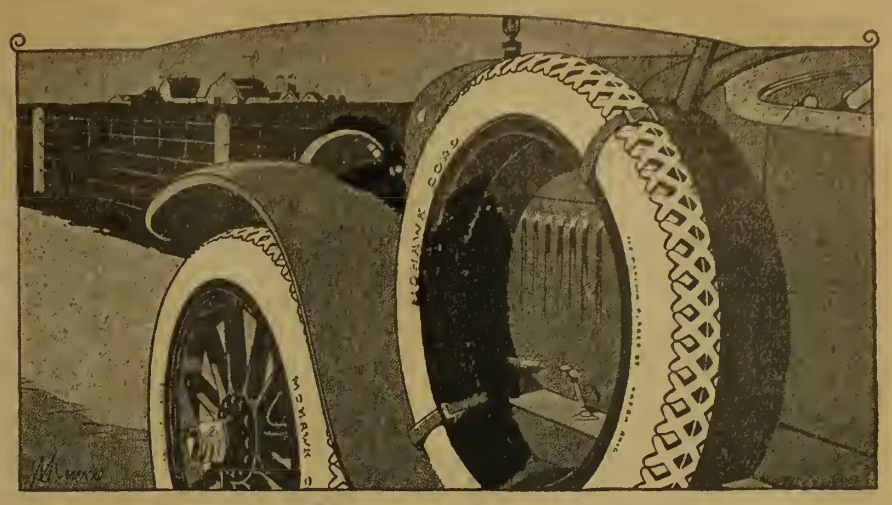
D. B. Walls, Petaluma, White Leghorn Hen No. 16, 6 eggs.

D. B. Walls, Petaluma, White Leghorn Hen No. 18, 6 eggs.

Bellow Bros., Lakeside, White Leghorn Hen No. 30, 6 eggs.

W. J. Neff, Santa Cruz, White Leghorn Hen No. 285, 6 eggs.

Chas. Lehman, Santa Cruz, White Leghorn Hen No. 363, 6 eggs.



Mohawk Is a Quality Tire Through and Through

A little quality in anything is better than no quality at all.

But quality clear through is best.

Mohawk tires do not provide you with quality just "here and there"—they are quality-built throughout.

The extra ply of fabric you find in most sizes of Mohawk Tires is one evidence of quality. The pure rubber used in Mohawks and the generous quantity of it is another.

The total absence of "fillers"—rosin, whiting, glue, shoddy, reclaimed rubber—is still another.

But not only are the materials in Mohawks quality materials—the building of them is based on quality, too.

Mohawk Tires are hand-made. They are made by veteran, expert tire builders. Machinery and less skilled workmanship would be less expensive—but would also lessen the quality and Mohawk builders will not lessen quality.

Eighty-five out of a hundred motorists who use Mohawks will buy no other make of tire. They know that Mohawk Tires are quality tires clear through—and consequently show no deterioration and give longer, more faithful service.

Plain or ribbed Cord or fabric Tires and an extra ply hand-made Ford size, too. Good dealers everywhere carry Mohawks.

Prevent Apalling Fire Losses

By Arthur W. Ford

PREVENTION and suppression of pasture land fires is a vital topic for stockmen now in view of the numerous devastating fires that swept over thousands of acres of valuable pasture land during recent summer months.

Yearly the fire menace grows greater as new roads and highways invite hundreds of people into the hills. Annually the spread of agriculture and other industries encroaches farther onto land formerly used for grazing purposes. No new ranges remain to be opened up in California, with the result that every acre of available pasture must be conserved.

With these conditions existing it is no wonder that stockmen are paying more heed to the problem of fire protection. Since loss of pasture increases the cost of producing beef and since any increase in the cost of production ultimately strikes the consumer the matter becomes one in which everyone is interested.

The first big forward step toward answering the problem was taken in California during the past summer. From a state appropriation for fire protection work State Forester G. M. Homans allotted $3 500 to meet a like allotment from the federal government under the Weeks law agreement. Under this agreement funds are spent on watershed areas tributary to navigable streams.

Only $3 500 was available to California this year from the federal government. Owing to the great extent of the state's watersheds the fund was entirely inadequate to permit of a fire protection program that would cover the entire area. Equipment for patrolmen, tools for fire fighters, automobiles for patrol work, salaries of patrolmen and pay for fire fighters, all had to come from the limited fund.

More than 3 000.000 acres, including all of the foothill land outside national forests in nine counties, Shasta, Tehama, Butte, Yuba, Nevada, Placer, Eldorado, Amador and Calaveras, were, however, put under protection. The area was divided into four districts and four patrolmen were appointed. Each district was far too large to permit the close observation necessary. In one instance a patrolman found himself with six fires raging in his district and a seventh threatening to jump a river and enter his territory.

In the nine counties above mentioned 116 fires occurred in the 82 days of the fire season that remained after the appointment of the fire patrolmen on July 25. The state appropriation, under which the work was carried on, did not become available until July 22 so that work could not be started earlier.

A total of 129,729 acres was burned over. Of this 119.229 acres, according to reports on file in the office of the state forester, are classed as strictly foothill pasture land. Winter range for thousands of head of stock was destroyed. Stockmen have been hard pressed to find additional range for their herds and several have been forced to sell out.

The above loss is for only nine of the state's 58 counties. Many of the fires in these nine counties were held to small areas by the timely arrival of patrolmen. Several would have swept from the boothills to the national forests had they not been controlled through systematic fire fighting.

One way stockmen and others can further the work of fire protection is by supporting measures that will extend and make more complete fire patrol work under the Weeks law agreement. At the present time only $3,500 is available to California from the federal government under the Weeks law. A bill now before congress, however, would appropriate $500.000 for fire protection work. Favorable action on this measure will make it possible for California by appropriating a like amount to obtain about $10,000 annually from the federal government. This amount would permit the extension of the fire patrol work in California to other watersheds as well as making it possible to decrease the size of districts under each patrol.

The apalling losses resulting from fires in every section of California during the past summer have brought home the fact to all that most rigid measures must be employed if fire losses are to be abated. Now is the time to make plans for the next and subsequent fire seasons.

"Old Tom" of Fort McDowell

Few servants of Uncle Sam have worked as faithfully for 20 years through rain and shine as Old Tom, the army mule. He is now retired; stands dozing in the sun, dreaming, perhaps, of the years when the shrill bugle called both men and mules to "tenshun!" This old fellow hauled the market wagon that supplied all quarters from the commissary at Fort McDowell, Angel Island, California. Not only did he recognize the importance of the bugle calls, but his own—at every house in the post.

It is a hilly place; roads wind back and forth from the small wharf where the tugs land to the top of the hill, perhaps three quarters of a mile. No driver was necessary with him. After the load was on, the driver went on about his business. Sometimes the soldiers would pile on a huge load just to watch the old mule. He would slowly lean into the collar to test it. If it did not feel about right, he would shake his head and refuse to budge until they had lightened the load. Perhaps this would require two or three trials before Tom would start up the long grade.

Early in his labors some kind-hearted sergeant gave Tom a loaf of bread. That settled it; he stopped for the loaf every day and begged till he got it. This was his first stop after leaving the dock, and the men soon learned to have that loaf at hand in the morning. After eating his loaf, the old fellow went on up the grade. When wanting a rest, he simply cramped the wagon so he would not have to hold it, nor could it run back.

Tom knew a well trained mule had no business in front of an officer's quarters, so went to the back door—always. When the bugle call came for rations, he made for the barn at once.

From Fort McDowell Uncle Sam's fighting men have gone out to all quarters of the globe, and thousands of them will still remember faithful old Tom. At present he is 30 years old, fat and dignified, but willing to make friends, provided one speaks to him with kindness.

Kindness has been showered on the faithful animal all his life, which accounts for his long record of active service. On the island he has many loyal friends and has been given many sobriquets, such as "King of the Island," "Old Veteran," and "Sage of the Post." He certainly has earned a place of recognition for services rendered, and will be long remembered by the men.—Our Dumb Animals.

THE PORT OF MANILA

Manila is provided with three medium sized piers, one of which is used exclusively by the United States army, but a fourth pier is now building, 240 feet in width by 1,000 feet in length, and a fifth pier is under consideration. More than 1,000 linear feet of wharf has been constructed, together with numerous marginal cargo sheds, and it is expected to treble the length of the wharf during the next year.

FREE PAPER TO ITALY

A royal decree issued late in October admits newsprint paper in rolls free from custom duties until January 1, 1920. This is done on account of high prices and shortage of raw materials. If present conditions are not speedily relieved, it is believed the free term will be extended.

"My but it's cozy here!"

Pearl Oil gives instant heat when and where needed. No smoke, no odor; without dust or dirt. Oil consumed only when heat is needed.

Pearl Oil is refined and re-refined; pure and clean burning. Sold in bulk or five-gallon cans. Order by name—Pearl Oil.

We recommend Perfection Oil Heaters.

THE MESSAGE OF THE BELLS

Ring, ring, O bells of Christmas-tide,
Your joyful messags far and wide.
Through all the land proclaim
This is the blessed Day of days
When here, to walk earth's troubled ways,
The Lord our Savior came!

O not with pomp and splendor fine,
But 'mongst the lowly sheep and kine,
And cradled in the straw,
He came, and low the path He trod
Always—the greatest gift from God
An erring world e'er saw.

As in the dawning eastern skies
The Wise Men watched the Star arise
That heralded His birth,
Thus we await God's Kingdom come,
When man and all God's creatures dumb
Shall dwell upon this earth.

In brotherhood; when war shall cease
And Love and Universal Peace—
Their banners white unfurled—
With tenderness and gentle sway,
Their watchword "Mercy," shall for aye
Prevail throughout the world!

Fling out your message, O ye bells,
Your cadence silvery foretells
The gracious times to be
When sweet Compassion, angel fair,
O'er this our land and everywhere
Shall brood perpetually!

—Louella C. Poole.

THE CHRISTMAS TREE

A modest tenant of the northland wood,
Undecked with flowers, unmarked by bud or bloom,
Through all the joyous summertime it stood,
A simple pattern from Dame Nature's loom.

Around it blossomed pink and purple things,
Gay figures in a wild embroidery,
Sweet honey-wells attracting whirring wings
That never paused to rest on modest tree.

Then came the chilling snows of winter-time,
The flowers that bloomed so gayly drooped and died.
The birds departed to a warmer clime,
'Mid other gardens gorgeous to abide.

But still the tree preserved its emerald,
More faithful than the transitory bloom,
And that which once no whirring bird enthralled
Was now the fairest object in the gloom.

Then came regard for all its faithfulness;
The tree that had no golden fruit or flower.
Transplanted with the children's soft caress,
Became the center of our gayest hour.

The Christmas Tree within a single night
Bore fruit more bountiful than all the rest;
With shining candles brilliantly alight
And silver stars a-glitter on its breast.

No proud young stalk such blossoms ever bore
As these that flowered on its branches now;
No plant or bush such glories ever wore
As these appearing on each spreading bough.

The modest tree, unnoticed and unseen,
Became the dearest treasure of the earth
To scatter joy from ev'ry sprig of green
And wake the soul to gladness and to mirth.

Everywhere, everywhere, Christmas tonight!
Christmas in lands of the fir tree and pine,
Christmas in lands of the palm tree and vine;
Christmas where snow-peaks stand solemn and white.
Christmas where corn-fields lie sunny and bright;
Everywhere, everywhere, Christmas tonight!

THE ALTERED CHRISTMAS

(Continued from last week.)

Gertie was completely carried away by the recital of this splendor. "Oh, my!" she gasped, "wasn't that just lovely. I wish I could have things like that! I wish—I wish your ma was alive now!"

"So do I!" echoed Laura.

Mrs. Stephens' heart gave a great throb of pain at this apostasy of her own children. What had she done that they should wish her dead? For so their words struck her Evidently they impressed Marie the same way.

Why, that's just the same as wishing your own mother was dead!" she cried in passionate tones. "You wicked girls! I think she's the very best woman that ever was born—that's what I think. She takes care of us all and don't hardly ever buy anything for hersef."

"I didn't mean it that way at all," wailed Gertie.

"Neither did I," sobbed Laura. She was a year older than her step-sister, but seemed much younger, and never more so than now.

"My mother meant to be good," went on the irate Marie; "hut I've heard Pa say that she hadn't any more judgment than a child. When she bought me the big doll I didn't have a warm dress, and when she bought me the bracelet I needed shoes and mittens. And after she died we had an awful time boarding. I guess my Pa and me appreciate your mother, if you don't. She always has good warm meals for us, and a clean house, and mended clothes. I love her if you don't, and I watch her all the time so that I can be like her when I grow up." Here the speaker, convinced by her own eloquence, wept unrestrainedly.

Mrs. Stephens, with tears in her eyes, stepped back in the sitting room, closing the door softly so that the children might never know that she had been eavesdropping. The sting of her own children's words had been momentary, for she understood their impulsive, affectionate natures too well to be deeply hurt by them. So Marie lover her! She had sat in judgment, but the verdict was favorable, and the stepmother knew that she could take the motherless one to her heart, as she had often longer to do, and that all would be right between them. Her heart was big enough to mother them all.

But the words of her own children had thrown a new light on her decision. Was she in danger of becoming too practical and penurious? Christmas seemed to the children the natural time of expressing love for each other, and she had no right to cheat them out of it. for down in her heart she was conscious of a tiny bit of cheating. She had more than enough for three payments on the house "put by" in the dresser drawer.

She put her shoes back on, and then her outdoor wraps. "After all, Christmas is Christmas," she reflected, and going into the bedroom quietly she unlocked the little upper drawer of the dresser and took a ten dollar bill from a worn old purse. It was hy rigid economy that she had saved this money for what she called her rainy day payment.

"Sweaters," she thought, as she hurried down the street; "red ones—that'll take the most of it. And then a pretty hanky apiece; they always need 'em. And then some candy and oranges, and a game that they can all play together in the evenings; and Marie wants a book—she can read it aloud. If I get three sweaters alike mebbe they'll throw off some. I'd like to get Hiram some slippers. It seems as though I ought to get him a present the first year we're married," and she smiled happily. "He's such a good man. I'm a pretty lucky woman."

"I'll use my next week's grocery money and get a chicken—we really can't afford a turkey—but I'll make it with dressing. and they won't know the difference."

She was fortunate enough to find what she wanted at prices to suit her purse. and two hours after she had stood in the stairway, she crept quietly into hed with a very satisfied feeling in her heart. In addition to her other purchases she had bought some little candles. for the grocer had given her some tinsel rope "to make the tree look pretty." That was the first she had thought of a tree. but she was glad he had spoken of it.

Long before davlight the next morning she aroused her husband. 'Hiram." she whispered. "I want you to go out and cut a little tree."

"Cut what!" he asked. hardly awake.

"A little evergreen a Christmas tree, for the children. you know. You can find something that will do back on the marsh." The Stephens lived just on the edge of the country town.

"All right," agreed Hiram. and made no comment.

When he returned she had a fire in the little-used parlor. and they fixed the tree in the farthest corner of the room. Then Mrs. Stephens brought out her array of presents and placed them to good advantage on the branches. Mr. Stephens went out to the woodshed and returned with a parcel.

"I staved overtime tonight to accommodate a man that wanted some work in a hurry—that's what made me late for supper. I charged him extra for it, so I bought these for the kids."

His wife gave a cry of pleasure as she opened the parcel. "Red caps! And see, they just match the sweaters. Won't they be pleased? Laura and Gertie have been teasing for both."

When everything was ready they closed the parlor door and called the children to breakfast. The father wondered that they seemed unusually quiet over their oatmeal, but the mother thought she knew the reason. Before they were quite through Mr. Stephens slipped into the parlor and lighted the tree, and then called them.

There were shrill cries of delight from the pleased children, and then, to the surprise of the parents, Marie turned and ran from the room, closely followed by the other two.

"Why, what's the matter?" asked the puzzled Hiram.

"I don't know," replied his wife, miserably. "Didn't they like it?"

But in an instant the three were back with shining faces. "We got things, too," fat little Gertie explained breathlessly. "We made 'em at school."

'Bless your hearts! Of course you wouldn't forget Pa and Ma."

Gertie had laboriously manufactured two holders, "one for Pa when he takes out the ashes, and the other for Ma when she bakes." Laura had evolved a blotter and a calendar, and Marie had hemmed a handkerchief for her father; but with money she had earned herself she had bought a silver thimble for her mother. In the box was a card that said, "I love you," and it was signed "Mary."

Lastly, or she supposed it was last, Mrs. Stephens gave her husband the slippers. He was pleased, with the pleasure that only comes to those who have not every wish gratified. Then he reached high up on the tree and took down a little sparkling thing that Mrs. Stephens had not noticed among the tinsel lodged there.

"Here's a ring," he said awkwardly. "I couldn't afford to buy it when we was married, but I want you to have it now. You do everything for the rest of us, and don't buy a thing for yourself. Let's all give her a kiss, children."

"Land sake! I must get that chicken in the oven!" expostulated his wife, to keep from showing emotion.

That night, at the end of their happy day, Laura and Gertie lingered a moment after Marie had gone to bed.

"Ma," said Laura, "I think that you are the very best woman that there is. You always have warm meals for us, and a clean house, and mended clothes. I love you."

"I think so, too." affirmed Gertie.

Mrs. Stephens smiled at the unconscious plagiarism, for she knew that the sentiment was their own.

"I never realized before." she said softly to Hiham, "that a person could be so busy working for their children and trying to get ahead in the world for their sakes that they almost forget to show that they love 'em."—Exch.

A HOLLY HUNT

Cut out of green paper large sized holly leaves, more than nine times as many as there are guests. On one side of each leaf either write, or paste, a label with a letter; making an equal number of letters with each of the letters in the word "Christmas," also marking twice the number with "S", of course. These leaves are then hidden (entirely or partially) in every conceivable place in the room in which the hunt is to take place. They can be pinned in the folds of draperies or on the under side of table or couch covers; they may peep out from behind pictures or from under the edge of rugs; or be hidden under bric-a-brac or under the covers of books. The guests then engage in the hunt, trying to find as many leaves as possible. The person who first gets among his leaves the nine letters with which to spell "Christmas" complete, wins the prize. If because of duplicates no one gets all of the required letters, award the prize to the one coming nearest to it.

CHRISTMAS

Christmas offers more opportunities to endear ourselves to those about us than all the rest of the year, and he who lets slip one such opportunity must surely live to regret it. This day should he so spent that through the year following it shall shine as a beacon from out the dull gray routine of our daily existence, lighting us on our way. It should be remembered as a time when new friendships were formed and old ones more firmly cemented. It should be memorable for the peace, charity, hospitallty and brotherly love that reigned supreme; memorable as a day when we enjoyed ourselves with the happy sincerity of youth and with the deeper, more lasting joy of later years.

A packit somebodie sent,
An' I'll bet naebodie kent
How awfu' glad an' gay
It made my Christmas day!

Sometimes it seems as if we were a bit selfish at the holiday season. All our love is poured out into the laps of those we love best. It is right to be thoughtful of our nearest and dearest, but let's try to have something flow over into the lives of those who may not have a very good time if we forget them.

If acts of love and kindness are generally done this Christmas season for those who need and don't expect them truly the spirit of giving will measure up to a cup full to running over of human kindness.

One cannot cut Christmas out of the calendar nor the spirit of the season out of the heart of the world.

Fir tree cones, gilded, make handsome Christmas tree ornaments.

NUT CANDIES FOR CHRISTMAS

Here are some fascinating recipes from the booklet of walnut recipes just issued by the California Walnut Growers Association. Read them, try them, then write to the California Walnut Growers Association, Los Angeles, for a copy. The recipes are collected by the principal of the Boston School of Cookery and include 100 recipes for bread, meat and vegetable dishes, salads, desserts, candies, etc.

Walnut Date Bars

Two eggs, one cup brown sugar, five tablespoons flour, one-half teaspoon baking powder, few grains salt, one cup chopped walnut meats, one cup dates.

Beat eggs until thick and lemon colored, add sugar gradually and beat, add flour mixed and sifted with baking powder and salt, chopped walnut meats and dates cut in small pieces. Spread in greased pan seven by ten inches and bake in a moderate oven. When cool cut in bars. Serves 20. Costs 57 cents.

Fruit Nut Caramels

One cup figs, one cup dates, two cup walnut meats.

Wash and stone the dates, wash figs. and remove stems, and put with the walnut meats through food chopper. Mix together thoroughly, and press firmly three-fourths inch thick into a small buttered pan. Cut in squares and wrap in wax paper or shape in small balls and roll in powdered sugar. Makes one and one-half pounds. Costs 94 cents.

Fudge Squares

One cup walnut meats, two squares chocolate, one-half cup butter, three eggs, one cup sugar. three-fourths cup bread flour, one-half teaspoon baking powder, one-half teaspoon vanilla.

Melt chocolate, add butter, stir until butter melts, and set aside. Beat eggs, adding gradually one cup sugar. Mix and sift bread flour with baking powder and salt. Add to eggs with walnut meats chopped fine and vanilla, then add chocolate mixture. Spread in shallow pans, bake about ten minutes and cut in squares while warm. Makes 25 squares. Costs 63 cents.

Nut Macaroons

White one egg, one cup brown sugar, one cup walnut meats, one-fourth teaspoon salt.

Beat white of egg until stiff and add sugar gradually while beating constantly. Fold in walnut meats, finely chopped and sprinkled with salt. Drop from tip of spoon, one inch apart, on a buttered and flowered sheet, and bake in a moderate oven until delicately browned. Makes 20 macaroons. Costs 33 cents.

Marguerites

One and one-half cups sugar, one-half cup water, five marshmallows, two egg whites, one-fourth teaspoon vanilla, one cup walnut meats, saltines.

Boil sugar and water until syrup will spin a thread. Remove to back of range and add marshmallows cut in pieces. Pour slowly, while beating constantly, onto stiffly-beaten egg whites; then add vanilla and walnut meats cut in pieces. Spread saltines with mixture and bake in a moderate oven until puffed and delicately browned. Serves 24. Costs 54 cents.

Chocolate Circles

One-half cup walnut meats, one-half cup figs, one-half cup almond paste, grated rind one orange, one-fourth teaspoon salt, two squares unsweetened chocolate, orange juice, sugar.

Put walnuts, figs and almond paste through food chopper, add orange rind, salt and enough orange juice to make mixture of consistency to handle. Knead on a board or marble slab sprinkled with sugar, cut in circles, brush with chocolate melted over hot water, and decorate with walnut meats broken in quarters. Serves 36. Costs 53 cents.

Chocolate Walnut Caramels

One cup sugar, one-half cup white corn syrup, one and one-half cups boiling water, one teaspoon vanilla, one-third cup powdered whole milk, three squares chocolate, one cup walnut meats.

Put sugar, corn syrup and water in saucepan, stir until sugar is dissolved, bring to boiling point, and boil until mixture will form a very firm ball when tried in cold water. The caramels when cold will be of the same consistency as this firm ball. Do not beat, as beating may cause the candy to become granular. Add vanilla, powdered milk sifted, chocolate grated and walnut meats cut in large pieces. Pour caramel into a buttered pan seven inches square. When cool cut in squares and if desired wrap in wax paper.

One and one-half cups cream may be used instead of boiling water and powdered milk. Makes one pound three ounces. Costs 39 cents.

Sugared Walnuts

One cup walnut meats, one cup sugar, one-half cup water, one-half teaspoon vanilla.

Put walnut meats in a saucepan and keep in warm place. Put sugar and water in another saucepan, stir until sugar is dissolved, and boil without stirring, until candy forms a soft ball when tried in cold water. Hold pan of walnuts several inches above the fire and shake vigorously while slowly pouring syrup over the nuts. Occasionally stir the nuts, then add remaining syrup drop by drop until all is used. Nuts should be evenly covered with a coating of sugar. If coating is not thick enough, more sugar and water may be boiled and added as before. Makes three-fourths pound of candy. Costs 32 cents.

HOUSEHOLD QUERIES

Lye Hominy

Will you kindly give me a recipe for making hominy in the old fashioned way with lye.—Subscriber, St. Helena.

To every gallon of corn take one tablespoon concentrated lye. Cover the corn with water. Boil slowly until the skin comes off easily and the dark tips on the grains begin to come out. Wash thoroughly. Let soak over night in cold water, drain, return to kettle and boil in plenty of water until tender. Put in a stone jar and set in a cold place and it will keep several days or it may be canned and kept as long as desired.

Or if you want to make your own lye with ashes: Take three cups hard wood ashes, two quarts cold water, two quarts dry corn. Put ashes in water and boil 30 minutes. Leave until the ashes settle to the bottom. Pour off the clear water which should feel slippery. Add corn to this water and boil until the hulls begin to come off. Drain and wash the corn in cold water, rubbing thoroughly with the hands to remove the hulls. Wash until there is no taste of the lye. Put into clear water and boil several hours until tender.

What do you get out of tea?

Taste and feeling. Common tea—you know how it tastes; and the tannin in it is bad for nerves and digestion. Good tea has the real tea-flavor: rich, delightful, exquisite. It is the cup that cheers.

Schilling Tea is the fine practical economical tea of this country.

There are four flavors of Schilling Tea—Japan, Ceylon-India, Oolong, English Breakfast. All one quality. In parchmyn-lined moisture-proof packages. At grocers everywhere.

DO YOU LIVE WITH YOUR FAMILY?

The Youth's Companion is published for those families who purpose to live together, work together, play together and read together. The editors believe that a united family means a united nation.

It is surprising how many stories—over 250—are printed in the 52 weekly issues. Every member of the family will enjoy reading Charles B. Hawes' serial, The Son of a "Gentleman Born," in 10 chapters, beginning in an early issue, and the eight other serial stories by Elsie Singmaster and others.

New subscribers for 1920 will receive:

1. The Youth's Companion—52 issues in 1920.
2. All remaining weekly 1919 issues.
3. The Companion Home Calendar for 1920.

All the above for $2.50.

4. McCall's Magazine for 1920, $1.00—the monthly fashion authority. Both publications for only $2.95.

HONEY

The local market is pretty well cleaned up of dark colored honeys. These have been taken by buyers at between 12 and 13 cents, largely for the bakery trade, which will not stand much higher prices than the current sugar quotations. The darker grades of Hawaiian honey are still arriving from the Islands, and are selling at between 10 and 12 cents. This is not the honey made from refuse of the sugar mills, which lacks that quality in flower-made honey, of holding moisture in cakes sweetened with it, and which bakers are shy of using at much lower prices than true honey. Holders of light colored honeys still look for this government to help out the European situation by financing sufficient credits to enable a freer buying of American products. The demand abroad for all kinds of foodstuffs is as urgent as ever, but with the franc quoted at 9½ cents, against a par of 20 cents, and the mark quoted at 2½ cents, as against a par value of nearly 24 cents our shippers are not able to carry this large deficit in foreign exchange. Our produce is therefore likely to remain in this country until Wall Street acts.

Jobbing prices: Extracted, Water White and White, 18@20 lb.; Light Amber, 16@18; Amber, 13@15; Comb, 25@ 28 for White and Water White and 23@ 25 Light Amber.

HOPS

1919 contracts per lb. around 75@90.

BEANS, PEAS

Jobbing price per cental:

Beans: Small white, 6.50@6.75; large white, 6.50@6.60; cranberry, 7.50@8.00; red Mexican, 7.00@7.25; pink, 6.35@6.50; California Bayou 9.25@9.75; Blackeye, 6.00@6.50; red kidney, 12.00@13.00; Lima 13.50@13.75; Garvanza, 9.50@10.50; Kotenashi (in bond), 5.35.

Dried Peas: California, 6.50@7.00 per cental for green, recleaned.

RICE

Prices per 100 lb. bag:

California: Fy., 10.50; ch., 10.25; flour, 6.25.

DRIED FRUITS

Prunes:

Prune prices announcel by the California Prune and Apricot Growers, Inc., were for the base prices, according to sizes, and are: 20-30s, 22c flat; 30-40s, 16c; 40-50s, 14c; 50-60s, 12c; 60-70s, 11½c; 70-80s, 11c; 80-90s, 11c; 90-100s, 11c. One cent a pound premium will be paid on fruit delivered before September 20. On small-sized fruit 8½ cents a pound will be paid for 100-120s and 7½ cents for 120s and smaller.

Peaches:

Peach prices announced by the California Peach Growers, Inc., for 1919 crop dried peaches for the domestic and foreign trade; September, October, November shipment, seller's option, guaranteed against our own decline until January 1, 1920, are as follows:

Standard yellows, 14¾c; Muirs, 15c.
Choice yellows, 15½c; Muirs, 15½c.
Fancy yellows, 16½c; Muirs, 17½c.
Extra fancy yellows, 17¾c; Muirs, 18¾c.
Slabs, yellows, 14½c.

For "practically peeled" add 1½c per pound (any grade).

Prices above are all bulk basis.

For packing in 50 pound or 25 kilo boxes add 1 cent per pound.

25 pound or 12½ kilo boxes, all 1¼c per pound.

10 pound boxes, add 2c per pound.

Blue ribbon peaches packed 2 pound cartons, 12 per case, $10 per case.

Blue ribbon peaches packed 2 pound cartons, 24 per case, $10 per case.

Bakers' special, "practically peeled," 16¾c per pound, bulk basis.

Apples:

Choice (in 50s), 20@20½; extra choice (in 50s), 21@21½; fancy (in 50s), 23@ 23½.

Figs:

White: Cooking (in 50s), 15@16; choice (in 50s), 17@18; extra choice (in 50s), 19 @20; fancy (in 50s), 21@22; extra fancy (in 50s), 23@24; bricks, 12 No. 10s, 1.60@ 1.67½; bricks, 24 No. 8s, 2.55@2.65; bricks, 50 No. 6s, 4.00@4.15; bricks, 70 No. 4s, 4.20 @4.35; layers, No. 10, 2.50@2.80. Calimyrna: Cooking (in 50s), 19; choice (in 50s), 23; extra choice (in 50s), 24; fancy (in 50s), 26; extra fancy (in 50s), 27½; bricks, 10 1-lb., 2.75; layers, No. 10, 2.95@ 3.20. Black: Standard 14, choice 17@18; extra choice, 18@19; fancy, 19@20.

Pears:

Standard 20, choice 22½; extra choice, 24; fancy, 26@27.

Raisins:

California Associated Raisin Company's prices guaranteed to January 1: Seeded: Sun-Maid, 16s, package, 15; fancy, 16s, package, 15; fancy, 12s, package, 11¾; choice, 16s, package, 14½; choice, 12s, package, 11⅜; bulk, fancy in 25s, 14¼; bulk, bakers, in 25s, 13½; bulk, Malagas and Feherzagos, in 25s, 13. Loose Muscatels: 4-crown, in 25s, 14¼; 3-crown, in 25s, 13¾; 2-crown, in 25s, 13¼; 1-crown recleaned, in 25s, 14. Seedless: Thompsons, 16s, 15½; Thompsons, 12s, 12⅛; Thompsons, bulk, recleaned, in 25s, 14½; Thompsons, bulk, bakers, in 25s, 15½. Bleached Thompsons: Choice, in 25s, sulfur, 18; fancy, in 25s, sulfur, 18½; extra fancy, in 25s, sulfur, 21; soda dipped, in 25s, 17¾; oil dipped, in 25s, 17¾. Sultanas, 16s, 15¼; Sultanas, bulk, in 25s, 14¼. Layers: 6-crown, flat pack, 20s, per box, 4.05; 6-crown, flat, 10s, per box, 2.20; 6-crown, flat pack, 5s, per box, 1.20; 4-crown, flat pack, 20s, per box, 3.20; 4-crown, flat pack, 10s, per box, 1.75; 4-crown, flat pack, 5s, per box, 1.00; 3-crown, tray pack, 20s, per box, 3.10; 3-crown, flat pack, 20s, per box, 2.95; 3-crown, flat pack, 10s, per box, 1.60; 3-crown, flat pack, 5s, per box, 95; clusters, 20-1s, cartons, 3.45; clusters, 12-2s, cartons, 3.80; clusters, 4-5s, cartons, 4.50; vineyard run, 100s, 13.00.

GRAIN

Wheat: The prices are based upon federal grades and standards at the terminals in San Francisco Bay and Los Angeles, and are as follows, per bushel of 60 pounds:

Hard White—	Per Bushel	Per Cental
No. 1	$2.20	$3.66 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.13	$3.63 1-3
No. 2	2 15	3 58 1-3
No. 3	2.11	3.51½
Club and Sonora—		
No. 1	$2.16	$3.00
No. 2	2.13	3.55
No. 3	2.09	3.48½

The above are minimum prices.

For sacked grain add 4½ cents per bushel of 60 pounds to above prices. Deductions of three-fourths of a pound made for weight of standard grain bags. Wheat grading under No. 3 mixed or smutty wheat will be purchased according to merit.

Oats: Red feed, 3.05@3.10; black, 3.15 @3.25.

Corn: California yellow, 3.00@3.10 per cental: Egyptian, 3.50@3.60; milo maize, 3.20@3.30.

Rye: 3.30@3.40.

Barley: Spot feed, per cental, 3.42½@ 3.45; brewing, 3.55@3.60.

HAY

Under date of December 13, Scott-Magner & Miller says:

Receipts past week, 1,327 tons. The car situation continues to be a main factor in the market. Trade in the city is very dull, while the demand from country districts is quite active. It is hard to take advantage of this country demand owing to the scarcity of cars at all loading points; this includes San Francisco as well as every other point. It often times takes several weeks to obtain cars at specific points for special shipment.

The recent rains have been most beneficial in all districts putting the ground in best possible shape for plowing where not already plowed and starting the seed in the land which was dry plowed. Grass starting on the ranges and with favorable weather may relieve the stock situation. The market is firm on all grades.

considerable alfalfa is moving from Nevada this way at the present time.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market — for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions:

Fancy Wheat Hay (light 5 wire bales) .....24.00@26.00
No. 1 Wheat or Wheat and Oat Hay .....21.00@25.00
No. 2 Wheat or Wheat and Oat Hay .....20.00@22.00
Choice Tame Oat Hay.....23.00@26.00
Other Tame Oat Hay.....20.00@23.00
Wild Oat Hay .....19.00@22.00
Barley Hay .....19.00@23.00
Alfalfa Hay .....21.00@26.00
Stock Hay .....16.00@19.00
No. 1 Barley Straw, bale..... .50@ .80

Citrus Markets

Los Angeles, December 17, 1919.

Navels are beginning shipping south of the Tehachapi but very cautiously. Central California shipments of Navels ran as high as 285 cars in one day. The usual total from that section is around 100. Northern California, including Butte, Sacramento and other counties, has now shipped out a total of 226 cars of Navels. The extreme cold weather of the East has prevented unloading some fruits but there has been no serious piling up of cars on sidings because the rains of last week prevented picking at an opportune time. Experts are still busy estimating damage from the electrical storm. The damage is more serious than first estimates indicated.

Lemons are in a bad way. Immense numbers of foreigns are coming and the extreme cold has lessened the demand.

Shipments

Shipment of oranges from Southern California to date since November 1, 1919: Oranges, 2,782 cars; lemons, 505; total, 3,287. To same date last season: Oranges, 660; lemons, 869; total, 1,529. Central California: Oranges, 3,003; lemons, 87; total, 3,090. To same date last season: Oranges, 2,295; lemons, 184; total, 2,479. Northern California: Oranges, 226; lemons, 15; total, 241. To same date last season: Oranges, 166.

MARKET NOTES

H. A. Marks, U. S. D. A. market specialist in Florida, reports regarding cabbage conditions in Florida:

"With planting of cabbage still continuing throughout the producing sections an accurate estimate is still impossible, but from present indications the acreage of commercial cabbage will be between 8,000 and 9,000 acres for the coming year, probably closer to 8,000, compared with an acreage of about 4,000 for the past season."

Department crop estimate men report for cabbage in Texas:

"A few growers are reporting rot which they claim due to cloudy, wet weather. No general movement expected until after February 15, with peak the latter part of March. Total planting 15,725 acres, as compared with 4,430 acres harvested in 1918-19."

Specialist Stillwell of crop estimates reports as to cabbage conditions in Imperial:

"Estimated commercial acreage season 1919-20, by shipping points, follows: Brawley, 190; Heber, 80; Poppy, 25; total, 295. The stand and yield are poor."

There are 181 sour cabbage or crout factories in the United States which used last year 30,774 tons of cabbage. The largest acreage devoted to crout is in Michigan which grows over 1,000 acres. The average yield the country over for 1919 was 6.7 tons per acre. The 1918 production was far greater, aggregating 86,239 tons, used by 157 cutters. Cabbage grown in California and the Southwest is almost exclusively sent to winter markets. This section is not in the crout class.

As to cauliflower in Los Angeles district, E. W. Stillwell, specialist, reports: "Recent rains followed by warm weather will hasten maturity. Supplies should be heavier next week. Variable weather has slightly affected quality, tending somewhat to make looser heads for recent shipping."

Lettuce plantings continue in Texas. State will plant 1,300 acres compared to 557 in 1919. Shipments in bushel hampers will not be in full swing till February.

Stillwell reports lettuce conditions in Imperial Valley: "The following estimates of acreage for season 1919-20, by shipping points, are based upon reports from distributors showing prospective, contracted or controlled acreage and upon estimates of independent acreages. Many distributors figure approximations only on account of contracts with growers still unsigned, but figures are quite accurate. Brawley, 332; Heber, 1,620; Calexico, 1,745; Westmoreland, 870; Poppy, 700; Imperial, 413; Kimura, 250; Seeley, 250; Calipatria, 140; Grape, 140; Rockwood, 70; total, 6,530, as compared with 2,650 for season 1918-19. It is difficult to obtain accurate estimates of the average yield on account of new growers and new soil. These factors generally appear to have reduced the yield although weather has been favorable. The average stand is estimated at 70 per cent. Cooperative estimates place the yield of commercial stock available for shipment at 150 crates averaging six dozen heads each per acre, or total 4,328 cars, 330 crates each. Shipments are not expected to reach this figure. Relation between estimated acreage and cariot shipments the past three seasons shows for each season approximately two-fifths cars per acre. Upon this basis shipments will total 3,800 cars. Serious shook and nail shortage and possibility of hot weather in April may stop shipments before crop is harvested, and local authorities believe 3,500 cars probably will move. The shipping season is longer than usual starting about Christmas and continuing to late April. January movement will probably be 500 cars, with peak first part of March. Los Angeles district: Damage by frost ten days ago apparently is limited to freezing out leaves and tops of leaves. In some sections such damage is negligible. It is doubtful if carrying quality is injured, but poor appearance will lower selling value. Recent rains slowed up cutting slightly, but benefited crop. Supplies for shipment increasing, but heavy demand still causing cutting of immature stock."

The Imperial Valley will ship 85 cars of peas.

Spinach shipping from Imperial begins today, December 20. The valley has about 1,200 acres and will ship about 800 cars of 330 crates each. Some of the better fields will run a car to the acre.

Beginning about January 1, 1920, "The Market Reporter," a periodical of general interest devoted to marketing information concerning important agricultural products, will be published weekly by the bureau of markets. It will be sent free to those interested who make request to "Bureau of Markets, U. S. Department of Agriculture, Washington, D. C."

Celery in Florida: Early plantings nearly over. Acreage as usual will be increased by plantings of late celery. The color is good and the growth has been remarkable during the past three weeks. The stand is fairly good and plants are less uneven than earlier in the season, but at the present time the average condition is probably about 70 per cent, with prospects of a yield of about 500 crates per acre. Most shipments this season will be in the ten inch crate.

Celery in Southern California: Rains have made it impossible to harvest celery but have helped late crop. Shipments from El Monte should start again in a few days. Central section: Frost ten days ago nipped tops, causing discoloration both in Antioch and Walnut Grove districts. In a few spots where the frost was especially heavy the carrying quality is probably injured. Rains practically stopped shipments the last few days. Movement is expected to be normal again Monday. With favorable weather shipments from Walnut Grove should be 12 to 14 cars per day the next ten days.

PAMPAS GRASS

The commercial use of pampas grass in California began in 1872, when the late Joseph Sexton of Goleta, Santa Barbara County, planted seeds, raised young plants and set out a block for plumes. In 1874 samples of the female plumes were sent to New York and at once became popular and in strong demand. The early prices were as high as $200 a thousand but of late years $10 a thousand is the ruling price.

But all this is about commercial pampas grass whereas it is beautiful as a garden ornament. Not only do we have the common species, but dwarf ones and one with striped leaves and pink and lavender plumes. While the grass is almost a bog plant it will grow in very dry situations, and there is no garden soil in which it does not thrive. Of late years the common species has been left to parks and large gardens because of its great size, but the smaller and colored plume varieties are very popular.

RUST RESISTANT ASPARAGUS

The Washington family of rust resistant asparagus, developed by the United States department of agriculture in cooperation with the Massachusetts agricultural experiment station and other cooperators throughout the country as the result of 13 years of effort, is now well disseminated among interested growers and seedsmen, some of whom have available stocks of the new strains for sale. The pedigreed stock thus far distributed to growers is intended to form a basic stock for further breeding work. The department of agriculture announces that while it will continue to distribute the new strains, private enterprise must be looked to henceforth to furnish the general trade with its main supply of seeds and roots.

FILIPINO ADVANCE

The Philippine legislature, composed entirely of Filipinos, recently voted 30,000,000 pesos to extend the educational system so that school will be available to every child in the islands. The government now supports 4,700 schools, with 12,303 teachers. The number of children attending shows a gain of 54 per cent in the past six years. All instruction is in English and will continue to be, even though independence is secured. A large number of additional American teachers will be employed and sent to the Philippines during the next year. The total expense of education is paid by the Philippine government.

SOME LETTUCE

It is a matter of record that a New York buyer who ordered a car of California lettuce opened it and wired back: "I ordered lettuce, received cabbage." On being assured that it was lettuce he re-examined it and was astounded as well as overjoyed to find such firm, gigantic heads. He even then doubted if the public desired such large sizes, but now California lettuce commands the highest price wherever it is offered on the market.

BOLIVIA BREAD

The United States ships to Bolivia nearly two-thirds of all her wheat flour, twice the amount imported from its neighbor, Chili. Bolivia grows little wheat and has no flour mills. Ordinary bread is made in the same manner as in the United States, but the cheaper grades are made with an admixture of corn flour.

COCONUT PRICES

Five years ago the export price of coconuts at Colon, Panama, was $20 to $22.50 a thousand. Now the price ranges from $60 to $75 a thousand, the highest prices ever known. For three months previous to September 30, the coconuts invoiced for export to the United States amounted to $5,850,913, valued at $393,932. The high present price has much stimulated the export business.

ADVERTISING IN SPAIN

Copies of the review Messidor, Barcelona, Spain, claimed to have a circulation of 5,000 copies, has been received at Washington, D. C., with a request for American advertising. The rates are based on 35 pesetas a page. A copy of the magazine is filed with the bureau of foreign and domestic commerce as No. 20941. No castles in Spain are advertised.

CEMENT TILE FOR ALKALI

After an interruption of two years the government officials have again taken up the investigation of cement tile drains for alkaline soils. In Minnesota tiles buried two years ago were found uninjured by alkali or acids. The results to date have been published in a bulletin entitled: "Durability of Cement Tile in Alkali Soil."

EXPORTS TO NETHERLANDS

During the first six months of 1919 the United States supplied the Netherlands with 99.3 per cent of the barley imported, 71 per cent of the oats, 94 per cent of the buckwheat, all of the rye (grain), 84.9 per cent of the wheat flour, 99.3 per cent of the petroleum, 67.8 per cent of the lubricating oils and much of the lesser importations of food stuffs.

AMERICAN MOTOR CARS IN INDIA

The returns of the foreign sea-borne trade of India for July throws interesting light on the hold obtained by American motor car manufacturers on the Indian market. During the month 772 cars were imported, 750 of them being from the United States, valued at $632,645.

TO KEEP CABBAGE FROM BURSTING

Cabbage will often all get ready to use at the same time and if not used then may burst. A. F. Yeager of the North Dakota agricultural college states that this can be prevented by waiting until the heads become solid, then pull up on the plant until it starts to give. This breaks many of the roots and will supply only enough moisture to keep the heads in good condition.

SHE WAS TRUE TO HIM

"Now, I wonder," thought Alphonso, the new husband, who was a commercial traveler and away from home, "what Arabella is doing this precise moment. I wonder," he repeated, "what she is doing."

Then a brilliant idea struck him and he visited the nearest spiritualist medium.

"What," said Alphonso, for the third time, "is Arabella doing?"

"She is looking out of the window," replied the medium, "evidently expecting somebody."

"That is strange," said Alphonso. "Whom can she expect?"

"Ah!" continued the medium, "some one enters the house and she caresses him fondly."

"It can't be!" cried the excited husband. "My wife is true to me."

"Now she lays his head on her lap and looks tenderly into his eyes."

"Nonsense!" roared the jealous husband.

"Now she kisses him."

"It's false!" yelled Alphonso.

The medium saw that he had gone far enough.

"Now," he said, "he wags his tail."

Lincoln said: "The value of life is to improve one's condition." Saving is the foundation of advancement. Buy W. S. S.

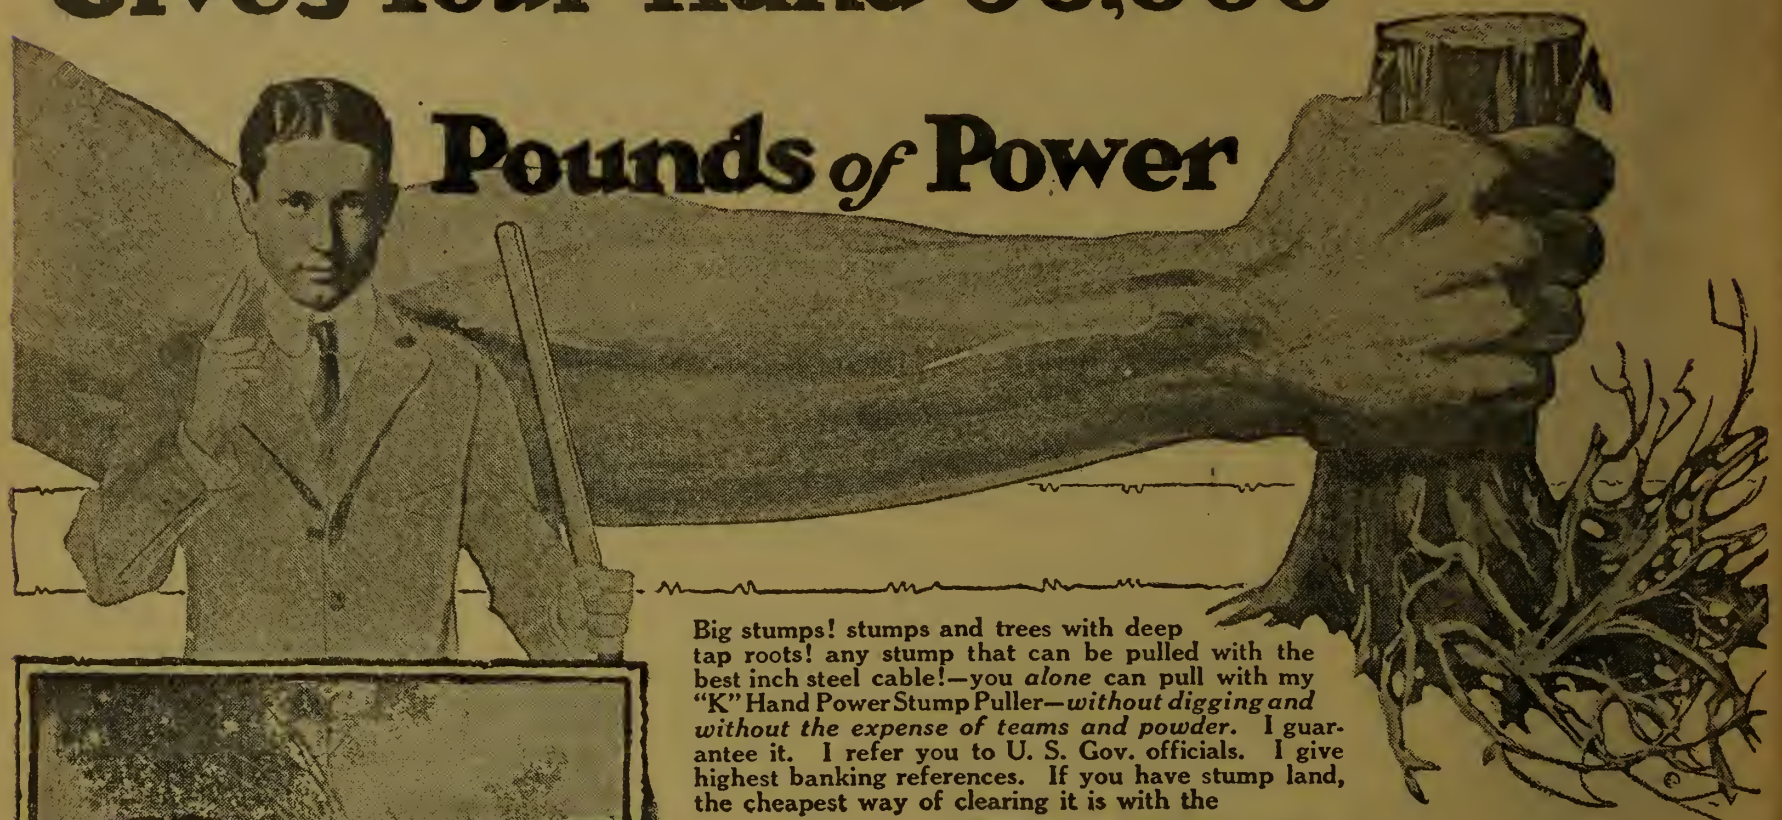
My K Hand Stump Puller

Gives Your Hand 96,000 Pounds of Power



Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER

K Stump Puller

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not* work

Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

Special Offer We are making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write us today for full information and for free book on Land Clearing and about our Wonderful Drag Saw.

A Beautiful Sight---A Productive Orchard---Walnuts

California now has 65,000 acres of walnut orchards. She will plant this coming year approximately 5,000 more. The quality of California grown walnuts has given them entrance to the best markets and a gradually increasing return to the grower has encouraged larger planting. It is estimated that this year's planting would be doubled if trees could be had. This year's return to the State for its walnut crop will reach $20,000,000.

"and it is manufactured especially for California"

Allwork II

That is why the Allwork The Second is so wholly satisfactory and in so short a time its sales exceed that of any similarly priced tractor

¶ Of course you know the Allwork II must have been accepted as a great success because it was designed to meet California conditions.

¶ Knowing the severe conditions a tractor must combat to be successful in California, you will agree that two of the most essential things are **plenty of reserve power** and **the complete** enclosure and protection from dirt of all working parts.

¶ An absolutely dust-proof construction is carried throughout the Allwork II and all gears and other working parts are run in oil.

¶ The same powerful, heavy duty, five bearing crank shaft engine is used that has made the Allwork tractor so famous during the past ten years.

¶ There is power enough to pull three bottoms anywhere without strain or overload and strength, and therefore durability throughout the balance of the machine which the lighter tractors of equal or greater rating do not have.

¶ And still with all of this power and strength the Allwork II is only fifty inches wide, fifty-five inches high, has a seventy-five inch wheelbase and turns in a nine foot radius.

Never before has so Much Power Been Built into such a Small Tractor

Perfect Traction in all soil without the effect of Packing

All Working Parts Completely Enclosed and Running in Oil.

Timpken Bearings Throughout Transmission	4¾x6—4 Cylinder Engine
14-18 Horse Power	900 R. P. M.

The Outlook for the Pacific Coast Farmer

Cultivator Readers Review Past Year's Industry and Have High Hopes of the Future

NEVER before has the farmer been confronted with so serious a problem as at present. Never has he asked so seriously, "What of the future?" We have all looked to history for that ever-helpful precedent, but in this case it seems impossible to find. After the Civil War conditions somewhat similar to the present confronted this country. These conditions were gradually changed until normal prices and normal transactions returned. This required some 13 or 14 years and was so gradual that no serious jar resulted. Our more careful thinkers are giving much encouragement, so we have gone to them and asked the questions which the farmer is asking of us.

So far as the past year is concerned and so far as food production during the strenuous days of the war is concerned the California farmer suffered from shortage of labor, yet produced more than ever before. Conditions are somewhat different, the labor shortage remains, yet our production has increased and we believe will continue to increase during the next 12 months. As may be seen from the estimates given in the following pages, these products will be absorbed in a way which will be entirely satisfactory to the producer. It is only a few years since the top production of the entire United States reached the ten billion dollar mark. Last year's production, including livestock, aggregated in excess of 25 billions. California's part in this was great, for its farm products alone exceeded in value one billion dollars.

One little section of the state, the Imperial Valley, which less than a score of years ago was unproductive desert, during the past year sent out over 500 trainloads of lettuce, onions, spinach, peas and other truck crops. The citrus growers of the state sent to market well towards $100,000,000 worth of citrus fruits and citrus fruit products. Of apples the state has produced this year well up to 1,300,000 boxes; of pears, 5,000,000 bushels, this according to figures given out by the United States division of crop estimates. Of walnuts there was never such a crop and it will bring $20,000,000 to the state. Then there are almonds, cherries, figs, olives, small fruits, sweet potatoes, onions, corn, sorghum grains and a number of other products which will bring around $100,000,000. Apricots, peaches, prunes, raisins and grapes aggregate well up towards $100,000,000. Then there is $100,000,000 in vegetables, cantaloupes, sugar beets, potatoes and beans. The bean growers have been disappointed over the market situation; closer cooperative methods of marketing are now being used and another year will presumably bring more satisfactory results. Two of our newest crops, rice and cotton, will aggregate far above $50,000,000. Alfalfa and grain hay have produced stock feeds to the value of more than $100,000,000. Still we have not mentioned many of our crops nor animal husbandry which is increasing in importance with a rapidity equal to that of the others mentioned.

These figures give only a slight indication of the prosperity of agriculture in general in California and on the Coast. The individual farmer may well respond: "This looks well for the state; what are my prospects for the next year?" No one has the answer, but there is many an excellent suggestion in the letters which have been received by the California Cultivator from a number who have been asked for their best word for 1919 for the California farmer.

The first letter is from J. P. Riggs, assistant secretary to Secretary Houston of the United States department of agriculture.

A BRIGHT FUTURE

By J. P. Riggs, Assistant Secretary United States Department of Agriculture.

TO me it seems that the path of American agriculture lies straight ahead. There are hills to climb and gullies to cross, but the course is straight and the sun shines all the way. All we have to do is to keep our faces to the front, and, as the expression goes, follow our noses. Thus we shall pass by the crossroad that leads to backwardism and the other one that goes to radicalism. Neither of these "isms" will lead us away from progress and patriotism.

Agriculture is America's greatest and basic industry, and the people of this country as a whole now realize it more than ever before. The splendid response that American farmers made to the necessities of war time emphasized the dignity as well as the importance of their calling. We can build uopn this foundation by doing our duty, by producing food in abundance for the people. That should be an easy and a logical duty, for there is no present indication that good markets and fair returns will be lacking.

Forces are at work everywhere to make farming more stable and more profitable. Steps are being urged and are being taken to eliminate the evils that still exist and to improve the facilities that have been provided. We look forward to additional legislation for the protection of farmers in their buying of feed and fertilizers; to extension of governmental aid in marketing so as to enable them to sell at retail and buy at wholesale; to personal credit unions that will make it less difficult for farmers to obtain financial accommodations; to better rural schools, improved sanitary conditions and medical facilities in rural districts, and to many other developments and accomplishments, some under state laws and some under federal laws, and some requiring state and federal cooperation, that will make country life and country work fully worthy of itself.

The wonderful state of California, whose very name is a symbol of plenty and whose crops are as notable for their variety as for their abundance, has an agricultural future as bright as the evening sun in the Golden Gate. It deserves and undoubtedly will get its full share of the beneficial developments that lie ahead.

THE OUTLOOK FOR THE FARMER

By Stoddard Jess, President First National Bank of Los Angeles

IN reply to your question as to the outlook for the farmer during the coming year, I would say that notwithstanding the great uncertainties that exist throughout the civilized world as the result of the war, in my opinion our farmers will not only be justified but will be acting wisely to bend every effort to produce food products and raw material during the coming year.

While we know that the present prices are abnormal and must eventually approach normal again, no man is wise enough to foretell the time when normal prices will be realized. Hordes of people in Europe are suffering from the lack of food and many will starve to death during the coming winter. The world's supply of food products is short. The high prices during the past two years have largely been the result of the workings of the law of supply and demand. With the many millions of young men engaged in the war, who ceased to produce and became consumers, and the other millions at home whose activities were diverted from useful occupations to the manufacture of munitions and supplies for the use of the army, it is not to be wondered at that the world's supply of food products became exhausted and prices were forced to exorbitant figures. With the restlessness still continuing in European countries, many years must elapse before they produce as they did before the war.

While the farmer should expect a lower range of prices next year, he can with reason expect prices to continue above normal for some years to come, for it will take some years to fill up the world's storehouses that were depleted during the war. Farmers should continue to speed up production, both because it will be profitable for them to do so and because it will be helpful to humanity.

THE FARMER A BUSINESS MAN

By W. H. Joyce, President Federal Land Bank of Berkeley

Going on the general principle that the more the farmer raises the more he will have to sell, I would say that every farmer should make the same arrangements toward perfecting his equipment, securing seed and properly financing himself as he would in any other year.

A farmer is a business man and as such must continually make provisions for the future just the same as any other business man would do. We should all go right ahead on the even tenor of our way doing whatever seems best to us and leaving the future in the "lap of the gods." There is no more reason why a farmer should ask himself what prices he is going to receive for his coming crop than that he should ask himself what the weather is going to be in the future. Man proposes and God disposes, but if man refused to propose and act upon his proposition simply because he did not know how God would dispose, it would indeed be a sorry world.

This is not time to "weary in well-doing." The world is still short of food and staple commodities, and regardless of what prices he might receive, the fact still remains that the more one produces the more he will have to sell. It is extremely unlikely that the cost of his products will exceed the prices he will get for them.

* * *

J. W. Garthwaite, Oakland Bank of Savings, writes of busy times preventing review requested of him, with hopeful expression for the future.

THE PAST YEAR AND THE OUTLOOK

By R. H. Taylor, State Department of Agriculture

THE past year for the California farmer has unquestionably been one of the most problematical he has had to face for a long time, not from the standpoint of returns for his products, because they have been generally high, but from the uncertainties incident to the continuation of his business. Costs have been excessive and production has been precarious.

First, the close of the war left the farmer uncertain concerning the prospects for the new year's crops. No one was sure what effect the shutting down of war industries would have on prices generally. Prices were soaring with no prospect of relief. Supplies incident to the conduct of his business were difficult to secure and when finally obtained were generally of inferior quality. His own living expenses kept increasing.

Labor conditions went from bad to worse. High wages in the cities attracted most of the desirable labor and that left in many cases became more and more unreliable. The shifting labor demanded higher pay and shorter hours, cutting down the possibility of production by the shorter hours and in addition did less in proportion to the time than when the hours were longer. Then, with a greater amount of money in hand after a shorter period of work, such labor took vacations without warning right in the middle of the busy season, especially in harvest, leaving the producer to shift for himself, unable to find the help or to do it himself. The result was a considerable crop loss in many instances, which in the aggregate has been very great.

The uncertainty and unreliability of much of the available labor prevented the cropping of thousands of acres which would otherwise have been producing.

Another major difficulty preventing maximum production has been lack of adequate transportation facilities. This has been especially serious with the perishable products, as most fruits and vegetables.

Lack of sufficient rainfall during the last winter and spring has further prevented maximum production where irrigation was not available in ample quantities.

In spite of these handicaps the California farmer has been producing to the limit of his ability and yet the cry is for more. There is nothing that will bring down the high cost of living like increased production, not only on the part of the farmer, but by everyone. The answer to the high cost of shoes is more shoes, to the high cost of clothes is more clothes, and to the high cost of food is more food. The answer to the laborer who wants cheaper food is to produce more food by his labor. This is so simple as to be axiomatic, yet labor as a whole does not comprehend it.

The California farmer has accomplished wonders in spite of the manifold difficulties. Chief among these accomplishments has been his effective method of cooperation. There has been a long and loud cry against the profiteers. The farmer through his cooperative methods of marketing has done more to stabilize markets, reduce

Continued on Page 854.

Agricultural News Notes of the Pacific Coast

Northern California

Yolo County grew 30,000 tons of sugar beets this year.

Colusa has voted $20,000 in bonds for building a swimming pool.

Gridley, Butte County, is to have a $335,000 cannery on a 13 acre site.

The largest can factory in the state is the one recently completed at Oakland.

The ice crop of the Feather River in Plumas County is now being harvested.

The cherry growers of Santa Clara County have organized to get better prices.

A new dried milk plant will be built at Point Reyes Station, Marin County.

Oroville, Butte County, lays claim to shipping the first 1919 olives to Eastern markets.

Mountain lions are becoming a serious menace about Nevada City, Nevada County.

A new barrel manufactory has just been completed at Winehaven, Contra Costa County.

Contra Costa County officials say the last season's rodent war saved the county $83,722.25.

Rice at Colusa has reached $6.71 per hundred and is expected to reach $7 in the near future.

The pear acreage of Butte County will be heavily increased during the present planting season.

Alameda County is to have the largest woolen mill west of New England, to employ 1,000 persons.

A movement is on foot at Benicia, Solano County, to drain and fill the swamps for factory sites.

Hop growers in northern counties announce prohibition will force them to grow other crops in 1920.

Reports from Butte County show that the orange crop will be much larger than that of last year.

Shasta County's fair at Anderson was such a success that a permanent fair association has been formed.

The Sperry rice mill just completed at Chico, Butte County, is the most northern one in the United States.

Ranchers in Northern California want more stringent laws to govern fruit and nut thefts by auto parties.

The tobacco growers of the Sacramento Valley will erect a large tobacco factory, site not yet determined.

In Butte County the Gridley district chamber of commerce organized with 260 members, half of whom are farmers.

A black silver fox farm has been established in El Dorado County; three pairs of breeders cost $2,600 a pair.

Rains have been so heavy about Redding, Shasta County, that trains and traffic have been seriously delayed.

The California Bean Growers Association has opened a district office at Sacramento to wage a campaign for membership.

Nearly 100 horticulturists and orchardists are enrolled in the horticultural short course at the Davis university farm.

In Butte County the horticultural commissioner estimates 2,400 orange trees have been killed by mice girdling the trunk.

Central California

San Jose has 38 canneries.

Last year 1,800 acres of prunes were planted in Tulare County.

Clovis, Fresno County, ships five cars of raisins per day to England.

Orange shipments from Lindsay will total 1,300 cars for the present season.

Lindsay, Tulare County, reports its season's citrus shipment will total 1,500 cars.

Tulare County growers of pomegranates netted five cents a pound on Eastern shipments.

A Watsonville apple shipper was last week fined $150 for sending out defective apples.

Hollister, San Benito County, reports no more rain at present is needed in that district.

Porterville, Tulare County, navels have been selling in Eastern markets for $4 to $4.50 a box.

Modesto, Stanislaus County, has voted $289,000 in bonds to be used in municipal improvements.

Bishop, Inyo County, is seeking to have Red Rock canyon near that city declared a national park.

The top price at the last Modesto, Stanislaus County, sale was $13.75 a hundred for a carload of hogs.

The Selma, Fresno County, cannery had a short tomato run by reason of crop failure and early frosts.

The El Pescadero ranch of 13,000 acres, near Tracy, changed hands recently at a price of $1,435,000.

Fresno County produced 3,145,545 pounds of butter and 451,163 pounds of cheese during the past year.

Livingston, Merced County, this year shipped 323 cars of grapes as compared with 244 cars in 1918.

Six Hanford, Tulare County, school boys planted a quarter acre each of sorghum and each cleared $30.65.

The Terra Bella, Tulare County, cannery has just finished packing more than 27,000 cans of tomatoes.

The fig growers about Dinuba, Tulare County, are back of a movement to erect a cannery for that district.

The last farm bureau hog sale at Tulare was 488 hogs that ranged in price from $12.55 a hundred to $14.60.

The winery at Clovis, Fresno County, is being dismantled to be shipped to Buenos Aires, South America.

The Merced-Stanislaus Sweet Potato Growers Association, recently incorporated, is getting $3.50 a hundred for cellar sweets.

Seventy acres of rich Tuolumne River bottom land near Turlock, Stanislaus County, sold for $1,000 an acre without a crop of any kind.

The Tulare County Cooperative Poultry Association reports November as the biggest month for business and prices the highest ever known.

The Fresno County board of supervisors has approved the electrification of artesian wells on the James ranch in order to develop 27,000 acres of land.

A Japanese, with wife and three children, stepped off the train at Porterville last week and was induced by the police to purchase a ticket to another town and hustled aboard the first train

Southern California

There are 603,841 acres under the Imperial irrigation district.

Ventura County has decided to erect a war memorial building.

A new cement plant is being built at Whitewater, Riverside County.

Orange County's 1919 walnut crop is valued at more than $5,000,000.

A large fish cannery is being built at Newport Beach, Orange County.

A vigorous campaign is on now to rid the Palo Verde Valley of Johnson grass.

A Yucaipa apple shipper is to make a test case in the apple standardization law.

The Irvine Walnut Association of Orange County this year shipped 865 tons of nuts.

The American Fruit Growers is building a warehouse at Anaheim 60 by 300 feet.

The Victor Valley, San Bernardino County, shipped a total of 89 cars of fruit in 1919.

The Pomona Valley received an average of five inches of rain up to December 10.

A new firm, the Santa Ana Preserving Company, is erecting a factory at Santa Ana, Orange County.

The Yucaipa Apple Growers Association of San Bernardino County packed 72,300 boxes of apples in 1919.

The first Eastern vegetables from Brawley, Imperial County, were two cars of spinach shipped on December 11.

The 1919 citrus crop of Orange County is the heaviest ever grown there and in value will total $15,000,000.

Imperial Valley cotton growers held a meeting in El Centro recently to discuss means of getting better cotton seed.

The Artesia section of Los Angeles County this year shipped 224 cars of sugar beets, 150 cars less than in 1918.

The railroad to the new townsite of Ripley, on the eastern edge of Riverside County, will be completed February 1.

A Riverside firm has issued a bulletin calling attention to the local section as a natural home of pecan orchards.

On the Faries ranch near Indio 75 date palms of the 1913 importation yielded 2,700 pounds of fine Deglet Noor dates.

Eucalypts will be planted in the dry, windswept country east of Ontario in San Bernardino County, to prevent soil shifting.

Pomona voted a $30,000 bond issue on December 11, the proceeds to be used for needed street paving, jail and storm drains.

The directors of the orange show to be held in San Bernardino in February have leased Urbita Park and will cover ten acres with big tents.

The Santa Barbara chamber of commerce is carrying on a campaign for the planting of wild flower seeds along all highways leading to the city.

The city of Riverside has been given a permit by the forest service to use 23 acres in Bear Valley, San Bernardino County, for a municipal playground.

The Coast and General

Canada's apple acreage for 1919 is twice that of 1918.

Oregon has more than 8,000 acres planted to walnuts.

Seed potatoes are scarce in both Colorado and Idaho.

A heavy acreage of figs is being planted near Umatilla, Florida.

The biggest cabbage acreage in Texas is 450 acres at Asherton.

Potatoes in Oregon are higher, selling at from $3.50 to $3.75 a bag.

The Eugene, Oregon, fruit growers shipped 49 cars of apples in 1919.

The California lettuce crop is estimated at 9,500 acres, which will fill 4,328 cars.

The Mosier, Oregon, fruit growers have built a $25,000 community packing house.

An immense deposit of high grade gypsum is being developed at Winkleman, Arizona.

Twenty-one islands in Prince William Sound, Alaska, have been leased for fox farming.

A movement is on foot to hold a potato show at Los Angeles for the entire Pacific Coast.

More than 250 cars of apples were produced this year in the district about Lewiston, Idaho.

Canals have just been finished for the irrigation of 10,000 acres in the Walker Basin, Oregon.

Washington prices for turkeys at Stattle and Tacoma are 35 cents live weight or 45 cents dressed.

Four carloads of dairy cattle were shipped from Chandler, Arizona, to Havana, Cuba, on December 10.

At the Yuma sale of government lands 175 acres were sold at prices ranging from $180 to $500 an acre.

Farmers around Svenson, near Astoria, Oregon, are setting out a large acreage of the New Oregon strawberry.

Cotton growers of Graham County, Arizona, wish to purchase 1,500 pounds of good Mebane seed for next year's planting.

The 1919 crop of peppers in the Isle of Pines is about 75,000 crates and 400 acres of other vegetables are being grown.

The largest cargo of apples ever leaving the Hood River Valley in Oregon was 25 cars in one train recently sent to England.

A grade cow of mixed breed at Florence, Washington, produced 1,132 pounds of milk and 60 pounds of butter during October.

One acre of Delicious apples at Selah, Washington, is said to have returned a net profit of $2,000 for each of the last four years.

One Guernsey cattle raiser near Astoria, Oregon, recently purchased 31 Guernseys in Wisconsin, 17 of them importations from the Guernsey Isles.

A farmer at Harmony, Skagit County, Washington, harvested 75 bushels of wheat per acre from January sowing, worth $150 per acre at the mill.

The government is asked to apportion the 2,000,000 acres on the Klamath, Oregon, reservation to the 1,150 Indians living there, so that they may develop the farms.

The Outlook

The symposium begun on third page and continued on others affords a most excellent review of producing conditions on this Coast

It is by the Farmer for the Farmer

THE WALNUT OUTLOOK

By Carlyle Thorpe, Manager California Walnut Growers Association.

AS the population of the United States increases, so also does the area of improved farm lands. While it is true that our population is increasing at the rate of 21 per cent every ten years and that the acreage of improved farm land is increasing only 15 per cent during the same period, nevertheless the unimproved area which is largely used as grazing land for cattle is constantly becoming very limited. It seems most apparent that the area of cheap grazing land in America will continue to diminish and as it does we may expect a shorter production of cattle with a corresponding higher level of prices for meat.

The American public is already giving considerable thought to possible meat substitutes. Nuts seem to be the most ideal substitute for meat, and at present prices, of these two foods, nuts are really much the cheaper when measured in actual food vaiue units.

Thus it is not surprising that the consumption of nuts in America should be so rapidly increasing. Wainuts are generally conceded to be the most popular nut on the market. They are among the most nourishing foods, containing 3,180 calories per pound as against beefsteak, for instance, with less than 1,000 calories.

Few of us appreciate the fact that the output of California walnuts has more than trebied since 1914, this year's crop reaching the remarkable total of 53,000,000 pounds, or more than the entire United States consumed of both domestic and imported walnuts in 1914. Still the goods have moved out at prices that have proved generally profitable to the growers, which is certainly evidence of the fact that many people are using nuts as a substitute for various kinds of meat.

It seems easily conceivable that America wiii ultimately consume on an average one hundred to two hundred million pounds of walnuts annually, and at prices that will prove profitabie to producers. There is perhaps less chance of overproduction in the California walnut industry than in most other orchard undertakings. The crop is one that is comparatively easy to produce and harvest, is not as susceptible to damage by the elements as most other tree crops. We may thus expect that the walnut industry in this state will rapidiy continue to increase and to prove generaily profitable.

PROSPECTS OF THE RAISIN GROWER

By Wylie M. Giffen, President California Associated Raisin Company

ON AN average we have probably never had a better year in the history of the business than the one just closing. Crops have been good, weather conditions for curing have been exceptionally good and prices far higher than we have ever dreamed of getting. Of course the increase in price has been largely offset by the increased price of labor, and in fact everything that enters into the producing of grapes, but after aii aliowances are made for these there are but few fruit growers in California that will not make at least some money. I think, however, this is not alone true of the fruit growers, but of the farmers the world over, and the prosperity we are now enjoying here is being enjoyed by the producers of corn, wheat, hogs, beef, sheep, and in fact practically all other farm products.

As to the future, of course, as you suggest, a prophecy made today might look very foolish a year hence.

In regard to our business, as far as our organization is concerned, we are neither trying to encourage nor discourage planting. We believe if the growers continue to sell their product through their own organization so that these products can be advertised, that the consumption can be kept up with the normai planting which is now from 10,000 to 15,000 acres a year, and, of course, increasing the total amount of raisins very rapidly. From the time we were producing 20,000 tons of raisins a year in 1890 until we were producing about 70,000 tons in 1912 there never was a year when we did not complain of overproduction, and there never was a year in that time that an entire crop of raisins sold for more than the cost of production to the producer. There were times when parts of some crops sold for a fair price, but never an entire crop, and the reason attributed for it was the fact that there were too many raisins produced. Last year's crop amounted to about 165,000 tons and was entirely eaten up. This year's crop wiil amount to 175,000 or 180,000 tons and there would be no difficuity in selling 40,000 or 50,000 tons more than we have. Of course, there are many contributing causes to this great increase in consumption. There has been some reduction in the amount of importation of currants, and, of course, the unusual demand for all food products has been helpful as far as raisins are concerned. In addition to this there are probabiy a good many raisins that are finding their way into private homes these days to be used in the manufacture of family liquor, but we feel absolutely sure in our own minds that the biggest single factor in the increased production of raisins has been the fact not only that we are advertising extensiveiy but that we are marketing in a fairly inteliigent way, and to reply in a word to your question as to the prospects of the raisin growers I would say if we continue these same activities it is my judgment that we can sell for at least a fair price as many raisins as we can produce in this state for many years to come.

PRUNE AND APRICOT GROWERS

By F. M. Coleman

THOSE who grow prunes and apricots have been favored with the best year of their experience in 1919. The largest prune crop, about 250,000,000 pounds, with much the largest price ever received, naturally puts the grower in a pleasant frame of mind. The cooperative pian of marketing did not make the crop but is very largely responsibie for the price.

At the start of the war and just before the organization of the California Prune and Apricot Growers, Inc., the outlook for these fruits was unfavorable enough to reduce planting to the minimum. During the last three years planting has revived to the extent of using all possible nursery supplies; 80,000 acres of bearing prunes and 40,000 acres of bearing apricots are being increased now at the rate of 14,000 acres of prunes and 5,000 acres of apricots annually. Very much has been done to stabilize the markets and to improve and standardize quality of fruit.

The grower has recently learned that the success of his industry depends as much on efficient and scientific marketing as on the like character in production.

A great light has dawned on the producer, revealing his ability to save unnecessary waste in added cost between producer and consumer by the modern system of cooperative marketing.

The outiook in our industry is very favorable provided due intelligence and caution is exercised in directing its development. A profitable product always insures an increased production, which puts a very heavy responsibility on the marketing part of our industry to develop and maintain a demand at a profit, equal to the increasing suppiy.

DRIED PEACH PRODUCTION IN CALIFORNIA

By J. L. Reeder, Assistant Manager, California Peach Growers

THE question is often asked by those who contemplate planting new or additional acreage: "What should I plant to secure the best returns on my investment?" As representatives of the California Peach Growers we naturally say "peaches, preferably Muirs or Lovells, provided the soil is suitable." It naturally follows that a recommendation of this kind will carry very iittle weight unless it can be supported by facts which are either a matter of common record or emanate from some recognized authority. In order that a comprehensive view of the situation may be obtained without unnecessary detail, we must recall briefiy the condition of the peach orchards, as weil as the market, prier to the organization of the California Peach Growers as compared with conditions at the present time.

For several years preceding our organization the average price secured by the growers for dried peaches (average grades) did not exceed three cents per pound. Through the efforts of the association we were able to return to our growers an average of the following prices: 1916, 6½ cents; 1917, 8.32 cents; 1918, 11 cents per pound, based on average gradings. While the present season is not sufficiently advanced to enable us to determine how much we shall be able to return on the 1919 crop, we feei confident that it will show an advance over the price paid last year, which will be quite satisfactory to our members. In addition to the above a dividend of eight per cent was paid to the stockholders. During the period when such extremely low prices prevailed many orchards became diseased, were aliowed to die from lack of proper care, or were uprooted and replaced with other crops in order that the farmer might receive a reasonable return for his efforts.

The stability of the market, which is the direct result of cooperative effort, together with the very favorable prices which have been secured during the last four years, encourage the producer of dried peaches to the extent that he is willing to give his orchard the proper care and attention. As a result of improved conditions we now see progressive farmers on every hand endeavoring to improve the quality of their fruit by using advanced methods of pruning, spraying, using fertilizers or cover crops and otherwise safeguarding the health and productiveness of their trees. It is noticeable that many growers have learned that proper thinning is necessary to produce a larger percentage of the higher priced grades, as Fancy and Extra Fancy.

The method of packing and marketing dried peaches has also been an important factor in making their production a safe investment. The elimination of the Extra Choice and Jumbo grades correspondingly raised the standard of our other grades. The introduction of our practicaily peeled peaches (the machinery for the manufacture of which is controlled by our own patent) has, on account of the sanitary methods of preparation and attractiveness of the product itself, created an enormous demand throughout the United States and other countries. The practically peeled peaches are packed in attractive 11 ounce, two pound and five pound machine sealed cartons, also in bulk, 25 pound and 50 pound cases.

The foregoing will, we believe, justify our assertion that peaches will be a profitable investment, especially when the fact is taken into consideration that but a very limited acreage has been planted to peaches during recent years to replace those which died or were taken out. The average production per year of dried peaches for the past five years in this state has been approximately 30,000 tons, and as our intensive and systematic national advertising is constantly increasing the demand far in excess of our ability to supply, we feel that our suggestion to plant peaches is worthy of careful consideration.

SHALL WE PLANT?

By Frank L. Palmer

YOU have asked me to express my opinion upon two important questions. The answer to one of them is clear—at ieast I think it is clear—and the answer to the other seems most sadly obscure.

First, "Shali the orchardist plant to the limit?" As to citrus fruits I think the answer should be "No." There already exists a considerable overplanting of both Valencia oranges and iemons. There is a better outlook possibly for Navels but the marketing season for Navels is year by year being shortened. The late market which a few years ago was the most profitable of the year, has more recently been steadily encroached upon by the early shipments of Vaiencias, and at the present time the eariy Navel market is competing with an oversuppiy and consequent late shipments of Valencias. So that the Navel market is being shortened at both ends. The most serious aspect of the situation is that there are in Orange County large plantings of Vaiencias not yet in bearing, that in Tulare County there are perhaps 15,000 acres of Navels not yet in bearing, and that in Ventura County and other sections there are large plantings of lemons not yet in bearing.

I understand the sentiment in Tulare County among the most experienced orchardists is that there is more

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

THIS WEEK'S COVER

Twenty-five thousand tons of California walnuts this one year is the result of tilth and upkeep such as indicated in the cover illustration. This exceptional care has been given an impetus by the prices which have been obtained during the past few years. This year the state produces its biggest crop for which it will receive the biggest price in the history of the industry. Practically every available tree has already been purchased and contracts are now being made for 1921 delivery. A great industry, a growing industry.

LOOK UP, NOT DOWN

Look forward and not back—though we have looked backward in the present issue of the Cultivator to the extent of securing data for conclusions as to what the future has in store for us. Some of California's largest producers have aided us in this backward look or review of California's conditions agriculturally. This in order to afford the thinking farmer an opportunity for thinking ahead.

The coming year will be a great one in California's productive industries if the estimates of thinkers whose articles are in this issue are verified. And everything looks toward such verification. It will be many years before the world will be producing normal crops. America will be compelled to take up the burden of feeding the world to a greater extent than she has ever done before. Before the war American agricultural exports were gradually decreasing. Year by year our population with its demands has increased more swiftly than our production. The war made a material change, and with food economies and improved methods and appliances the farmer was enabled to overcome the labor shortage, and this country exported a tonnage undreamed of as a possibility. We are still producing, but the food and other economies have been greatly lessened.

HAPPY NEW YEAR

While the joy bells ring with the glad Christmas time passing and the new year coming there is occasionally a touch of pathos and here and there suffering but Peace on Earth is coming and Good Will toward all will prevail.

Speed the Day.

For our readers, every one, we hope this may be a year full of opportunity for service, opportunity for speeding the day of Peace and Good Will, opportunity for Happiness.

MY CREED

I believe in my job. It may not be a very important job, but it is mine. Furthermore, it is God's job for me, if I am honestly trying to do His will. He has a purpose in my life with reference to His plan for the world's progress. No other fellow can take my place. It isn't a big place, to be sure, but for years I have been molded in a peculiar way to fill a peculiar niche in the world's work. I could take no other man's place. He has the same claim as a specialist that I make for myself. Yes, I believe in my job. May I be kept true to the task which lies before me—true to myself and to God, who intrusted me with it.

I believe in my fellow man. He may not always agree with me. I'd feel sorry for him if he did, because I myself do not believe some of the things that were absolutely sure in my own mind a dozen years ago. May he never lose faith in himself, because if he does, he may lose faith in me, and that would hurt him more than the former, and it would really hurt him more than it would hurt me.

I believe in my country. I believe in it because it is made up of my fellow men—and myself. I can't go back on either of us and be true to my creed. If it isn't the best country in the world, it is partly because I am not the kind of a man that I should be.

I believe in my home. It isn't a rich home. It wouldn't satisfy some folks, but it contains jewels which cannot be purchased in the markets of the world. When I enter its secret chambers and shut out the world with its care, I am a lord. Its motto is service, its reward is love. There is no other place in all the world which fills its place, and heaven can be only a larger home, with a Father who is all-wise and patient and tender.

I believe in today. It is all that I possess. The past is of value only as it can make the life of today fuller and freer. There is no assurance of tomorrow. I must make good today.

FOR THE THINKER

At a meeting held in Los Angeles last Saturday, Dean Thos. Forsyth Hunt of the college of agriculture made an address on the motive for better farming. It was a farm bureau meeting to consider matters of rural betterment. As an incident of the address one paragraph touched upon the Japanese question. Here it is:

"In a certain county in a certain state of a country beloved by all of us, one-half of all the children born outside the incorporated cities in 1917 had two Japanese parents, while one-third had two Mexican parents. It is a fair guess that these races are not far from twice as prolific as the white race which occupied the main city of this wonderful country. I venture that there is not a Protestant church in that city whose cradle roll will maintain its membership. It follows as a mathematical certainty that if conditions continue the Japanese and Mexican races must outnumber the white race, and it is only a question of time in which the principal city of this beautiful county, which is now conducting a better community conference, will have either a Japanese or a Mexican mayor, I am not quite sure which."

Yet the unthinking sometimes say Californians are inspired by race prejudice and race hatred. Californians and Pacific Coast people generally are thinking a lot and talking a little as to the heritage of future generations.

AMERICAN FARM PRODUCTS

It is but a very few years since the department of agriculture called attention with much pride to the fact that the annual production of farm crops of the country totaled in value more than ten billion dollars.

Absolutely accurate figures as to the entire farm production may never be had, but approximately this year's farm production, including livestock, totals in value over 25 billion dollars. In corn, wheat and other cereals alone there is more than the ten billions of the total production of some four or five years ago. Then there is hay with another five billions. And one of the minor items is a two billion dollar seed crop, which is surprising because we have looked at our importation of sugar beet seed, Dutch bulbs and other agricultural seed and considered that America produces no seed. In fruits the country has produced over one billion dollars' worth. This is not surprising to the Californian acquainted with the citrus industry which alone is responsible for one-tenth of a billion. Then animal husbandry is responsible for two billion dollars' worth of hogs, one billion worth of sheep, two billion of dairy products. Then comes the little old farmyard hen. A half a dozen years ago we predicted she would some time lay $500,000,000 worth of eggs. During the past year eggs and other poultry products totalled in value over one billion.

But what is a billion dollars to the human mind? If Adam had saved a dollar a day and lived to the present he would only possess all told about two million—that is, unless the savings bank had aided by compounding interest. It takes a thousand million to make a billion.

KEEPING UP INSURANCE

The government, through the bureau of war risk insurance, wrote approximately $40,000,000,000 of insurance upon the lives or more than 4,500,000 service men and women. This is a larger volume of insurance than is in force in the old-line insurance companies in the United States. Approximately 90 per cent of the men in active service during the war were protected by war risk insurance, and the average protection was $8,700.

Great numbers of the boys are now dropping their insurance. They should keep it up and it may be still renewed if it has been allowed to lapse.

THE OUTLOOK

Continued from Page 851

costs and prevent profiteering than any other one thing.

In the year 1920 there will be opportunity for greater cooperation than ever before. The farmers of the state must and will unite, not alone for more effective marketing of their products, but to improve their purchasing powers, to aid in production, to protect themselves from unjust legislation and to be generally on the alert for whatever may come.

Two of the historic steps taken by the farmers in 1919 were the formation of the state farm bureau and the organization of the horticultural and agricultural legislative committee of the farmers' cooperative organizations of the state. These will both be heard from in 1920 and through them the farmers of California will speak in no uncertain tones.

The development of the land settlement idea is taking root deeply and next year will be firmly grounded in the ratification of the $10,000,000 bond issue provided by the last legislature. This is significant in view of the pressing need for a thorough consideration of the Oriental problem as it faces us at the present time. The farm worker of today will be the farm owner of tomorrow without a doubt. The future of our great state lies largely in the hands of our people to decide in 1920 whether we will help to put our own children on our farms or those of a foreign race.

The protection of our agricultural industry from dangers within and without our borders devolves upon the newly created department of agriculture, another accomplishment of the year just closing. The plant quarantine to prevent the introduction of pests and diseases not now existing in this state; the standardization laws to prevent deception and the sale of fruit unfit to eat, thereby protecting both producer and consumer; the control of infectious diseases of animals, and the many other phases of the department's work are becoming increasingly effective even though seriously hampered by shortage of funds. The combining of the various branches of the agricultural work into one department is already telling in increased efficiency and will even more during 1920 in providing the needed protection to the California farmer, and he must respond with his hearty cooperation to render it effective.

State Director of Agriculture G. H. Hecke in a recent article said: "In this new era of advanced agriculture, the intelligent development of those projects which make for the agricultural progress of the state should be seriously considered by all who have the interests of the commonwealth at heart. We must exclude the things that appeal to us personally at times and promote the things that vitally affect the people at large."

Here, then, is the opportunity and the call for the California farmer in 1920. Will he rise to it? We believe he will. If he does, we look for a great development of agriculture the coming year, despite the problems of labor, transportation and increasing cost of supplies, for he will attack and solve these problems in the big way that he has done with his other problems in the past. The farmer has demonstrated that he is the balance wheel in American economy and he will continue to be in 1920.

* * *

J. M. Henderson, president Sacramento Bank, touches in his article upon animal husbandry and its outlook. See his article at top of Page 864.

SHALL WE PLANT?

Continued from Page 853.

encouragement to plant figs, peaches and olives than to plant orange trees, and I concur in that opinion.

Secondly, as to the general business outlook for the next few years, I am not so rash as to be willing to venture a prediction.

There never was a time in the history of our country when Americans were confronted with problems of greater importance to our social welfare. The underlying causes of the present social unrest and its solution are questions which are taxing the wisest minds. If they are settled right, settled uopn a basis of peace and justice and good will between employers and employed, there is a period ahead of us of unprecedented prosperity, but at the present moment the outlook is not encouraging. The spectacle of the United States senate doing politics at a time when the highest patriotism is demanded is not pleasant to think about. Both Republicans and Democrats seem more concerned with partisan advantage than with adopting the treaty of peace. And meanwhile every avenue toward a new era of reconstruction and progress is apparently blocked by the failure to enact a formal declaration of peace.

Let us not be deceived by politics masquerading as patriotism uor by ambitious politicians masquerading as patriots. It is high time that the force of public opinion should express itself in such unmistakable terms that public servants, honored with the highest places in our government, should remember that "you can't fool all the people all the time."

THE CITRUS

By A. Layman

SHALL I plant oranges and lemons?"

Surely, provided you can buy the stock.

Every nurseryman is already sold out on navel stock; there is still a small supply of Valencias and Eureka lemons. And the new year will not be very old before these few remaining trees will be picked up. The past year has been a wonderful one for the orange grower; the lemon grower has done well, but the return has not been so liberal as he expected.

Following the usual custom of Californians, and perhaps of all producers, we are observing what our neighbor is doing, and, of course, following his example. This accounts for the fact that all navel trees have been gathered in whereas a few years ago Valencia trees were sold and navels were proving a drug. Now, if planters will follow the other rule, in effect, to plant what others are not planting, a better result will be secured. Like everything else, from salt to sugar, trees are high. Ordinarily deciduous trees are commanding $50 to $60 per hundred; walnuts as high as $2.75 each; one year old orange or lemon bud $1.25 to $1.50, two year old bud $1.50 and up. These were the prices a few days before the Cultivator went to press.

Excepting where long distance shipments are made, nursery citrus trees are now sold balled. Where this work is done carefully and the setting equally so, 100 per cent stand should be secured. Plant 20 to 28 feet apart according to soil and as to whether you are planting for your own care and keeping or, as one orchardist has expressed it, "for sale to the other fellow." Where one wishes a long lived orchard which will produce in later years he should not plant closer than 24 to 28 feet. Dig holes deep and broad in soil perfectly prepared, set the balled trees no deeper than they were in the nursery. At least, such should be the case if the bottom of the hole has abundance of fine loosened soil as it should have. The ball will then settle so that the tree will be somewhat lower than it originally stood in the nursery. Fill in with dirt, pack very lightly so as not to break the ball, follow immediately with water, cultivate, irrigate again in two weeks, protect from sun, rabbits, etc., by using tree protectors. If nothing better, tie old newspapers around them; where one's time is valuable, the prepared protector is best and cheapest. Plant a few rows of corn for winter protection.

In no case plant more than can be given the best of care; only the exceedingly rich man can afford to give indifferent care to an orchard of citrus trees. The cost of land, the cost of trees, the cost of labor call for most careful attention to the young orchard if these costs are ever to be returned.

PRUNES, PLUMS, CHERRIES

By Leonard Coates

NOT having reliable statistics at hand it is not possible to give with any degree of accuracy the number of trees planted of these various fruits. As a rough guess, we may suppose 1,500,000 prune trees planted last year and about the same in prospect the present season, which number would be increased if the stock were available. Probably 50,000 plum and 25,000 cherry trees would be a reasonably safe guess, with some increase in plum trees for this season, and the same being restricted owing to shortness of supply.

The future is particularly bright as to these fruits, simply because of increased demand and ever expanding market and the fact that we have a practical monopoly in the production of large shipping and canning plums and sweet cherries for the same double purpose.

The great impetus given the prune will mean justifiably increased planting for many years. No one yet has any conception of the demand that will ensue as a result of the advertising campaign of the Prune and Apricot Growers to make known their "Sun-Sweet" brand, and it will be a market hitherto unexploited, for a majority of the readers of high class periodicals published in the East have had but little acquaintance with our dried fruits. And the great dehydrating campaign now going on will only tend to draw the thoughtful attention of the public to the benefits to be derived from eating more fruit especially when the expense is so much lessened by the reduction of transportation charges when water and tin are eliminated. Further than that, dried fruits, properly cooked, are more palatable and free from any possibility of injurious content.

Planting

When the trees are received from the nursery, after inspection is made, untie all the bunches and spread the roots in a wide, shallow trench, covering them with fine earth so that no spaces are left for air to enter. Water well if weather is dry. Your local inspector will help you in every way possible. Do not abuse him if he does not inspect your trees the moment they arrive; he is doing the best he can.

I always advise that the diameter of the hole is of more importance than the depth. After rains commence it is too late to "shoot" with dynamite, so dig large holes, at least two and one-half feet across and two feet deep, with bottom of hole convex, allowing for natural, downward spread of roots. Press some fine earth around the roots with the hands and then fill in. Do not let the point of union of bud or graft be more than one inch below ground after earth has settled.

Remember you can make no better investment than careful attention to all of these details. If your inspector

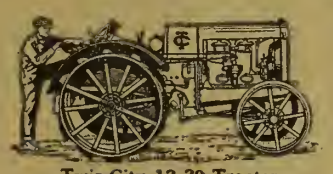
Where The Going Is Worst

In the hard spots—under adverse conditions—that's where the TWIN CITY 12-20 proves its superiority. The surplus power of its 16-valve-in-head engine masters the worst conditions of power farming. TWIN CITY tractors perform dependably in the severest service because they are *built to do the work, not to meet a price.*



Twin City 12-20 Tractor

Twin City 60-90. Twin City 40-65
Twin City 25-45

Twin City 16-30 Tractor

All Steel Twin City Threshers
22-42, 28-48; 36-60

THE sixteen-valve, four-cylinder engine with its counterbalanced crankshaft, removable cylinder head and cylinder sleeves, is the most successful kerosene burning engine made. Designed, not adapted, for kerosene—and developed in our own great plant by our own engineers. Transmission drives *direct on both forward speeds.* Gears drop forged, steel cut and case hardened, run in oil bath in one-piece, dust-proof case. Hyatt roller bearings. The simplest, most accessible and dependable tractor for your farm.

We have a widespread organization of branches, distributors and dealers. Write and we will direct you to nearest TWIN CITY dealer. Send for catalogs.

Our 7th Annual Tractor Thresher School is now in session. Write for details.

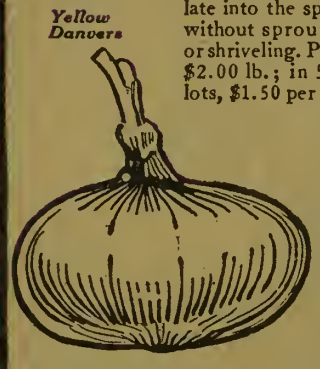
Onions
—a crop that is sure to pay

Right now is the time to get onion seed because the time of planting is at hand. And remember: C. C. Morse & Co. are onion seed specialists. You can rely on Morse's seeds to grow and produce; true strain, soil-tested! Here are three varieties we particularly recommend:

Australian Brown, a very early, hardy variety; does well in California. Should be planted early on low, wet ground. Skin is thick; color a rich brown. Keeps late into the spring without sprouting or shriveling. Price: $2.00 lb.; in 5 lb. lots, $1.50 per lb.

Ohio Yellow Globe is the best of the yellow varieties. Skin is bright, glossy orange-yellow; the flesh is white and fine-grained. Bulbs are remarkably uniform in size and shape; stand shipping well. Price: $2.50 lb.; in 5 lb. lots, $2.10 per lb.



Yellow Danvers is the best known of the yellow flat onions; extra hardy and a heavy yielder. Bright orange yellow; flesh white and firm. A standard market variety. Price: $2.25 lb; in 5 lb. lots, $1.75 lb.

O. K.'s the trees it is the planter's fault if he does not get a perfect stand. One of the most prevalent causes of partial failure in young orchards is the neglect to keep roots moist all the time until they are permanently set in the ground. No better plan has been advised than the use of a barrel of water on a sled, drawn around while planting is going on with a bunch of trees in it and each tree placed in the hole while roots are still dripping.

Pruning

Dr. Whitten and his assistants are advocating the non-heading of a tree the first year and, from my own observation and experiments in our own orchards, I am inclined to agree, although for years I have advised that a tree should be left 24 to 30 inches high after first pruning rather than be cut to 16 inches, the usual way. Dr. Whitten's method causes all of the otherwise dormant buds to push out into spurs rather than to force a strong wood growth at top. Results have shown that this method will in a few years show a tree larger in diameter as well as prepared with fruit spurs to produce an earlier crop.

THE NURSERY OUTLOOK

By J. S. Armstrong

THE present unsurpassed activity in the nursery business began immediately following the signing of the armistice. At once the demand became strong for all lines of stock, ornamental as well as economic. Every rural home seemed to have neglected crops that did not tend to immediate food productioon, therefore in planting annual crops were largely substituted for fruit trees. When the fighting ceased there came a wave of reviving the home place and ornamentals were in active demand, followed later in the season by the planting of the home orchard, a variety of fruits for family use.

The 1919-20 booking season started earlier and stronger than any previous year and advance orders were received early in the season for the total available stock in some lines of deciduous fruit trees. This does not mean that the home planter will be unable to get the stock he needs, for every nurseryman reserves some of all lines to meet this select trade. But the outlook for the large commercial planters is that not more than 40 per cent of them will be able to get all they want in the way of deciduous fruit trees, grape cuttings, etc. As nurserymen do not finish digging this stock before the first of January, the surplus, if any, will not develop until that time. Catalogues are usually issued in December, and by that time growers have rather definite knowledge of what they can offer. They can not, however, risk reservation of a heavy stock or some of it will perhaps remain unsold.

The strongest demand has been for peaches, walnuts and apricots, and it is anticipated that it will still further increase in 1920. The outlook for another season is the brightest that ever faced the California nurserymen and includes every line of stock grown. Prices will keep pace with the increased market prices of fresh and dried fruits which have of late been unusually favorable to the grower. This statement calls to mind the splendid returns that came to some California peach growers near Redlands, who were fortunate in having bearing orchards of the J. H. Hale. These brought $63 a ton in the orchard, and no doubt the Hale peach will be extensively planted in Southern California. It is a fine freestone with all the firmness of a clingstone, with a flavor second to none. The best yellow cling peaches brought as much as $85 per ton. But all peaches are now under process of improvement, for slowly but surely propagators are adopting the same methods of bud selection followed by the best citrus growers for several years past. This will lead to a rapid improvement in type and no doubt all the peaches recently listed in the Cultivator by a local cannery superintendent will be extensively planted. The California fruit industry is but in its infancy, and with the rapid development so manifest at present, the nurserymen owe it to the grower to improve all standard varieties and develop them to the highest. This is now being done and the outlook is the brightest in history for a steady improvement of all fruits to the highest type possible. While peaches have the strongest call in the south, apricots and walnuts are good seconds, with no danger of overplanting if the best varieties are used.

The planting of cherries, pears, apples and prunes also in various parts of the state is rapidly consuming all the available trees now in the nurseries. The peculiar thing about the fruit tree situation is that there is an equally increased demand in every part of the state wherever fruit is grown commercially.

THE PROBLEM OF THE BEAN GROWER

By R. L. Churchill, Manager California Lima Bean Growers Association

WE are at a loss to know how best to reply to your letter. As you are probably fully aware, the bean market of the United States has been in a rather peculiar and uncertain condition for more than a year past. This statement applies with special emphasis to small white or navy beans, but in general has been true of all varieties. It has been rather difficult to understand why the consuming public has not purchased beans of all kinds very much more freely when a dollar expended for beans would procure for the purchaser a greater food value than was obtainable in any other product offered on the markets. There is no question but that people have spent money very freely to satisfy their desires for luxuries in foods, jewelry, clothing and other lines, and while complaining bitterly about the high cost of living have refused or failed to take advantage of their opportunities to buy the cheaper and in many cases equally good or better articles, available at lower prices. So far as the bean growers are concerned, this state of affairs has caused them to be practically, if not actually, the only producers of valuable food products who have been obliged to sell their product at prices below the actual average cost of production.

We, however, are not pessimists. If the conditions above outlined should continue for another year or two, bean growing would undoubtedly be almost entirely discontinued. We believe that the present state of affairs will be remedied in several ways. First, we think that the end of the wild wave of extravagance will soon come and that people will shortly begin to consider the value of reasonable economy instead of giving heed to satisfying every whim, and when that time comes beans, which are both cheap and high class food, will be given much greater consideration than they have been given during the past year or two. Our association is now engaged in a national advertising campaign that is designed to carry an educational message to the housewives of the whole country. Secondly, we believe that before another bean crop is produced congress will see to it that a reasonably adequate tariff is placed uopn all beans imported into the United States, thus giving some sorely needed protection to the bean growers of this country who otherwise cannot afford to grow beans in competition with beans grown in the Orient, where the labor and other production costs are only a fraction of the costs in this country.

We believe that every farmer should continue to do his best to bring his farm up to its fullest productivity and that in doing this he should exercise his best judgment in determining the crop that his lands will best produce and then grow that crop, whether it be wheat, alfalfa, sugar beets, rice beans or vegetables. The proper preparation and cultivation of the soil go very far toward insuring success. Our particular knowledge and interest is in the lima and baby lima bean industry. We have faith in its future. There are still many opportunities for improvement through better seed selection and consequent production of larger yields of finer quality

THE ALFALFA GROWERS

By G. H. Emory, Manager

OUT of the bewildering upheaval of the world has come a broader understanding. Our experiences have taught us that this must be an era of cooperation; that all must work together for the good of the world, the good of our country and of our own community. Without the spirit of tolerance and sympathy to bind us into one great body we must inevitably fall behind in the march of progress.

Alfalfa Growers Warehouse at Lemoore

Tbis new spirit of cooperation is impressing upon us the necessity of so planning our work that it may benefit others as well as ourselves. We must produce that which is needed by our fellows if we would secure for ourselves our portion of his products. The great body of consumers which depends uopn the labors of the producer must be better served if the producer is to find ready markets for his goods.

Among the farmers of California the cooperative idea is proving the means of benefiting both classes. It is undeniably true that the aim of the growers in forming a cooperative association is to assure themselves of a fair profit upon their investment and labor, while at the same time assuring the consumer a low price. To accomplish this it is necessary to eliminate every trace of speculation and speculators. In a word, waste profits must go.

This standard is the one by which the alfalfa growers of California are working. The 2,000 members are bending their efforts toward universal cooperation in the belief that it will result in increased benefits to both producer and consumer. Little more than a year has elapsed since a little organization of alfalfa growers at Riverside saw the need of a state-wide association. Since that day they have expanded and increased in membership until today their association is strong and healthy and daily increasing in power. Over 45,000 acres of alfalfa, in addition to 12,000 acres of milo and Egyptian corn, are represented in the Alfalfa Growers of California. Five per cent of the total production of the state is represented by the members of the organization.

Enthusiasm is unbounded among these members. The principles and purposes of the association are sound and unshakable. It is an organization which aims, simply and plainly, to get for the grower a fair share of the price that the consumer pays for his product, to eliminate the present method of marketing which permits artificial control of prices and withholding from the market of needed foods. The strength which comes with organization will enable the association to accomplish these aims.

Alfalfa growing today stands very near the head of California's producing industries. Over a million acres are devoted to the raising of alfalfa. It may be assumed that the average value of this land is not less than $250 per acre. When one considers the total investment that is represented by alfalfa lands, the amount is stupendous. Annual production is in the neighborhood of 5,000,000 tons, which represents a crop valued at over $100,000.000.

Broad and far-reaching vision is essential to the conduct of an organization which will organize the handling and distribution of such a crop. The tonnage which the association will market this year is only a small part of the total in the state, yet it involves countless varied activities. The simple goal toward which the association works, namely, the marketing of this crop to the right buyers at the right time, is not easy of accomplishment. It must take into consideration the improvement of farming methods, decrease of cost of production, increase of yields, and installation of business methods of cost determination. System, as found in the modern factory, must be applied to the farm. Storage facilities must be found, whicb means that warehouses must be erected and maintained. Grading and standardizing of the product must be simplified and consolidated. Analysis of production possibilities must be undertaken. Research work in developing additional districts and in creating new markets is essential.

It is evident that such great work cannot be accomplished under individual handling and distribution and that association is therefore a vital factor in the economic welfare of the industry. To the bettered systems of production and to the simplifying of distribution must be added the strength of a democratic organization which will work for the interests of everyone connected with the production of alfalfa or its consumption. This organization, operated on a non-profit basis, is personified by the present association of the Alfalfa Growers of California.

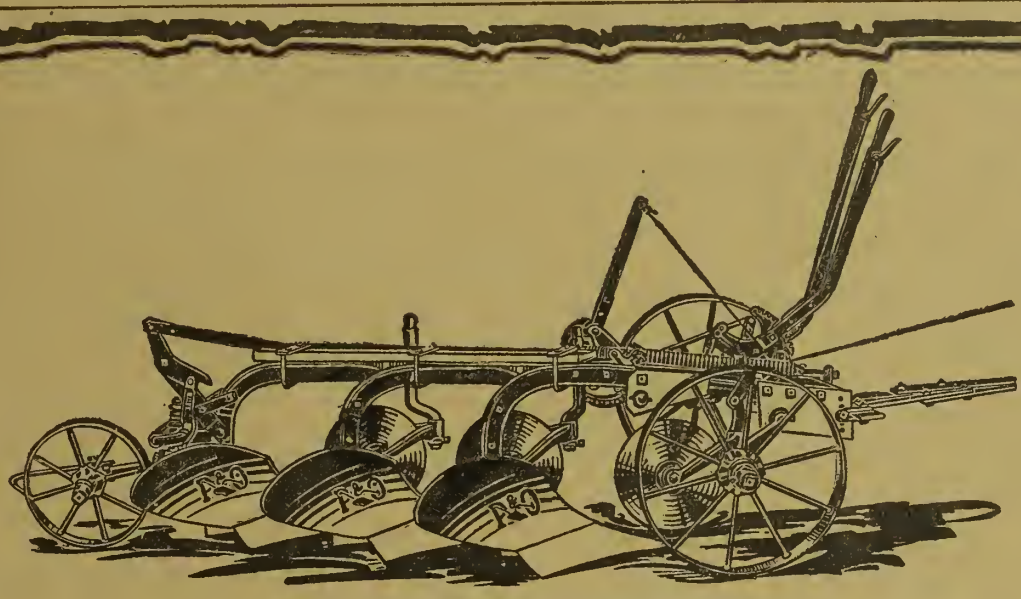
As an example of the development work which this organization is undertaking, there is the mealing of alfalfa hay. There is already a considerable foreign demand for California alfalfa meal, which has not received much consideration, yet which is capable of almost infinite expansion. The association has installed a mill at Bakersfield wbich is turning out a high quality of meal. Members in other districts are watching with interest the operations of the present mill and are in hearty accord with the plans of the association to put several additional mills into operation when the season opens for grinding. They realize that this can be developed into an industry which will be important among the commercial activities of the state.

Then again the association is already establishing warehouses as insurance against the certain loss which is incurred when winter storms can reach the hay. In the past growers have lacked facilities of this kind and as a result have been forced to throw their product onto an already glutted market and suffer a considerable loss. The new warehouses will be points of concentration to which can be brought all the products grown by members in each district. Members will own their warehouses at points convenient to their farms and operate them under the supervision of the home office in Los Angeles. Already warehouses for this purpose have been erected in Oakland, Bakersfield, Perris Valley, Lancaster and Imperial Valley.

The acreage of milo and Egyptian corn is considerable. Tbese products are receiving the same minute analysis and study as alfalfa, with a view to broadening their market and finding new uses for them. The peculiar qualities of these products and their value in certain lines of activities will be exploited. Such intelligent promotion in this field cannot but result in better conditions and resultant lowered costs to the consumer.

For every food product there is a willing buyer at some time and at some place, and at that time and place the product can be marketed at a fair profit. Scientific distribution will place the buyer, distant though he may be, in touch with the producer, to the infinite advantage of both.

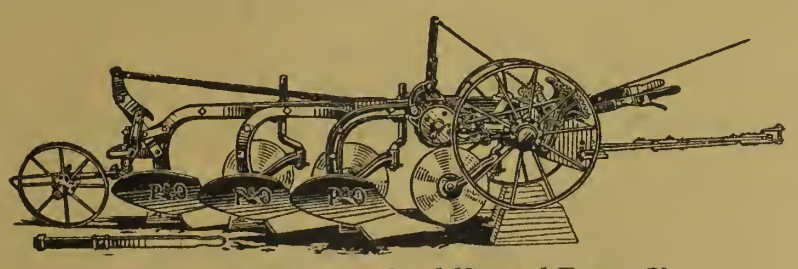
Under the plan of the Alfalfa Growers of California that science is in process of demonstration, backed by the constructive, cooperative work of



P&O Little Genius Power Lift Tractor Plow

THE P&O Little Genius Tractor Plow is made in two distinct types; the No. 5, two- and three-furrow, and the No. 3, four-furrow, with 12- or 14-inch bottoms, and the No. 4, three- and four-furrow sizes, with 10-inch bottoms. The No. 4 is made especially for work in orchards and vineyards, having short, low-lying levers, preventing the overhanging branches from being caught, and with a narrow wheel-tread, permitting work close up to vines and trees. One man operates the tractor and plow.

The mechanical details of the P&O Little Genius are fully described in our catalogue, "P&O Tractor Plows" and we will gladly mail a copy to any address.



P&O Little Genius Orchard and Vineyard Tractor Plow

Ask the International dealer about the Titan tractor and the Little Genius tractor plow. Made for each other by the International Harvester Company, and backed by International Service.

FUTURE OF THE SUGAR BEET INDUSTRY IN CALIFORNIA

By C. H. Weaver

CALIFORNIA with its uniform climate and its rich soils offers ideal conditions for the successful culture of the sugar beet. Records show that California produces a sugar beet of exceptional quality, with special reference to its high saccharine content. Considering these natural advantages and the increasing demand for this staple article on account of the increasing rate of consumption, which reached 89 pounds per capita in 1914 against 15 pounds in 1870, added to the benefits derived from sugar beet culture, such as the possibility of stock feeding on the beet tops, we feel that no other industry has such a wonderful opportunity to rapidly develop.

Sugar beet culture is still in its infancy compared to the old sugar beet growing district of Europe, where the average yield per acre surpasses our average returns very materially. The explanation for this discrepancy must be found in our system of farming. For many years the single crop system was followed on the beet farm, and although our beet growers have produced good crops they have failed to return to the soil the plant food taken out by the sugar beets. They have wasted the valuable by-product, the sugar beet tops; they have failed to apply to their system of farming the most elementary rule of permanent agriculture, crop rotation and fertilization.

As soon as our farmers realize that the sugar beet has a place on every farm and that livestock husbandry is a necessary adjunct to successful agriculture, then sugar beet culture will become the leading crop of California. We feel that the California beet sugar industry offers the greatest opportunity in the world today, both to the grower and the manufacturer, from an economic and financial standpoint.

CARE OF YOUNG TREES AND PROSPECTS OF THE ALMOND, APRICOT AND PEAR

By J. E. Bergtholdt

PLANTERS should see to it that trees are immediately inspected by the receiving horticultural inspector and that roots are not exposed longer than necessary in the process.

Heeling In

Inspection accomplished take the tree home, the roots protected. Dig a trench in loose soil two feet wide, 14 inches deep. Cut strings, put trees in side by side, cover roots with fine earth, being careful that it is well filtered in among the roots. Give a copious watering when the trench is half full, then fill the balance of the trench to the same depth as the trees stood in nursery row.

If the trees open up dry on arrival, they should be taken from the package and buried in moist soil for several days and kept damp.

Preparing for Planting

With a sharp knife cut off all broken and bruised root ends. Cut back the tops to 14 to 24 inches, and if branched, cut back the branches to two or three buds, leaving three or four branches so pruned as to make a symmetrical tree.

Preparation of Soil

The preparation of soil for orchard planting is of great importance. By plowing deep and cross plowing and intensive cultivation the soil must be put in the best possible condition before planting; this preparatory work is laying the groundwork for a structure which is to stand for a lifetime. This is a most important feature and the soil where trees are planted should be placed in the best possible receptive condition.

Planting

Set tree, with the roots and tops pruned as per above instructions, to the same depth as set in the nursery trenches, with roots in normal position, filling in with fine dirt, settling the dirt well among the roots. Before the hole is completely filled it is beneficial to apply two or three buckets of water and then fill with fine earth.

Shading

On account of our long hot dry summer it is advisable to employ a tree protector. This prevents borers.

After Culture

A tree just transplanted has undergone a severe surgical operation. Its vitality, until it has recovered therefrom, is necessarily low. Its growth depends upon the care received immediately after it is transplanted. Irrigation, when available, should be regularly but not too copiously applied. Intensive cultivation works wonders.

* * *

FUTURE OF ALMONDS, APRICOTS AND PEARS

Almonds

Number of trees planted last year, 1,170,000. Number of trees available for planting this season and that will likely all be used in planting, 880,000.

Almonds in North America are grown commercially only in California. Can be grown successfully only in localities free from danger of frost damage, and as a result the limited acreage adapted to almond culture in California will in course of time be unable to adequately supply the consumption of the North American markets.

Apricots

Number of trees planted last year, 899,000. Number of trees available this season and that will likely all be used in planting, 474,000.

Apricots, like almonds, are grown commercially only in California, are adapted only to districts free from frost damage. The acreage where they can be successfully grown is therefore limited. Green, canned, and dried, they have the monopoly of the North American market, and canned and dried the possibilities of their export trade is unlimited. For that reason the available apricot acreage in the state can never over supply the market and in those districts adapted to their culture apricots are a safe bet.

Pears

Number of trees planted last year, 1,004,000. Number of trees available for planting this season and that will likely be used in planting, 788,000.

Pears have a wide scope of adaptability. The coast valleys of California and the foothill regions of the interior are practically immune from serious blight damage, while in many of the interior valleys the blight can be so controlled as to make pears, in spite of the blight, one of the most profitable fruits to plant.

While pears are grown in many localities of the Northwest and throughout the East, yet no other section has the long dry California summer, but has either, as in the Northwest and Middle West higher altitudes, a shorter but more intensive growing season, or, as in the East and South, periods of very rapid and luxuriant growth on account of the weather conditions, both causing a greater susceptibility to blight than under any conditions prevalent in California. As a result the East and Northwest pear grower is so handicapped with loss from blight that he can hardly be rated as a competitor of the California pear grower.

Furthermore, the California Bartlett pear on account of its keeping quality can be distributed to any market of the world, and for the same reason can be canned like a cling peach and will not rag out, aside from the fact that eaten out of hand or canned it is the peer of all deciduous fruits. Eastern pears cannot be canned except for pie.

Due, therefore, to our peculiar climatic conditions in California the Bartlett pear as a canned fruit has no competitor in the world's markets.

This monopoly, enjoyed by the California fruit grower in the growing of not alone pears, but clingstone peaches, almonds, apricots and other fruits, on account of the peculiar climatic conditions in this state, gives to the California fruit grower a permanence and assurance not enjoyed by horticulture in any other section of the world.

THE PEAR IN CALIFORNIA

By Max J. Crow

A CAREFUL estimate indicates there were 6,650 acres of new pear orchard planted in California during the season of 1919. Owing to a shortage in the supply of nursery trees the planting of pears for 1920 will likely not exceed 5,500 acres, though the demand indicates that a much larger acreage would be planted were the trees to be had. Of this total of 12,150 acres probably 85 per cent, or something over 10,000 acres, are Bartlett, the remaining 15 per cent being divided among seven or eight later ripening sorts which are being grown quite extensively in a few sections to meet a limited demand of the Eastern markets for a pear coming in later than Bartlett.

While Doyenne du Comice, P. Barry, Easter Beurre, Winter Nelis, Beurre Clairgeau, Beurre d'Anjou each has its advocate in certain sections, and for the last several years has paid the grower well, yet it is the old reliable Bartlett which will always lead the race unless some new sort of the future shall displace it. At this time it has absolutely no rival during its season and, after the prune, has probably made for its California growers more money than any other one deciduous fruit.

The future for pear growing in this state looks particularly bright as the clear, smooth appearance and high quality has created an enormous demand which, under improved methods of growing and standardization of quality and pack, is bound to open many new markets and stimulate an ever increasing consumption.

And this leads us back to the Bartlett. While the other sorts named can be grown with more or less success in several sections east of the Rockies, throughout that entire territory the "King of Pears" cannot be profitably grown; first, on account of lack of hardiness in the colder sections and, second, on account of its susceptibility to blight, scab and other diseases which flourish during the warm, humid summers of that entire region. During a residence of 11 years in the Mississippi Valley the writer attended a great many fruit exhibits and frequently visted the immense fruit markets of Kansas City, St. Louis and Chicago and never once saw a Bartlett

pear of commercial quality exhibited or offered for sale that was grown east of Colorado, though accasionally a few Bartletts are produced in a few favored Eastern localities, but they are decidedly inferior in appearance and will never cut the least figure in opposition to the Western product. So for all practical purposes the Pacific Coast has a natural iron clad monopoly which neither man nor his laws can break.

Furthermore the coast grower has three strings to this Bartlett bow: He can dispose of his crop fresh to the canneries where it will always be in demand at profitable prices so long as the Pear Growers Association functions; if no cannery is available equally large profits, frequently larger, are to be made by packing the fruit and shipping it East; if for any reason that is not advisable then he can follow the example of the Lake County pear growers who, though many miles of mountain roads stretch between their orchards and the nearest railroad, have found that the dried Bartlett brings them a greater profit than any other crop their lands have ever produced.

CANNING AND DRYING PEACHES

By R. E. Miller

EXPERIENCE of the peach growers of the central San Joaquin Valley, including Fresno, Kings, Kern and Madera Counties, as well as of Merced and Stanislaus, point to a few standard varieties of peaches as most suitable for planting.

Some are suitable for drying, others for canning or shipping green, and others are adapted for two or more purposes. For drying the Muir is generally recommended. It is not as vigorous a grower as some but its habit of low growth is an advantage in economical picking. The Muir is the preeminent peach for drying, being meaty, firm, of good color from the skin to the pit, and ripening early before the great rush of grape harvest. It has the additional strong recommendation of standard quality, commanding a better price on the market and especially lending itself to the process of practical peeling. Stripped of its fuzz and most of the skin by our peeling process, it is without question the finest dried peach ever offered for human consumption.

Two other peaches which are largely used for drying are the Elberta and Lovell. Both of these are also used for shipment fresh, and the Lovell is often used for canning. The Elberta is the finest shipping peach. It often yields a very good tonnage of dried fruit, being left on the tree to attain larger size than when picked for shipment green. As a drying peach the Elberta runs to large sizes which make for better selling qualities. The Lovell is a good bearer and one of the best yellow peaches. Although it is not quite as attractive in color as the Muir and does not peel as readily, it is one of the leading drying peaches. It is extensively used for canning, and considerable tonnages are shipped green. It ripens later than the Muir, as a rule. Very few other varieties for drying are to be recommended under existing conditions in this section of the state.

There are a number of canning peaches suited to planting in this valley; Tuscan, Orange and Phillips Clings, especially the two latter, are advised by most canners. A quantity of clings were dried this year by splitting them on four sides and permitting them to dry on the pit. This fruit proves to have an excellent flavor. It is removed from the pit by soaking overnight before cooking.

In addition to the commercial varieties, there are many excellently flavored peaches and nectarines suitable for the home garden or orchard.

THE FUTURE OF SOME OF OUR NEW FRUITS

By W. R. Wood

IN FORECASTING the future of any of our new products the first essential is to consider their worth, second the effort put forth in introducing them and acquainting the public with their value and use. Many a useful product has never reached the popularity it deserves simply because it has not been properly introduced.

As to the value of the avocado as a food there can be no question. Its high fat content makes it equal to meat and much more easily digested. It would therefore seem that the only thing that could keep it from being used would be a lack of proper introduction at prices commensurate with its actual food value. At the present time it is considered more as a salad fruit and, as the prices would indicate, only to be used by the wealthy.

We are told that in Florida where they are grown quite extensively and the price of seedling fruit runs as low as ten or 12 cents a pound, their consumption is general amongst all classes. When the seedling fruit is off the market and the better varieties of budded fruit are ripe the price is advanced to as high as 50 cents a pound. Thus we see that in order to get it into general use the price must be reduced considerably from what it is at present. At 75 cents to $1 a pound we can not expect avocados to take the place of meat even at its present high price.

The next consideration is the cost of production and marketing. This is rather hard to determine on account of its culture at present being in a more or less experimental stage. However, with the introduction of the better and more prolific varieties the cost per pound of production should be very little more, if any, than that of citrus fruits. The cost of marketing will necessarily be higher until the volume of production reaches a point where it can be handled in large quantities.

The main consideration in giving California avocados favorable publicity is to grow a good quality of fruit and market it in the proper manner so that it will be at its best when it reaches the consumer, and then we need have no fear but that the consumption will take care of the production for many years to come.

In as much as avocados are more or less tender, only the hardier varieties should be planted and on lands where lemons can safely be grown. For commercial purposes only budded trees should be planted, care being taken that the root stock is of a vigorous and hardy variety.

The California Avocado Association has done a wonderful amount of work in its study of the avocado and in eliminating poor varieties and recommending those that seem to have commercial merit, the sole object of the association being to educate both the producer and consumer, the former to know the value of avocados as a food and the latter to grow only the best varieties.

Their work has tended to increase the interest in this fruit to the point where the present available supply of good trees for orchard planting is far short of the demand. The uncertain supply of hardy seed for root stocks and the changing conditions due to the constant elimination of varieties as seemingly better ones were introduced has caused the nurserymen to grow only limited quantities of such varieties as they felt there would be a demand for.

Probably the present supply of good trees in our California nurseries, ready for transplanting in orchard form in the spring of 1920, will not exceed a sufficient number to plant 100 or 150 acres.

The feijoa is another fruit that has particular merit and should be planted more extensively. The tree or shrub, as it may more properly be called, is very ornamental in appearance and perfectly hardy. The fruit has a fine flavor and can be used fresh from the tree or cooked, makes excellent preserves and jelly and for pies is unexcelled.

Until quite recently feijoas have been propagated almost entirely from seed and the quality was uncertain, but with the successful methods of grafting now practiced planters can be assured of getting varieties true to name. The Choiceana and Superba are two of the leading varieties. The former are oblong fruit three to three and one-half inches in length and about two inches in diameter; the latter a round fruit about two to two and one-half inches in diameter. When properly introduced this fruit should meet with a heavy demand.

As with the avocado, the supply of good trees is limited and planting will

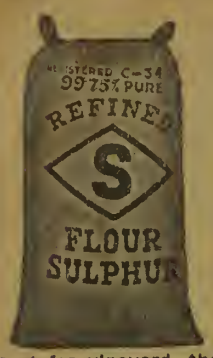
San Dimas, California

SULPHUR



It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the fluffiest and PUREST sulphur that money can buy; the best for vineyard, the best for bleaching purposes, LEAVING NO ASH.

VENTILATED sublimed Sulphur—Impalpable Powder, 100 per cent pure, in double sacks, for Dry Dusting and making Paste Sulphur.

For LIME-SULPHUR SOLUTION, use our DIAMOND "S" BRAND REFINED FLOUR SULPHUR. We can furnish you this sulphur at such a low price that it would pay you to mix your own solution and net you a profit equal to the amount paid out for labor in spraying your orchard, even if you pay your men $4 per day for making the solution and applying same.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre DIAMOND "S" BRAND POWDERED SULPHUR 100 per cent pure. This has increased various crops up to 500 per cent.

Also PREPARED DRY DUSTING MATERIALS, Tobacco Dust, Dusting Sulphur Mixtures, etc.

And "Anchor" Brand Standard LIME-SULPHUR SOLUTION 33 DEGREES BE., Fungicides and Insecticides.

Carried in stock and mixed to order.

San Francisco Sulphur Co.

424 California Street. San Francisco, Calif.

We are equipped to make immediate shipments. Send for "ILLUSTRATED BOOKLET," also booklet "NEW USES FOR SULPHUR", Price List, and Samples.

Please state for what purpose you use the sulphur, quantity needed, and date of shipment preferred.

REMEMBER THE

HORSE-SHOE TREAD

Place Your Order NOW for Nitrate of Lime

Guaranteed not less than 13 per cent Nitrogen—almost 100 per cent Pure.

Nitrate of Lime supplies Nitrogen in the most available form. Packed in solid wooden casks about 240 pounds.

Ask for prices, delivery from warehouse, Los Angeles and San Francisco, or steamer, January, 1920.

Make the reading of advertisements in the California Cultivator a habit. They will broaden your knowledge of the manufacturing improvements.

BIGGEST CROP IN HISTORY OF WALNUT INDUSTRY

By H. H. Warner

THE biggest and most successful season in the history of the walnut industry in California has just been concluded. For the second successive year the most optimistic estimates at the opening of the season proved too low and the actual tonnage was larger than the growers, packing house managers or officials of the California Walnut Growers Association had anticipated. The association, which is credited with marketing 80 per cent of the production in California, has shipped this year more walnuts than were produced in the entire state by all growers last season.

The entire production this year, according to C. Thorpe, manager of the association, was almost twice as much as in 1916 and three times as great as the 1914 crop. The volume of the entire total production in California reached the amazing figures of 52,000,000 pounds and paid the growers about $15,000,000. This immense production is 6,000,000 pounds more than the consumption of both foreign and domestic walnuts in this country as recently as 1914, but even then would provide every man, woman and child in the country with only two walnuts apiece.

In addition to harvesting the largest crop in the history of the industry, the growers received bigger returns than ever before, although buyers were generally surprised that the prices named by the association were not advanced as much in proportion to last year's figures as was the case on most other California food products. The United States bureau of labor statistics shows that the average cost of 22 principal food commodities in October of this year had increased more than 12 per cent over the cost of the same items in October, 1918. The walnut prices represented an increase of scarcely ten per cent over those of last year, and that they were considered fair was indicated by the fact that the association's total estimated tonnage at the beginning of the season was sold within two days after prices were named.

There is no questioning the fact that walnut growers in California have made big money this year, but this has been due largely to the unusually heavy crop rather than to an excessively high price. The advance in the price of this year's crop hardly paid for the increase in the cost of production over last year owing to the necessity for heavier and more frequent irrigation on account of the scanty rainfall last winter.

The crop matured later than usual in many sections but after the harvest started it taxed the capacity of the packing houses to the utmost to grade, pack and ship the walnuts as fast as the growers delivered them. About two-thirds of the entire crop dropped from the trees within ten days following the early rains the latter part of September, and the long dry spell afterwards permitted harvesting under the most desirable conditions. Approximately 25 per cent of the crop were No. 2's in size and the No. 1's averaged smaller than in many years when there is a lighter crop.

There are at the present time about 65,000 acres of walnuts planted in this state, representing an investment of more than $60,000,000. The commercial industry is centered in Southern California. Los Angeles, Orange, Ventura and Santa Barbara Counties produce by far the bulk of the California walnut crop.

The industry has been given a tremendous impetus since the organization of the California Walnut Growers Association six years ago and the practicing of fair merchandizing methods which have always succeeded in moving the crop at prices satisfactory to the growers. The walnut enjoys a most unique distinction among tree products, in as much as it can be stored for a year or more, awaiting disposal, without loss from deterioration. This feature has given the industry a stability and freedom from speculation that is not enjoyed by the perishable food crops. A walnut produced is money earned without anxiety of probable loss in storage while awaiting marketing. Another advantage is that walnut trees are found to bloom and bear fruit after the danger of frost is past. The absence of the smudge pot in the walnut industry is one of its attractive features. Even in California, where climatic extremes are practically unknown, this quality of the tree is not unappreciated.

The remarkable expansion of the industry is evidenced by the fact that nursery stock in commercial quantities suitable for planting next spring is not to be had today anywhere at any price. Thousands of acres which have formerly been in barley, alfalfa or other field crops are being leveled and piped for irrigation in preparation for setting out the trees this winter and spring.

The value of the walnut orchards and land suitable for planting to this crop varies widely in different localities and depends largely upon soil and climatic conditions. Bare land under irrigation suitable for planting is held at from $600 to $1,000 an acre. Bearing walnut orchards can be purchased at from $900 to $2,000 an acre, the average being valued at somewhere around $1,300. The practice of taking out walnut trees and replanting to oranges and lemons, which was common several years ago, has been practically abandoned, as a full bearing walnut orchard in some districts is considered just as desirable property as an orange or lemon grove.

The walnut tree usually comes into bearing at from five to nine years from time of planting and with good treatment will apparently bear indefinitely. A safe estimate of the average yield from mature trees is from 900 to 1,200 pounds per acre. A careful survey of 922 walnut growers, made by the field department of the California Walnut Growers Association last year, revealed the cost of setting out an orchard, including the cost of the nursery trees, to run between $40 and $50 per acre. The average annual cost of maintenance, including taxes over the years before the trees come into bearing, was $45 per acre. The average total cost of planting the grove and bringing it into profitable bearing for these 922 growers was $257.65 per acre. The annual cost of operation of a bearing grove, including irrigation, fertilizing, cultivation, pruning, harvesting, taxes, etc., was shown to be between $40 and $60 per acre. The following table shows the results of the survey in detail with particular reference to the net income which may be expected:

Per Acre	Safe Estimate for Business Purposes	Income Which Competent Men May Hope to Obtain	Income Not Infrequently Obtained Under Favorable Conditions
Yield	1,000 lbs.	1,500 lbs.	2,000 lbs.
Valuation	$1,100.00	$1,500.00	$1,800.00
Gross income (1)	$163.70	$245.55	$327.40
Operation (2)	$60.00	$50.00	$55.00
Packing and marketing	15.50	22.50	30.00
Total expenses	75.50	72.50	85.00
Net income	$ 88.20	$173.05	$242.40
Interest on valuation	8.02 Per Cent	11.54 Per Cent	13.47 Per Cent

(1) Based on average selling price of No. 1 Soft Shell for last ten years—16.37 cents per pound.
(2) All costs, including irrigating, fertilizing, cultivation, pruning, harvesting, taxes, etc.

The success of the industry in this state is largely due to the untiring efforts of the California Walnut Growers Association which is a strictly co-operative marketing organization of over 3,000 growers. Some 30 local associations, each owning and operating its own packing plant, hold the central office, whose management they employ, responsible for the selling of their output. So far this selling expense, including the cost charged to advertising and maintaining field department, has never exceeded three per cent of the f. o. b. value of the walnuts, plus the customary one per cent cash discount to the trade. This is believed to be a record in the economical marketing and distribution of this immensely valuable crop.

Much of the present success of the industry has been due to the aggressive management of the association and its recognition of the possibility

When Writing Advertisers, Mention The Cultivator

of lower returns with increasing production, unless consumption could be increased through advertising. They are directing an advertising campaign in publications of national circulation, and a consistent effort is being made to persuade the consumers to eat walnuts all the year round and to keep the demand ahead of increasing production through spreading the period of consumption.

This propaganda is having the desired effect and consumers are beginning to get away from the old fashioned idea that walnuts are only to be eaten along with turkey, cranberies and plum pudding during the holidays. The importance of the food value of the walnut is being emphasized and the housewife is learning how to use it in salads and desserts through the summer months.

The association serves its members through its field department composed of scientifically trained orchard men and has done exceedingly valuable work in solving problems of production and pest control. An affiliated company known as the Walnut Growers S. ay Manufacturing Company has recently been organized to manufacture and supply at cost to association members material for the control of aphis, codling worm and other orchard pests.

The growth of by-products from this business has been spectacular and profitable. The cull walnuts of the association members are cracked by machinery and the good meats picked out, sorted and sold to wholesale confectioners and candy manufacturers all over the country. This year the value of these meats will run somewhere around five million dollars, returning to the growers per pound almost one-half of the value of their merchantable nuts. The shells from the cracking plants are being turned into charcoal and sold to large manufacturers of chicken feeds.

The proportion of walnut growers who entrust the marketing of their crop to the association is annually increasing and the splendid results which this organization has been able to accomplish in stabilizing the market and distributing the products at satisfactory prices have been an object lesson to all the world in cooperative marketing.

WESTERN STATES EXTENSION CONFERENCE

The extension directors, state leaders, state boys and girls club leaders and state home demonstration leaders, together with representatives of the United States department of agriculture, are to hold their annual conference at Berkeley on December 29, 30 and 31. The eleven states represented will be Wyoming, Montana, Idaho, Colorado, Utah, Nevada, Arizona, New Mexico, Washington, Oregon and California. At the close of that conference those who desire to remain will take a two day traveling tour of inspection through Alameda, San Joaquin, Contra Costa, Solano and Napa Counties. The traveling farm bureau conference which has been an annual feature in California is new to most of the states and this brief traveling tour of inspection is intended to serve as a demonstration to the other states of such a method of holding a conference.

THE TRUE VALUE OF COOPERATION

Cooperative measures among California fruit growers and farmers are now no longer a novelty, but the Eastern farmer declined to proceed along our well ordered lines until he had literally been "driven to the wall"!

Two years ago in Maine something happened that no doubt as an object lesson will have a far reaching effect in the East. Along with the gradual and insistent increase in the price of everything came the increase in the cost of commercial fertilizers. Now the potato growers of Maine use 100,000 tons of fertilizers a season, and in 1919, when the price had reached the grand sum of $96.25 a ton, the humble spud grower ceased to be humble; an indignation meeting was held and the outgrowth was the "Aroostook Federation of Farmers"!

Fertilizer was purchased in carloads, mixed and sold to growers at $35 a ton under the dealers' price. Now, in addition, it is worthy of note that the home mixed fertilizer yielded better results than the commercial product had ever done. In 1920 the association expects to handle $1,000,000 worth of fertilizer business. Thus the true value of cooperation in one of its many phases is apparent.

INCREASE PEACH PLANTING

The Eastern peach grower has been frightened by the fearful inroads of peach yellows, and while he knows the advance of this disease is extremely slow it is deadly when it does come. Georgia produced 4,200,000 bushels annually less than ten years ago. Today, because of the depredations of the yellows, it is producing 2,700,000 bushels. Michigan, at one time one of the principal peach producing states, now has practically no output.

California peach growers have had their troubles with blight, scale insects, and formerly with bad marketing conditions. Today there is no reason why every available acre should not be planted to desirable table, canning or drying peaches.

TO GROW COTTON IN PERRIS VALLEY

By A. F. Clarke

Growing of cotton is to be undertaken in the Perris Valley, and it is predicted that 2,000 acres will be planted the coming season. Ample financial backing has been secured for the enterprise and Riverside capitalists will erect the necessary gin and warehouses to handle the 1920 crop.

A meeting of Perris ranchers was held one night the past week when the cotton proposition was presented by J. C. Odell who has been a prominent factor in the development of the great cotton industry in the Palo Verde Valley in Riverside County.

Mr. Odell stated that soil and climatic conditions in the Perris Valley were similar to those of the San Joaquin Valley where cotton growing has passed the experimental stage. Cotton is produced there for 22 cents a pound and all over that is net to the grower. Cotton requires less water than alfalfa, the staple crop for years of the Perris Valley, and it is believed that 25 cents will be the minimum price per pound for some time to come.

The Riverside Business Men's Association at its last meeting went on record as favoring the cotton experiment and its members will give financial aid to the project. The sum of $20,000 for a cotton gin and as much as is needed for warehouses has already been pledged.

GAS TRACTOR COURSE FROM FEBRUARY 23 TO 28

"Do you operate a tractor? Are you thinking of buying a tractor? Do you wish to learn something about gasoline engines?

"Attend the gas tractor short course at the Citrus Experiment Station, Riverside, from February 23 to 28. You will learn the principles of the gas engine, how the valves and ignition should be timed, how to adjust a carburetor, and many other things which will help you to be a better operator. You will learn the advantages of the various types and styles of tractors and have an opportunity of studying and operating every one of the ten or more makes of tractors which will be used in the course.

"Lecture demonstrations are scheduled every morning from 8:00 to 9:15 and every afternoon from 1:00 to 2:15; practice work or demonstration during the remainder of the time. Several evenings will be devoted to showing motion pictures of various tractors at work.

"The only charge for the course is a registration fee of $1. If you are interested write Citrus Experiment Station, Riverside. The course is limited to 180 students."

FARM BUREAU

Los Angeles County is making a thoroughgoing campaign for increasing its membership and renewing old memberships which expire January 1. The membership dues, which were formerly $1, have been doubled in order to cover membership in state and national organizations.

The state land settlement board has announced that the colony lands in Merced County will be partially opened in the spring, the remainder in the autumn of 1920.

FREE—New Book on Fruit-Fog Spraying!

Every fruit grower should send coupon for the book. Read why Fruit-Fog, the scientifically atomized super-spray, is the ONLY spray *fine enough* to seek out and kill the *hidden* pests—millions of which infest the microscopic niches in bark, buds, and foliage where no coarse spray can reach. The book explains why this amazing Fruit-Fog *thoroughness* is adding *fortunes* to fruit growers' profits each year. Send coupon now.

HAYES FRUIT-FOG SPRAYERS

Fruit-Fog spray is produced by Hayes 300 lb. high pressure and the scientific Hayes nozzle. Its vapory fineness gives it wonderful *adhering* power. No drops form—no solution wasted—no buds or leaves knocked off—as with heavy, coarse, low-pressure sprays. Fruit-Fog Sprayers are skillfully made in every part to give enduring service and greatest efficiency under high pressure. Service stations all over the U. S. assure new parts within 24 hours in case of accident. The Fairbanks-Morse famous "Z" Engine means supreme engine satisfaction.

Valuable Spraying Guide Also Sent FREE

Send coupon telling us how many fruit trees you have and their average age. We'll tell you the style Hayes Sprayer best suited to your needs, and its price. We'll also send our Big FREE BOOK showing 50 styles of Hayes Sprayers and our Valuable SPRAYING GUIDE. Send coupon below today.

The Big Livestock Shows

By H. M. Barngrover

Having again received a great deal of enjoyment and encouragement from attending the American Royal Livestock Show at Kansas City and the International at Chicago, I feel that the readers of the Cultivator might be interested in a little account of my impressions.

California was splendidly represented at Chicago by our state university staff and by the remarkable showing of cattle from that institution that certainly must convince the most skeptical that we have exceptional climate and feed for producing the best cattle in the world.

Other California breeders of Herefords who attended the Eastern shows were: John A. Bunting of the Mission Stock Farm, Mission San Jose; H. H. Gable of the Diamond G Ranch, Esparto, and Romeo Jacks of Monterey. The very cordial greetings that we received at the shows was not only pleasant but encourging because it indicated what we frequently heard admitted that the Pacific Coast is the next big field for Hereford cattle.

One of the biggest things that we can do to put good beef bulls on the ranges and ranches of California is to encpurage a really big show at San Francisco, Sacramento and Los Angeles next year. I am glad to report that we received very much encouragement from the American Hereford Association at Kansas City and from the breeders in general. The showing made at San Francisco in November was a fine start and really foretells what we may hope to do if we all pull together next year. When we can show classes of 20 to 40 well fitted cattle, such as we saw at Kansas City and Cbicago, we are going to convince the ranch and range men that they can afford to buy high class bulls and at prices double their present ideas. All they need is to be shown, and I know of no better way than through the medium of livestock shows.

I wish that more of our breeders would attend those shows and look over the great classes of beef cattle and meet the big hearted, hard headed, practical breeders who have done so much to create and advertise our wonderful beef cattle. It is inspiring and educates us away from the purse-pinching tendencies that too many of us think necessary. We get a broader vision of our possibilities and gain confidence that our fellow breeders will support us by buying the better kind of cattle.

I feel that we in California should follow in the footsteps of [illegible] who have made the Western [illegible] Livestock Show at Denver such a success. We should stress the importance of a bull show—carlots if possible for we have many large ranches that require such numbers. What could be more convincing than to show a long string of well developed bulls at the shows? Since the cow man's business is to produce steers, we should [illegible] the strongest possible steer classes. The steer classes at Chicago were especially strong and showed conclusively the value of good sires coupled with good feeding. There were nearly 500 Herefords at the Royal and a larger number at Chicago.

I believe that attending these shows will convince any new breeder that he cannot afford to miss them. We breeders need the education even more than the ranch and range men for we of necessity must pioneer the introduction of good cattle.

If these few lines will induce some breeder to start fitting registered cattle or steers for our 1920 shows I will feel greatly repaid.

In closing, I wish to mention the enjoyment we obtained visiting some of the large and successful herds near Kansas City. We advance by imitation and what better way than to see how successful breeders arrive at their results?

Morris Holsteins to Many New Herds

The old adage that "it is an ill wind that blows no good" was demonstrated at the sale of Holsteins held by A. W. Morris & Sons, Woodland, at the state fair grounds, Sacramento, Thursday, December 18. The sale, which was made necessary on account of a disastrous fire which destroyed the large barn at the Morris farm, proved to be an opportunity for a number of men just entering the Holstein business to select foundation stock from an unusual offering. The sale not only attracted a large number of new buyers but brought together most of the leading breeders of this state. Besides the local breeders attending, several prominent Eastern breeders, including E. C. Schroeder of Minnesota; B. L. Crampton, manager of the Pabst Stock Farms in Wisconsin; H. M. Corwin and son of Iowa, and C. W. Peters of the Hollywood Farm, Washington, were present.

The top of the sale was registered by the four year old cow, Princess Valley Mead Walker, a 16 pound daughter of Prince Gelsche Walker. She was purchased by H. E. Vogel, prominent breeder of Fresno, for $1,050. Chas. Harrington of Compton paid $1,035 for Riverside Seeley Girl 2d, an eight year old daughter of King Mead of Riverside, with a two year old record of 21.19 pounds butter.

James H. Hayes of Sacramento made a number of choice selections for the newly established Hayes Stock Farm. Gleason & Walker of Hollister, J. D. McKindley of Acampo, Brownell & Marsball of Woodland, Anderson & Fogarty of Sacramento, E. M. Holje of Calistoga were among the heaviest buyers.

Twenty-eight buyers absorbed the 50 cows at an average price of $498 and the 12 bulls, most of which were youngsters, at the avcrage price of $324. The entire 62 head made an average of $464.

The sale was managed by C. L. Hughes of the California Breeders Sales & Pedigree Company, Sacramento. Col. Ben A Rhoades of Los Angeles was the auctioneer and Col. Geo. W. Bell of Tulare was in the ring.

A detailed list of the sale follows:

1. Aaggie Acme Burke, June, 1914; P. Brunold, Modesto, $875.
2. Riverside Seeley Girl 2nd, June, 1910, 751.1 lbs.; Chas S. Harrington, Compton, $1,035.
3. Segis Netherland Walker, March, 1914; Hayes Stock Farm, Sacramento, $575.
4. Segis Pontiac Aralia Mead, May, 1915; Anderson & Fogarty, Sacramento, $300.
5. Riverside Seeley Girl, April, 1907, 795.11 lbs.; A. P. Dutro, Dixon, $230.
6. Queen Pontiac Charlotte, April, 1912, 714.17 lbs.; H. Meckel, Venice, $850.
7. Pauline Creamelle Mercedes, July, 1908, 1,081.98 lbs.; Louis Beck, Modesto, $500.
8. Pride Hengerveld Segis Aralia, February, 1916, 21.16 lbs.; P. Brunoid, $460.
9. Margaret Pontiac Terpstra, August, 1913; E. M. Hoije, Calistoga, $410.
10. Miss Aralia Pontiac Burke, November, 1914; H. E. Vogel, Fresno, $525.
11. Miss Filied Korndyke, August, 1911, 29.67 lbs.; Hayes Stock Farm, $775.
13. Empress Pontiac Electra, August, 1915; Gleason & Walker, Hollister, $500.
14. Colantha Contenta Creamcup, September, 1912; Hayes Stock Farm, $300.

Xmas and New Year's Greetings

from Frank P. Gardiner & Son to Our Friends and Customers

We also wish to announce the safe arrival from Ed Kerns of Stanton, Neb., of the latest and Greatest Sensation to arrive on the Pacific Coast.

Greater Sensation

Sired by

Great Sensation

who sired world's champion boar at National Swine Show, 1919. Also the world's grand champion boar 1919. His get has won more prizes at the fairs and swine shows this year than any living boar.

NOTICE—To farmers and breeders: We will produce over a thousand high class Durocs next year sired and damed by the best blood lines of the breed. Write us your wants. Satisfaction in every transaction. Prices reasonable.

Gardiner Ranch

Route No. 4, Box 735 Sacramento, Cal.

Experience Has Taught

us that if we make money out of hogs we must have prolific sows bred for quick maturity. They must be of the type producing the highest quality of pork. A careful survey of my herd will convince you that I am breeding the kind you want to breed. I have breeding animals—both sexes—for sale at reasonable prices.

Les McCracken *Ripon, Cal.*

Bred Sow Sale, on farm, Feb. 3rd, 1920

200 Bred Duroc-Jersey

sows and gilts bred for spring litters. All carefully selected from Glenn County herds. They are the kind that will make a profit on any farm. All are priced at exceedingly low prices. Bargains for car lot buyers. Get busy and write or come and see us immediately as they won't last long at the price.

H. P. Slocum and Son

Willows, California

Breeders of Duroc-Jerseys. The Key Herd of the Pacific Coast.

YOUR FUTURE DEPENDS

on your selections now. In Duroc-Jerseys we have some gilts and boars of type, breeding and conformation that we guarantee to satisfy and at reasonable prices. Write for full description.

Greenwood Farms

H. C. Witherow, Mgr. Live Oak, Sutter Co., Cal.

Why Not

get just what you want and need when you buy Duroc-Jerseys?

Orion King Gano is a proven sire of Duroc-Jersey swine—the kind you will eventually buy so why not now? Our prices are reasonable and worth the price.

Donald H. Graham Lancaster, Cal.

Special Notice to Duroc-Jersey Breeders

I leave for the East in January. Several breeders have given me orders to buy bred sows and gilts for them. I will be pleased to purchase for you anything you want. Will personally select them. Write me what you want and the blood lines. I'll tell you just what I pay for them.

Clayton Slocum Willows, Cal.

N.B.—Write me at once

The Stray Dog of Industry

By J. H. Henderson, Jr., President Sacramento Bank

OLD KING SOLOMON said, "A word fitly spoken is like apples of gold in pictures of silver." Your paper has asked me for a financial forecast as it affects the farmer for the coming year. For exact information you might as well ask which way the wind is going to blow next summer. You can't always tell by scientific forecasts which way the financial wind is going to blow. There are too many unknown elements that no mortal can fathom.

How many successful men do you know who are pessimists? There are surprisingly few. Recently I saw a definition of a pessimist as one who had to live with an optimist. But what would you call the man who had to live with a pessimist? When you are inclined to be downhearted, think of the hopeful things you have to be thankful for. Our money has the highest standard of any nation in the world; our bonds are more valuable; our national wealth is greatest; there is less poverty, and the purchasing power of each individual is higher than in any other nation.

The farmer has things to sell. He has a hungry nation to clothe and feed. He is the greatest of all producers. But America is only one nation the American farmer has to feed—the whole world needs our products.

Produce all you can. Buy machinery and tools, even at the prevailing high prices if you need them in order to put in your crop. It is good sound business to do so. You may ask, "But will I be able to sell my products at a profit?" There are several factors that determine prices. One is supply and demand; another is speculation; another is the cost of production, and the other is the ability of the consumer to pay.

We will take them in order. The demand is certainly enormous. The supply is too small under the best conditions. Farm products are most likely to stay up.

Speculation forces prices too high. This should be eliminated as far as possible. Cost of production of a farm depends largely upon labor. Certainly labor has no intention of lowering his wages. This is another incentive toward high prices because of high costs. You cannot be expected to sell at a loss.

The ability of the consumer to pay is the deciding factor in high prices. The American consumer, as already mentioned, is the one most able to pay in the entire world. He is the richest. A large percentage of foreign consumers demand supplies and are able to pay.

High wages, great demand, high cost of production, ready cash purchasers and a certain amount of lamentable but unavoidable speculation all keep prices up. Too high prices will kill any industry. I am not elated at high prices. It is deplorable. But when a farmer spends a large amount for materials and labor he is entitled to expect a high price for his products. That is the natural law of industry.

Although advising farmers to increase immediate production, I also would urge some greatly needed reforms in the business of agriculture. In the recent labor unrest and its kindred agitation, there were only two classes of people considered, labor and the consumer. They quarreled with each other violently with a great ing of fists, and eventu their differences by a which neither was ed. Of course the farme consulted and is being crus between the hammer of labor on one side and the anvil of the general consumer on the other. Labor has its unions for collective bargaining; consumers form their associations for lowering prices. Business men have associations for mutual benefits. I have tried to get bids from various printing houses for printing, and every bid was the same to a cent! Does this show any collective agreements? The farmer must organize for self protection. If he doesn't he will be the stray dog of industry, stealing his living from the doorsteps of society, when he is entitled to the guest chamber.

Therefore I would urge every farmer to join his nearest association, and if there is none near him, to form one.

You ask of the future of the dairy business. Our association is doing a great work for both the dairyman and for the public. We have been attacked, vilified and slandered, but we are still in the ring and are going to stay there.

If by any queer twist of justice and the tortuous course of events, our Associated Dairymen of California should cease to exist, the vultures of the vested interests, hovering like buzzards ready for their intended victims to die, would wax fat on our remains. They would force the price of milk so low to themselves that within a year there would be a great shortage of dairy cattle. Dairymen would be forced to beef their herds. Then prices for dairy products would increase so rapidly that the consuming public would become agitated and would turn in justified wrath upon those buzzards of industry—the food speculator and the vested dairy interests.

I can only urge the dairymen of California to stand firm because their cause is just and for the eventual benefit of both themselves and the average consumer.

Farm Bureau Livestock Auction Sales

By R. N. Davis

THE advance in prices in general and the increased cost of living which became very apparent during 1917-18 made it essential that the livestock farmers receive more for their product.

The high prices of grain brought this fact so plainly before the hog growers of the San Joaquin Valley that they realized they were not receiving as much for their hogs as it cost to grow them. It was apparent that something must be done to relieve this condition or the hog growers would be compelled to divert their efforts to other lines of farming.

This was at a time when our allies were looking to us for large amounts of pork and pork products, saying nothing of our own enormous requirements. It was at this time that the American government was making every effort to increase animal products, so essential for the winning of the war. At this critical moment the Kern County farm bureau conceived the possibility of using the auction sale which has been used so successfully in Australia.

Before these sales could be conducted successfully the cooperation of the packing houses of the state must be secured. At this time only one of the big packing houses had a representative in the valley. Cooperation of the packers was sought and arrangements made for a sale.

Although the first sales were conducted with only a limited number of buyers present they were considered very successful and the auction sale spirit soon spread to the adjoining counties of Kings and Tulare. As soon as other counties began to hold auction sales it was realized that there must be some kind of cooperation between the different counties in order to prevent conflict in sale dates so the different buyers could attend all sales. This, of course, could best be accomplished by an organization, the manager of which should be directly in charge of all the sales in the different counties.

The natural result was the organization of the California Farm Bureau Marketing Association which was perfected and the association became operative on November 1, 1918.

At the time of its organization the association consisted of the farm

bureaus of Tulare, Kings and Kern Counties. The board of directors was composed of one director from each of the three county farm bureaus. D. H. Bitner, a progressive farmer of Kern County and a strong believer in cooperation among the farmers, was selected as manager.

The sales continued very satisfactory and resulted in the addition of other counties to the association. The present membership of the association includes seven San Joaquin Valley counties, viz: Kern, Tulare, Kings, Fresno, Madera, Merced and Stanislaus.

Although there were only three counties in the association for three months after its organization and some of the counties have only been members for a short time, the association during the first year of its existence conducted 155 sales at which were sold 526 carloads of hogs, or a total of 42,000 head, which compose a gross weight of 8,500,000 pounds of pork which brought $1,500,000. There were 4,300 different consignments during the year. The manager considers $100,000 a very conservative estimate of the amount received by these consignors above what they would have received had they marketed their hogs otherwise than through the association.

In addition to hogs there were over $19,000 worth of cattle and $3,000 worth of miscellaneous products marketed through the association, a result which was very satisfactory.

The reader will note by the number of consignments given above that a large number of small consignments were made. A large per cent of the total number of hogs was made up of entries consisting of from one to 20 head. However, a number of large growers sell through the association and are convinced that they receive better prices for their hogs than they would if they had shipped direct to the packing houses, this because of competition between the different buyers.

The packers state that the hogs cost them more when purchased through the auction sales but they are getting a better quality of hogs and prefer to pay a better price and get a better product.

A great deal of credit is due packers of the state for the success of these sales. Without their cooperation the sales would be impossible. It is very gratifying to know that all the principal packers of the state have representatives at these sales.

Although only a limited number of cattle have been marketed through the association the results are such as to demonstrate that the farm bureau auction sales would be as valuable to the cattle growers as they have been to the hog growers, both in price and improvement in quality of product. Therefore why should not cattlemen and other stockmen get together and profit by this wonderful demonstration of cooperative marketing?

Freeman Heifer Breaks State Record

The California record for 365 day milk production in the junior two year old class has just been broken by Belle Faskie De Kol Witkop, owned by E. E. Freeman, Modesto. It will be remembered that this great heifer at freshening time made an official record of 24.86 pounds butter from 479.5 pounds milk in seven days, and 98.59 pounds butter from 2,061.2 pounds milk in 30 days. In seven days, eight months after calving, she made 16.29 pounds butter from 433.2 pounds milk, her butter record falling only .2 of one pound short of the state record at that time. She still ranks third in class in this division, her record having been exceeded only by Aralia De Kol 3d and Miss Aaggie Acme Burke. On December 10 she completed her full year's work with a total of 810.28 pounds butter from 20,373.4 pounds milk, exceeding by 212.9 pounds the former state record held by Madrigal Mooike 2nd. This heifer won $70 in association prize money on her seven and 30 day records and should be well up to the top in the prize lists for eight months after calving and yearly production. A most pleasing feature of her record is the fact that she carried a calf over seven months of the time, and she is due to freshen next as a junior three year old. She is sired by Sir Inka Witkop who is by the same sire as Groveland Inka Netherland, 16,640.4 pounds milk and 832.75 pounds butter in one year, and is out of Belle Faskie Hengerveld De Kol 2nd, the 25 pound cow that was grand champion at California state fair in 1918. Her sire, Sir Inka Witkop, is out of a granddaughter of Woodland Dairy Maid's Artis, sire of the dam of Adirondac Wietske Dairy Maid, the 41.02 pound cow developed by Bridgford Company, present holder of the California records for butter in seven and 30 days. This splendid heifer ranks fully as high as an individual as she does in producing ability, possessing good size, straight top, a broad, square rear end, exceptional depth of body, and a perfect udder of fine texture and balance. She is easily one of the outstanding two year olds of the breed in the West, judged from any viewpoint.

A full aged half sister to the record making heifer, by the same sire, recently completed a yearly record of 21,558 pounds milk and 812 pounds butter in Mr. Freeman's herd. This cow, Vina Pietertje Hengerveld De Kol 2nd, is likewise a high class individual of great dairy capacity.

Still another great cow in the Freeman herd, Julia Clothilde of Sleepy Hollow, is just finishing a yearly record that will go close to 24,000 pounds milk and 1,000 pounds butter. She is a daughter of the well known sire Brom Bones. These records are the most substantial justification of Mr. Freeman's judgment in selecting foundation animals. Without large capital for initial investment he selected females bred along substantial lines, but paid particular attention to size and good type. As a result he has one of the most attractive small herds in the state from the standpoint of individuality, and the production records speak for themselves. The bull end of his herd is fully up to the standard of his females, the herd sire being Segis Pontiac De Kol Dutch, a son of Segis Pontiac De Kol Burke and Miss Dutch, a 30 pound 1,025 pound yearly record daughter of the 1,008 pound cow Miss Blaney. He already has a very choice lot of young daughters out of the top notch cows that Mr. Freeman is developing.

COOPERATIVE LIVESTOCK SHIPPERS

Over 300 cooperative livestock shipping delegates, representing 21 states and four Canadian provinces, assembled in Chicago December 3-4 and unanimously perfected a permanent National Federation of Cooperative Livestock Shippers. The following states in the order named were represented by the largest delegations: Iowa, Michigan, Indiana, Illinois, Wisconsin, South Dakota, Minnesota. Other states represented were: Nebraska, Ohio, Kansas, Oklahoma, Washington, Colorado, North Dakota, Missouri, Tennessee, New York, California, Kentucky, Louisiana, Pennsylvania and Canada.

Knute Espe, Ames, Iowa, was elected president; C. E. Compson, Remus, Michigan, vice-president; John Miller, Galva, Illinois, treasurer; Selby E. Peterson, Waconia, Minnesota, acting secretary; Earl J. Trosper, 906 Royal Insurance Bldg., Chicago, organizing secretary; C. Hoover, Longmount, Colorado, T. M. Patterson, Mississippi agricultural college, A. S. Anderson, Beresford, South Dakota, C. H. Gustafson, Omaha, Nebraska, H. M. Phillips, Palmyra, Missouri, J. F. Larson, Ellsworth, Wisconsin, M. E. Sherman, Kendallville, Indiana, directors.

The objects of this federation in a general way are:

To encourage better and more economical methods in the production and distribution of livestock and livestock products; to promote cooperative education, and to encourage the organization of cooperative livestock marketing organizations; to develop uniformity in the plan of organization and method of operating of local live-

Live Stock News Notes

Fred Gatewood on January 10 will sell, in Fresno, 55 head of strictly big type Poland Chinas with such blood lines as Big Orange, Big Orphan and Big Joe. Twenty-five of the sows and gilts will be bred to Fresno Boy, the first prize senior boar pig at the 1919 state fair and junior champion at the Fresno fair. Mr. Gatewood has practically decided to retain this boar and show him next year although he has received several excellent offers to sell him at private treaty. In the sale there will be sold 30 sow pigs which will afford the breeders the opportunity of securing animals for a fall sale. Mr. Gatewood states that every animal in the sale is of strictly big type breeding and of as good blood lines as the breed contains.

J. F. Lehman, Poland China breeder, Lodi, is securing a boar by Surprise Prospect, premier sire of Wilverdell Farms, St. Joseph, Missouri, for mating with his young gilts, a number of which were seen at the shows this year and were consistent winners for him. Recent sales include a boar to Hunt Bros. Packing Company, Linden; one to E. W. McClelland, San Francisco, and the junior champion boar at the Stockton fair to J. L. Blossom, Stockton. A sow pig went to A. M. Mann, Ukiah.

C. J. Gilbert, breeder of Hampshire swine at Lancaster, reports things flourishing. It will be recalled that Mr. Gilbert bought the outstanding first prize junior yearling boar at Los Angeles Livestock Show, Black Beauty, shown by Roy E. Fisher, Lincoln, Nebraska. This fine son of Young Senator was made grand champion at San Francisco. Mr. Gilbert reports a fine line of sows safely bred to this great boar since early November. The older boar, The Harvester Again, was grand champion at Portland 1919 while the favorite brood sow Wavelet is to be remembered as the Riverside grand champion 1919 and reserve grand champion at Los Angeles. Mr. Gilbert has opened offices in the Bradbury Building, Los Angeles, as secretary of the local association, as well as in the interest of the Hampshire Record Association.

In the consignment sale of Shorthorns held at Portland during the Pacific International Livestock Exposition the second highest priced bull sold was Silver Knight, a junior yearling purchased by R. C. Bennett of Milsall, Montana, for $2,600. California breeders will be interested to know that the dam of Silver Knight was Mildred's Type sired by Cumberland's Type and out of Mildred of Greeley—thus making her a full sister of Sir Type, the bull at the head of the herd of William Bond of Newark. Sir Type is regarded a high class sire.

Donald H. Graham, Duroc-Jersey breeder of Lancaster, has recently purchased through E. J. Barker of Thorntontown, Indiana, who judged Durocs at the Los Angeles Livestock Show, a junior boar pig sired by American Orion King, a son of Orion Cherry King, and out of a sow by American Top Col. Mr. Graham has also secured a foundation flock of Hampshire sheep from Joe Levy of the Calla Grove Farm, Manteca.

H. C. Witherow, manager of the Greenwood herd of Duroc-Jerseys, Live Oak, reports having sold a splendid young boar sired by Johnson's Defender Jr. to H. S. Johns of Shavista Ranch, McArthur, Shasta County. Mr. Witherow also has made deliveries as follows: Bred gilt to Edw. R. Aspen, Wasco; boar to Geo. M. Sparks & Company, Ingomar; bred gilt to C. H. Hartwig, Yuba City; two sow pigs to Dr. R. S. Christman, Yuba City. Mr. Witherow will consign a few select sows to the association sale to be held at Davis.

John A. Bunting, proprietor of the Mission herd of Hereford[illegible]'s sale of the senior [illegible]lec, sired by New Era [illegible] of Pearl Ranier, to Ed Brow[illegible]ue Miller & Lux Company. Alec was first in class at the recent state fair and second in class at the San Francisco show. The price paid was $2,250 and Brown stated that after a visit to Eastern herds he was unable to find a better value.

H. M. Barngrover, who owns the Veramont herd of Herefords, has purchased a heifer calf sired by the famous bull Beau Blanchard owned by Jesse Engle & Son, Sheridan, Missouri. The calf is a full sister to Bell Blanchard 61st, second prize two year old at the last American Royal and is a half sister to the long list of famous sons and daughters of Beau Blanchard, including Beau Blanchard 76th, the bull for which J. I. Cazier & Sons of Wells, Nevada, paid $10,000.

Four carloads of dairy cows have left the Salt River Valley of Arizona for Havana, Cuba, according to Dr. J. P. Jacks, extension veterinarian. Several hundred have already been shipped and it is expected two cars will follow to Cuba as long as the dairy stock is offered for sale.

Manager Lovell of the Blackhawk Ranch, Diablo, Contra Costa County, reports having sold the three year old Shire stallion, Blackhawk Forest King, sired by Blymhill Forester and out of Witchford Darby, to Henry Moore of Pleasanton; Blackhawk Mystery, a four year old son of Anwick Arthur, to N. S. Boone of Dublin, and Blackhawk Ring O Bells, a four year old son Anwick Arthur, to Donahue & Son of Alamo. Lovell states that the demand for draft stallions of quality is more active now than at any time during the past few years.

GLENN COUNTY POLAND BREEDERS GUARANTY SALE

The Glenn County Poland China Breeders Association, one of the many livestock organizations that are putting that county to the front as a source of high class pure bred livestock, will sponsor a sale of bred sows, gilts and boars to be held at the Glenn County fair grounds, Orland, January 13. The sale will consist of around 65 head that have been selected from the top herds of that county and advance information is to the effect that the quality of the offering will be high. Ord L. Leachman of Sacramento is in charge of the sale.

REPORT OF TAGUS RANCH SALE

The Merritt-Bowers Company disposed of more than $25,000 worth of livestock and farm implements in the two day sale at the Tagus Ranch near Tulare, December 16 and 17, and, had the days been a little longer, a much larger list of sales would have been recorded.

The first day of the sale, which was handled by Ord L. Leachman, the livestock auctioneer of Sacramento, was devoted to selling $12,500 worth of implements, horses and mules. It was dark before the pure bred horses were reached, only two registered Shire mares going through the ring. These brought $335 and $330 from H. J. Stokes of Visalia and R. K. Smith of Clovis respectively. The work horses and unbroken horses averaged $150. The ten spans of mules averaged $255.50, the tops being the four show mules that the Merritt-Bowers Company had over the fall circuit, the sor

Berglund's Duroc-Jersey Sale

Announcing First Annual Bred Sow Sale

California Duroc-Jersey Breeders Association

University Farm, Davis

Wednesday, January Fourteenth

40 — High Class Bred Sows and Gilts — 40

This sale has been planned to afford established breeders and beginners an opportunity to select foundation stock that represents the best that is being produced in the top herds of California.

Every animal has been selected with great care and is guaranteed to be a breeder. The offering is right individually and the bloodlines are the best available.

THE DUROC FILLS EVERY REQUIREMENT OF THE PRACTICAL HOG RAISER. Durocs are prolific, Durocs mature rapidly, Durocs feed economically, Durocs breed uniformity in size, type, conformation and color, Durocs are profitable, that is why Durocs outnumber any other breed.

Watch the Cultivator for detailed announcement. PLAN TO ATTEND THIS SALE. Write for the Catalogue

rel wheelers going for $670 to E. D. McSweeney of El Monte, and the black leaders to Joe Ross of Stratford for $630. Fifteen suckling mules went for $30 each.

The Shorthorn sale, which occupied the second day, brought an average of $247 for the 50 females and $220 for the five bulls. It was just about dark when the bulls were sold and the buying was slow on these, as a result of which the Merritt-Bowers Company decided to hold a bull sale in the spring when the trade would be calling for herd sires. The six unregistered Hereford bulls averaged $153.

The cattle offering was presented in breeding condition, as a result of which the purchasers reaped the benefit on values, for in the lot were any number that would have sold at a considerable advance in price had they been put up in what is usually termed sale condition. The Merritt-Bowers Company, however, was well pleased with the sale.

T. R. Carlyle of Sanger, one of the heaviest buyers, topped the sale with $500 to [illegible]en, a big cow with red bull calf at foot. J. A. Knight of Tipton was a heavy buyer. Thomas Harrison and Dr. J. J. Summerfield made the trip from Santa Rosa to take home several head, and Turney Brothers of Strathmore bought a number.

Announcement was made that another two day sale would be held March 16 and 17.

The Shorthorn sale list follows:

Females

Heard's Queen (with red bull calf, T. R. Carlyle, Sanger, $500.
La Belle Phoenix, Dr. J. J. Summerfield, Santa Rosa, $210.
Bonn Boy's Milkmaid, J. A. Knight, Tipton, $275.
Milkmaid (with red heifer calf), Thos. Harrison, Santa Rosa, $410.
Belle Heard, T. R. Carlyle, $245.
Beechwood Bloom, Turney Bros., Strathmore, $260.
Bewitching Harriett, Turney Bros., $250.
Creamy Nectarine (with roan heifer calf), Jesse C. Werly, Raymond, $210.
Bluebell Mineola, T. R. Carlyle, $245.
Narcissus (with red bull calf by Knight Avon 2nd), Dr. J. J. Summerfield, $245.
Bonnie Dairy Avon, T. R. Carlyle, $230.
Countess Jr., Thos. Harrison, $260.
Blossoming Lady Fair, J. A. Knight, $225.
Native Flower, T. R. Carlyle, $305.

FIRST ANNUAL GUARANTY SALE

Glenn County Poland China Breeders Association

Orland, Cal., Tuesday, January 13th. (Glenn County Fair Grounds)

65 Selected Bred Sows, Gilts and Boars

For the initial sale the following herds have been drawn upon to furnish an offering in keeping with the established quality of Glenn County Livestock:

R. J. Yates
R. M. Rankin
Penfield Bros.
V. H. Warnock
J. A. Miller
J. K. Burnett
M. H. Summers
Adam Lachenmeyer
J. E. Faltings
Ferguson & McKaig
Chas. Templeton
W. A. Ort
Mrs. C. J. Lathrop

Every animal listed represents the most popular and proven blood lines known to produce strictly big type Poland Chinas.
Watch this paper for further announcements. For catalogs address

Ord L. Leachman, Auctioneer and Sale Manager

1111 Seventh Street Sacramento, California

Prince Walker Cornucopia

The Highest Record Son of Prince Gelsche Walker

His dam ALBA SADIE CORNUCOPIA CREETA has just completed official records of 36.26 pounds butter from 516.7 pounds milk in seven days. Her previous records were as follows:

At seven years—
Milk 338 days 13,849.40
Butter 866.23
At six years—
Butter seven days 34.13
Milk 532.40
At five years—
Butter seven days 28.85

She is a daughter of Sir Sadie Cornucopia, son of the first 30 pound cow, Sadie Vale Concordia.
Over 60 of our best females are bred to PRINCE WALKER CORNUCOPIA, and he will be given the fullest opportunity in this herd. Put one of his young sons at the head of your herd.

Better Percherons

In his annual report made to the Percheron Society of America President White said:

"I am convinced that the time has come when American breeders must give close attention to the blood lines of their Percherons if they are to make progress in the production of better Percherons, particularly those which will transmit their own good qualities with a high degree of certainty to their progeny. It is better to produce two good ones than 20 of the mediocre kind. Castration of the inferior stallions with unsparing hand must occur if the average of our breed is to be improved. The importation of Percherons, in my opinion, is a thing of the past. Some no doubt will be brought over, but not many. With this in mind it is the desire of the society to do everything possible to encourage the American breeder and the dealer in American bred Percherons. I believe that the interests of the breed can best be served by the development of some great breeders shows in connection with state fairs and I hope that plans to this end may be worked out during the coming year."

Secretary Wayne Dinsmore in his report said: "We recorded more American bred Percherons during the last fiscal year than in any previous year except 1917. Registrations amounted to 3,515 American bred stallions, 5,615 American bred mares, 19 imported stallions and two imported mares, making a total of 9,130 American bred animals and 21 imported animals, or a grand total of 9,151. Imported animals were all imported in past years and recorded in minor associations, but were registered in the Percheron Society in order to permit of the registration of their produce. A year ago the registration of stallions was 25 per cent less than the registration of mares, but this year the registration of stallions fell short of mares by 2,100, or 37 per cent less. This proves conclusively that while Percheron breeding is increasing slowly but surely owners are, with wisdom, castrating the inferior stallions, and this is as it should be. During the past year the society has issued 8,764 transfer certificates, transferred 324 more animals at the time their pedigrees were rewritten at the request of buyers, and 1,038 colts which were sold prior to registration, making a total of 10,126 animals which were transferred on our records during the past fiscal year. This is a decrease of about ten per cent as compared with last year; but the steadily growing interest in Percherons is well shown by an analysis made about August 1, which revealed the fact that no less than 4,831 men not yet members of the Percheron Society of America had transferred to their ownership the past three years. This shows many states ha[ve] and are back their money.

"Illinois [has] the largest number of Percherons during the past year, with a total 1,349 head purchased by breeders in the state. Iowa came second with 1,224 and Canada third with purchases of 742 head bought in the United States.

"Forty-six Percherons were exported to Great Britain during the last fiscal year and since November 1 17 head went to Japan. These shipments promise to be but forerunners of more extensive purchases."

Directors elected to serve for the next three years were as follows: U. L. Burdick, Williston, North Dakota; C. F. Curtiss, Ames, Iowa; W S. Dunham, Wayne, Illinois, and Arthur Colegrove, Girard, Kansas. E. B White of Leesburg, Virginia, was re-elected president; U. L. Burdick of Williston, North Dakota, vice-president; C. N. Stanton, treasurer, and Wayne Dinsmore continues as secretary.

Venezuelan Salt Meat Finds Market in Trinidad

In meeting the higher cost of living problem the people of Trinidad find considerable relief in the plentiful supplies of cattle on the llanos of the neighboring country of Venezuela. The retail price of fresh beef or veal in the local market is 18 cents per pound, which is not over two or three cents higher per pound than the prewar price.

An interesting new method, however, has lately been put into effect for providing the people of Trinidad with meat from Venezuela, taken from cattle slaughtered under sanitary conditions before leaving that country and while in superior condition, and boning and salting the meat, and packing in such a way that it reaches Trinidad still full of fat and juice, and in a most tender and palatable condition, so that it meets with a very quick and ready sale at 16 cents per pound, two cents per pound less than the price for fresh meat, but the real economy being very much greater, as the weight per pound represents all solid meat, whereas the fresh meat sold in the local markets contains a large proportion of bone and other wastes. The large estates in Trinidad are especially anxious to get this meat, as it keeps in condition under conditions of rural transit and tropical heat much better than the ordinary fresh meat from Port of Spain.

Only oxen are at present used for this purpose. They are brought from the llanos into large savannah inclosures about one mile from Maturin and pastured on luxuriant grass until they weigh 1,000 pounds or over, and then slaughtered. The carcasses are then cut into four quarters, temporarily salted, and taken to another department where they are hung on iron bars and allowed to drip. The day following the meat is cut away in slices from the bones. These bones are sold on the spot to local peasants for six cents per pound. The heavy side portions of fat are also removed and sold to a local soap factory for 12 cents per pound. The hides are shipped to Port of Spain, where they are sold to local tanneries and fetch from 25 to 26 cents per pound.

The meat, after having been sliced from the bones, is thoroughly salted about 25 bags of salt, each weighing about 100 pounds, being used on the meat portions of about every 30 oxen slaughtered. The meat is then bagged (100 pounds each) and shipped by boat about four days from the time it is first salted. The beef arrives at Port of Spain practically fresh but is re salted after arrival and is now in condition so that it can be readily preserved for several months.

The Cattle Situation

The cattle situation in California is not very complex at the present time; prices are good for beef; grass is sure but will be late; the banks are full of money. Now if some way for a cow man to get it can be found!

The feeder movement, with the exception of a few lots of Southern and Central Arizona cows, is over. The undelivered Northern Arizonas will remain undelivered this year as lack of cars and heavy snows ran deliveries short 40 per cent. The only movement now in feeders is more or less local and concerns the Inyo County cattle which fattened and those which did not.

The cows, principally aged, being shipped in are being priced on a basis of $50 to $60 Los Angeles or $5 higher in the San Joaquin. The steers which sold brought seven cents for yearlings up and eight cents up for twos and threes f. o. b. shipping points. By the head the Northern Arizonas ran better than $80 for twos up and the yearlings $45 up. Cows sold at six and seven, or from $50 to $70 a head for Arizona. Utahs were scarce and averaged slightly better. Nevadas averaged eight and nine cents for steers and seven for cows, but weighed heavier.

At the present time there are abou

8000 cattle in the Globe yards owned by various packers mostly, but this is only a few weeks supply for the Los Angeles market alone. Not over 4,000 head of beef can be expected from the Bishop and Independence country; nothing from Utah or Nevada as affecting Southern California; a very limited supply in Phoenix or Imperial; few cattle are being fed in the San Joaquin; practically none on the Coast south of Betteravia. Kern County has some beef in the making, as has Madera County, but few considering normal numbers in ordinary years.

It is rumored that two cars of fancy steers cost San Diego 13 cents recently and that Imperial contracts have been closed on a 13 cent steer basis with stronger tendencies.

The summing up of the situation is that anything fat before April or May will command high prices and the late rains preclude the possibility of any grass beef before May or June or probably later.

The [illegible] market needs will be in the [illegible] months at least 60,000 cattle, as the people flocking in have increased demand. The cattle in sight, figuring roughly, to fill this demand hardly number 34,000 head, so our good people of California can figure to eat many old dairy cows this spring, as they will be in demand if some unknown beef supply doesn't show up.

The coast and vicinity kills about 750,000 a year and considering the apparent shortage on the ranges in all the states except Arizona, it's difficult to tell where the cattle will come from. The slaughter and forced sacrifice of breeding cows, three years of drouth, the low prices paid by the packers, and the difficulty in securing money for cattle ranch purposes has hit production hard.

California is a third short on normal range cattle supply. Arizona is short both on number shipped this year and its calf crop. Utah is short and also Nevada, Montana, and Wyoming and the entire West has suffered from drouth and is now losing again from blizzards and heavy snows.

As for figuring prices any cow man of discernment and experience knows better than to attempt it, as the packers and a very few men among them on this coast will tell us just what price we will get when the time comes.

We hope it will be enough to recompense us for the heavy expense and hardships endured, and for a number of us this is the last try to stay in a game in which the cards are stacked against the cattle producer and feeder. There are some 60,000 less cattle on feed today in this part of the Southwest than the normal average of the past four years.

Another rotten year with rightful fair profits crowding the Big Five's coffers and dividends, instead of going to the producer and a part to the feeder, will still further diminish the number of fools who stay in such a game, among others, yours truly.—A. L. Spellmeyer.

Under the present condition of the cattle business no one can afford carelessness in utilizing the roughage on the premises. To make every bit count to its fullest extent the grain, fodder and hay should be ground and fed out as a measured ration. A mill might be purchased as a community affair and all the feeding stuffs in the neighborhood can be stowed away for winter in the most palatable and cheapest condition. No one should wail about high priced feed until this is first done, for the saving will be an equalizer on the amount that must further be paid out for feed. Waste is gross extravagance in these fiery times.

You can generally tell from the expression of a horse's face whether or not he wants you to stroke his nose. There is plenty of expression in a horse's face. He does not grin as you do, but his eyes are clearly kindly or the reverse; he expresses a great deal by the pose of his ears; and those who know horses well can read their faces as you read a man's. The Almighty made nothing in the way of benignity that can exceed the comfortable, friendly, willing, kindly look on the face of a well-fed, well-treated and naturally good-dispositioned horse.—Boston Transcript.

TREATMENT FOR GOAT LICE

Goat lice fortunately are always closely associated with the goats. They are not known to breed on other animals nor will they live for more than a few days apart from the host. This, of course, makes their destruction comparatively easy.

Dipping in arsenical solution or nicotine sulphate is probably the best procedure as it destroys both the sucking and biting lice. However, where the sucking lice are not very abundant the breeders may prefer to treat the goats by the dust method. It has been found by the bureau of entomology that these lice can be destroyed completely with a single application of a whitish powder known as sodium fluoride. About one-fifth of an ounce per animal will accomplish complete eradication, killing both the lice and their eggs. For the treatment of large herds a high percentage of destruction can be secured by blowing the sodium fluoride onto the goats as they go through a chute. A hand dust gun operated on each side of the chute is fairly satisfactory for this work. At this rate it would take about one and one-fourth pounds of sodium fluoride per hundred goats and the cost of this material bought in large quantities would be about 30 cents per pound.

HOW OUR MILK IS TESTED

Estimates made by the United States department of agriculture show how the 87,905,000,000 pounds of milk produced in the United States annually are utilized. Forty-four and one-half per cent is used as fresh milk for human food, while 36 per cent of the gross supply is converted into butter and 4.5 per cent is made into cheese; another 4.5 per cent is transformed into canned milk, 4 per cent is used in ice cream making, 4 per cent is used in feeding calves and hogs on the farms of origin, and 2.5 per cent is lost in shrinkage and other waste of the dairying industry.

BUYING SHROPSHIRES FOR BUTTE CITY RANCH

While attending the International Show, W. S. Guilford made several additions to the Shropshire flock maintained at the Butte City Ranch. A ram lamb, said to have been the pick of the University of Wisconsin flock, sired by a Renk ram and out of a Broughton ewe, headed the purchase. Guilford also made selections from the Broughton, Renk and McKerrow flocks. The Butte City Ranch is gaining a fine reputation as a source of good Shropshires and present plans contemplate an extensive show circuit next year. Before returning to California Guilford will visit a number of New York flocks.

H. G. Ball, an extensive oil operator in the Taft and Coalinga fields, has purchased a large ranch near Tulare and will raise pure bred Holsteins and Poland Chinas. To start off his herds he has purchased a senior two year old cow, Lady Zenobia 3rd, and Jennie Wren Edith Pride from Walter Mitchell of Visalia and Miss Model C, a Poland China sow from A. J. Elliott who last year made a thousand dollars on the animal. The sow was bought at the Tulare County Breeders sale October 21 for $300 and Mr. Ball already has sold two of the unborn litter, a boar pig and a sow for $100 each.

Ruby Pietertje of Forest Hill 2nd, the new California record senior four year old owned by W. J. Higdon, Tulare, is keeping up her wonderful production on 30 day test. At the end of 20 days she has to her credit 2,005 pounds milk and 87.3 pounds butter fat and is now milking as high as 115 pounds per day and making right around 4.4 pounds of fat per day.

Total holdings of hides and skins for the month of October were 40,678,536, according to reports received by the bureau of markets from packers, dealers, importers and tanners. This is a net increase of 3,308,558 over September.

Manufacturers used about 69,000,000 pounds of wool, grease equivalent, in October, 1919, the greatest amount consumed in any one month since May, 1918, when the wool textile industries' capacity was taxed by the war's demand.

Get More Milk

Maximum milk production depends upon the ability of your cows' digestive organs to produce thorough assimilation of feed. Keep them in tip-top productive condition. With winter stabling and feeding they need help to resist disease and maintain normal milk yield. All animals need help at this time.

Dr. LeGear's Stock Powders

supply the needed laxative elements, the tonics and blood purifiers so necessary to keep your stock healthy. Insure healthy offspring, full yield from milkers; get rapid gain on packer stuff and keep work stock in first-class trim.

Get Dr. LeGear's Stock Powders at your dealers today. Your dealer is authorized to refund your money if you are not satisfied with results.

Sold by 40,000 dealers—never by peddlers. Ask your dealer for them today.

M., 3rd Floor Grant Bldg., Los Angeles, California.

Great for Udder Troubles

This liberal 60c package of soothing, healing ointment will keep your cows' udders soft, smooth and free from all conditions that make milking unpleasant and reduce the milk yield.

Bag Balm is known and used wherever cows are raised. It is perfect insurance against losses resulting from Caked Bag, Cow Pox, Chapping, Inflammation, Chafing, etc. It penetrates and heals quickly, restoring the injured tissues. Cows give milk freely and in full quantity from healthy udders.

Druggists, feed dealers and general stores sell Bag Balm. Free booklet, "Dairy Wrinkles," sent on request.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Boulevard, Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

Unsigned communications receive no attention.

Lung Trouble

Have a cow that about six weeks ago had what the veterinarian called pleurisy on the verge of pneumonia and treated her for it by giving medicine and rubbing liniment on throat and over lungs. In a few days the fever was all gone but she was left with a bad cough which she still has. She was fed light of grain and hay as the doctor ordered and blanketed and well cared for. Feed has been increased and she seems to have improved except for the cough and some difficulty in breathing. She is always hungry and eats heartily and chews her cud. Eyes are bright and nose moist. When lying down she stretches her head straight out resting on her chin, grits her teeth and drools from the mouth. Would like to know how to relieve the cough and difficult breathing. — Subscriber, San Diego County.

This case is a little difficult to diagnose without seeing it. The drooling would lead one to think there was something wrong in the mouth. Examine it carefully for a thorn or splinter, way back to the throat. For the cough get a pint bottle of syrup of cocillana compound of your druggist and give two tablespoons at a dose three or four times a day. Gritting the teeth might be caused by bowel trouble or from something in the mouth as mentioned above. If the bowels are not moving naturally give a dose of salts or oil and turpentine. If you use the salts give a pound of epsom salts and half a pound of common salt dissolved in two quarts of water. Give at one dose. If you use oil give a quart of raw linseed oil and two ounces of turpentine.

Bladder Trouble

I have a cow that needs a veterinarian's attention but as there is none here will the Cultivator kindly give me your advice. She walks with her back slightly arched and tail out as though trying to urinate wihch in fact she does quite frequently in small amounts but walks that way all the time. She is in fair condition and seems to have no other trouble. She has been in this condition about two months.—Subscriber, Los Olivos.

Get one ounce of iodide of potash and dissolve it in half a pint of water. Give a tablespoon of the solution twice a day. Also get five pounds of ground flaxseed; the kind that has the oil in. Twice a day put a handful of it in a clean bucket and pour on it one gallon of boiling water. When cold fill the bucket with cold water and let the cow drink it. That is good to soothe the urinary passages. When milking buckle a strap around the body just in front of the udder. That will keep her from arching her back and annoying you while milking.

Sow Not Breeding

Can anything be done to get a sow with pig? I have a fine registered Berkshire that has had two litters of pigs and since has been bred several times but continues coming in heat.—Subscriber, Imperial.

She may be too fat. If she is an especially fine one and you are anxious to keep her try feeding her lightly and reduce her flesh. You might also put ten drops of the tincture of iron in her feed twice a day. Skip two or three periods and try her again.

Skin Disease and Worms

We have a mare that for two winters has broken out with little sores all over her head and neck and some on the body. She does not rub so we think it does not itch. She also has worms. What would you advise doing for her?—Subscriber, St. Helena.

For the skin trouble get a pint of Fowler's solution of arsenic and give her a tablespoon of it on the feed twice a day. Feed lightly and give laxative feed. Clipping and grooming well helps to clear up the skin. For the worms mix one pound of fresh wood ashes with four pounds of common salt and give a tablespoon of the mixture in the feed twice a day.

Good Feeding Does It

By Jean A. Koethen

VERY few all-round poultry people are faddists. Some may emphasize one phase of poultry husbandry and some another, but when all's said and done they all realize that Biddy is a many sided creature. She must be the right sort of hen, and she must also have the right kind of feed and the right house to live in. Not only is she a prism, reflecting in infinite variety the details of care and management of which she is the object but she is one of the most temperamental of all living creatures and utterly dependent on her daily environment for the contentment which is with her the first factor in production.

I had almost said it takes a woman to understand her. Certainly no one understands her quite as readily as a woman, and we look to women poultry keepers for those niceties of care and feeding which mere man does not always compass.

Mrs. F. C. Reineking of Inglewood has cared for 2,000 hens for a year or more with no help but that of her 14 year old son. If she had not followed a carefully thought out system the work would have been impossibly heavy, but she loves her hens and she knows how to keep them comfortable. Moreover, she is a "good provider" and believes that the secret of consistent production is good steady feeding the year round.

No-Yard House
However, the upper photo shows provision for outside runs if desired.

An Adaptable House

With her husband's assistance Mrs. Reineking has worked out a plan of housing which is slightly different from that generally followed. The long house shown in the cut is made up of sections 16 by 20, each of which holds from 80 to 85 layers. This allows practically four square feet of floor space to each hen, which is ample room for hens that are kept in close confinement without yards. When I visited her the hens in this house were all confined, but another house built on the same plan was provided with 30 foot runs. Mrs. Reineking is inclined to prefer giving the hens some yard room when it is convenient but does not consider it either necessary or important for the hens to be out of doors. Given plenty of room inside, with scratching litter and clean roosting platforms, and the perennial supply of fresh air furnished by the open front and the doors between sections, they can be comfortable inside in any weather.

An unusual feature of this house is the nest boxes. They are under the front of the roosting platform, but instead of the regulation nest just large enough for a single hen they consist of two long boxes each one of which will hold half a dozen hens. This does away with danger of the hens crowding one another on the same nest and makes cleaning easier.

Each section of the long house is provided with a hopper holding 100 pounds of mash as well as with mash troughs for the hens. Water is supplied by a drip system to the galvanized iron troughs on the little platform before each section. As the hens can reach the water only through the slatted fence it is always free from filth.

A Good Mash Formula

The mash used by Mrs. Reineking contains three different kinds of protein, the meat and vegetable meals amounting to 22 per cent of the whole. It is mixed by the following formula: Three parts bran (by weight) two parts shorts, one part beef scrap or meat meal, one part feed meal (corn meal), one part barley meal, one-half part soy bean meal, one-half part oil cake meal, one-tenth part charcoal and five pounds salt to 900 pounds mash.

The scratch grain used with this mash consists of one-half sprouted barley, one-fourth milo and one-fourth wheat. Barley is never fed without sprouting and is always fed with the other grains. Possibly it is because of this limited use of barley and the fact that wheat is always part of the ration that Mrs. Reineking's hatches have been uniformly good. Last year when most poultrymen complained of poor fertility and hatchability her machines averaged 85 per cent.

Green feed is fed at noon and a wet mash moistened with semi-solid buttermilk in the morning. This makes four forms of protein the hens receive: beef scrap, oil cake meal, soy bean meal and buttermilk. Is it any wonder they lay?

First Feed for Chicks

The chicks on this poultry ranch receive the same generous feeding as the hens. For three days after they are out of the shell they are allowed to lie quiet under the hover without food. The morning of the fourth day eggs from the incubator are boiled hard, one egg being allowed for each 100 chicks. These eggs are chopped with several times their own bulk of steel cut oats, and are fed early in the morning and about two o'clock in the afternoon. At ten o'clock and just before bed time a mixed feed consisting of equal parts steel cut oats, steel cut wheat and fine cracked corn, with a little fine milo, is scattered on the sand. The chicks are kept on this ration of hard boiled egg and fine cut grains for a week, when the egg is gradually diminished and its place taken by the dry mash which is first

Get More Eggs; Save Feed

Sky-high prices for eggs this winter will make big profits for those who know how and what grain mixtures to feed. Improper methods mean big loss. Prof. T. E. Quisenberry made a thousand hens in the American Egg Laying Contest lay 200 to 304 eggs each in a year. Another big flock cleared for him $6.15 per hen in nine months. His methods are explained in a new bulletin, "How to Get More Eggs and Save Feed." Get this free bulletin by writing Quisenberry today addressing care American Poultry School, Dept. 1412, Kansas City, Mo

given when they are one week old. It consists of two parts bran, two parts shorts, two parts barley meal, one-half part corn meal and one part meat meal. The grain ration is continued till the chicks are eight woeks old and the mash till they are four months old. At eight weeks the finely cut grains are exchanged for whole grain and at four months the pullets are given the laying mash.

When I was there, the 19th of November, Mrs. Reineking had already 1,500 eggs in her incubators and was preparing to welcome her first hatch on December 4. "I do not care about starting the machines so early," she explained, "but my customers will have them. "In anticipation of an unusual demand she is planning to run 12 more machines than last season and to look after them all herself, with the help of a man for the outside work.

Poultry Queries

Conducted by J. A. Koethen

Bronchitis

My Rhode Island Reds appear to have great difficulty in breathing. There is a slight discharge from the nostrils which often entirely closes them. The afflicted fowls breathe with a noise in their throats like snoring. Their heads do not swell and they appear perfectly healthy otherwise, but hardly eat anything and don't seem to have very much ambition. I have been feeding them barley, wheat and corn and they run loose. Their coop is well ventilated. It is a little damp inside from the recent rains but last year it was quite wet inside and chickens showed no ill effects. I have lost two of my heaviest hens which were laying. They apparently strangle to death. About half my flock have the trouble and I have separated them from the others. I would be very glad if you could tell me something I could do for them.—Subscriber, Simi.

Your hens have bronchitis, a kind of cold which is usually caused by exposure to cold, drafts and dampness. The dampness in their coop may have been a sufficient cause, and it may be there are cracks in the wall or leaks in the roof, or that the coop stands in a place that is badly drained. If the water stands in puddles for any length of time after a rain or the coop is in a hollow where the cold, damp air settles these might easily be additional causes. Drainage is extremely important, especially in bad weather. Some hens are more susceptible to such conditions than others, and all hens are more susceptible at some times than at others. The fact that they were able to stand a damp house last year is no guarantee that they would not succumb this year. The first step in treatment is to put the sick birds in a dry, sunny place. It may be this will be sufficient to effect a cure. If half the flock are affected it will be difficult for you to follow out the treatment recommended in "Poultry Diseases and Their Treatment":

Place the patient in a warm, dry, well ventilated but not drafty room. Feed bread or middlings moistened with milk and add to this food two grains of black antimony twice a day. A demulcent drink may be made by steeping a little flaxseed in water. Flaxseed tea, you know, is one of the best remedies for a bronchial cold for anybody. Dr. Salmon recommends ten drops spirits of turpentine in a teaspoon of castor oil given in two doses five or six hours apart. You could hardly treat a whole flock in this way, but you might treat a few of the worst cases. The others will probably recover without treatment as soon as they are in a thoroughly dry sunny place. Quinine is sometimes given for bronchitis, one grain for a full grown hen, but its value is doubtful. Olive oil is always good.

Raising Ducks

I am contemplating raising a few ducks on my ranch and would appreciate it very much if you would answer the following questions for me: Would duck raising be profitable with a large acreage in alfalfa available for pasture? Is there sufficient market for green ducks in Los Angeles? Are Mammoth Pekins a good variety to raise? If so, kindly give me the addresses of some breeders of these ducks, either in this locality or around Los Angeles and Pasadena if possible. Any information about duck raising would be greatly appreciated.—Subscriber, Hemet.

I am told that there is a very good demand for green ducks in their season in Los Angeles. Last year they sold for around 30 cents a pound, live weight, and a duck man who keeps hundreds of birds told me last week that he could sell every duck he had right at the ranch for 27 cents. Your pasture would come in handy for supplying green feed, but ducks that are raised for the "green" market, which means that they must be pushed as rapidly as possible and marketed at ten weeks of age, are kept in close confinement. The Pekin is the only duck raised for this purpose because it is the only one that can be made to reach five pounds in ten weeks. These ducks, whether adult or infant, are fed altogether on moist mash. For breeders the mash may contain hard grain along with the bran and cornmeal, but baby ducks, from the start till they go to market as green ducks, receive only a soft mash of bran and cornmeal with sand and cut green feed added till they are old enough to eat their green without cutting.

Housing

Please give me information regarding housing plans for chickens. I would like to get housing plans and system of caring for chickens on the small space plan. I think an eight by eight space holds 20 or 24 chickens and they are kept right in that space with no run. If you can give me definite information I will be very thankful.—Subscriber, Modesto.

There are three systems of no-yard housing as practiced in California. In the Charles Weeks house, to which you refer, 20 hens or 25 pullets are kept in a space eight feet square. The house may be any length but it is only eight feet wide and divided into square sections or units which are entirely separated. The front is of wire and the overhanging eaves keep out sun and rain. In the Corning house, which is extensively used in some localities near the coast, 800 or 1,000 hens are kept in one flock, the house being 16 feet wide and 100 feet long, with no partitions. A modification of this plan is found around Los Angeles, by which flocks of from 80 to 150 hens are kept in a unit of sufficient area to allow from three and one-half to four square feet per hen. If you are especially interested in the Charles Weeks house it might be well for you to write the originator himself, Charles Weeks, Palo Alto, for exact measurements.

FARM BUREAU NOTES

At a recent meeting of the regional directors of the California farm bureau it was decided to wage a state-wide membership campaign from December 22 to January 7.

Future farm bureau meetings will be held in Placer County at Roseville, December 22, Mt. Vernon 27; in Shasta County at Whitmore and Millville, 23; Palo Cedro, 24; Fall River, 27; Hat Creek, 28. In San Joaquin County one will be held at Livo Oak December 22. In Napa County four will be held as follows: Soda Canyon, 20; Chiles Valley, 23; Pope Valley, 26; Mt. George, 27.

GRAIN

Wheat: The prices are based upon federal grades and standards at the terminals in San Francisco Bay and Los Angeles, and are as follows, per bushel of 60 pounds:

Hard White—	Per Bushel	Per Cental
No. 1	$2.20	$3.66 2-3
No. 2	2.17	3.61 2-3
No. 3	2.13	3.55
Soft White—		
No. 1	$2.13	$3.63 1-3
No. 2	2.15	3.58 1-3
No. 3	2.11	3.51½
Club and Sonora—		
No. 1	$2.16	$3.00
No. 2	2.13	3.55
No. 3	2.09	3.48½

The above are minimum prices.
For sacked grain add 4½ cents per bushel of 60 pounds to above prices. Deductions of three-fourths of a pound made for weight of standard grain bags. Wheat grading under No. 3 mixed or smutty wheat will be purchased according to merit.
Oats: Red feed, 3.00@3.05; black, 3.00 @3.15.
Corn: California yellow, 3.10@3.20 per cental; Egyptian, 3.65@3.75; milo maize,
Rye: 3.35@3.45.
Barley: Spot feed, per cental, 3.50@ 3.60; brewing, 3.65@3.75.

HAY

Under date of December 20, Scott-Magner & Miller says:
Receipts past week 638 tons. No doubt the great decrease over last week is due to the heavy demand of interior districts for stock feed. Hay is being held in the country districts at figures in excess of the present market. There has been considerable inquiry from the southern part of the state during the week for hay. It is also to be noticed that considerable alfalfa hay has been purchased in Nevada and is being shipped to this state.
Plowing is in full blast on the lands made ready by the recent rains, and although some sections have not received as much rain as they would like, yet there has been sufficient in most places to commence their winter plowing. The market continues firm on all grades and is reported about $1.00 per ton higher than heretofore.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market — for prices to consumers charges of cartage, commission and handling expenses must be added according to conditions:

Fancy Wheat Hay (light 5 wire bales	25.00@27.00
No. 1. Wheat or Wheat and Oat Hay	22.00@26.00
No. 2 Wheat or Wheat and Oat Hay	21.00@23.00
Choice Tame Oat Hay	24.00@27.00
Other Tame Oat Hay	21.00@24.00
Wild Oat Hay	20.00@23.00
Barley Hay	20.00@23.00
Alfalfa Hay	22.00@27.00
Stock Hay	17.00@20.00
No. 1 Barley Straw, per bale	.50@ .80

Citrus Markets

Los Angeles, December 23, 1919.
Valencia shipping is practically ended but with the few yet to go and number in transit there are 300 or 400 cars yet to be sold. Practically all houses are closed and will be until the new year.
The lemon market is gone to nothing or even worse. One auction sale is reported as low as 10 cents a box. This in Philadelphia. All Atlantic Coast points are filled with Mediterranean lemons. There are now nearly 50,000 boxes of these foreigns either on dock or due to land within next few weeks.

Shipments

Shipment of oranges from Southern California to date since November 1, 1919: Oranges, 2,946 cars; lemons, 584; total, 3,530. To same date last season: Oranges, 1,004; lemons, 1,042; total, 1,046. Central California: Oranges, 3,245; lemons, 118; total, 3,363. To same date last season: Oranges, 2,531; lemons, 231; total, 2,762. Northern California: Oranges, 343; lemons, 15; total, 358. To same date last season: Oranges, 191.

Boston: 27 or., 4 lem. Val., 2.55@4.55; Nav., 1.50@5.65; lem., 35@1.15.

The principal change in prices of the past week has been the drop of lettuce to $1.25 a crate, while cauliflower is down to $1.10 to $1.15 a crate, the sizes being very small, due to cold weather. Sweet potatoes are firm at $2.75-$3.00, with a tendency toward $3.25 in the near future as the supply is short. The strongest upward rise during the past week has been on potatoes, which are $4.50-$5.00 in carload lots, wholesaled at $5.50 to $6.00, and must cost the consumer seven or eight cents a pound. The California crop is one-third short of normal, and Oregon, from which we usually receive many potatoes, suffered a 25 per cent loss from freezing in the field. Receipts in Los Angeles for the past two weeks have been less than the demand.

Citrus Growing In California

A 5-16 of an acre plot of Orange Trees at Corona, fertilized with

NITRATE OF SODA

and acid phosphate at 320 lbs. of each per acre, yielded at the rate of 411 boxes of high quality fruit. A plot alongside, fertilized without Nitrate, gave a rate of yield of only 322 boxes per acre of inferior fruit. This difference of rate of yield of 89 boxes per acre shows an increase in value of produce equivalent to $324.85.

100 lbs. of Nitrate of Soda in this case added a rate of profit to the grower's income of $101.52 per acre.

Chilean Nitrate Committee
231 Douglas Building
Los Angeles California

The Famous Hardie Junior is a Real Power Sprayer

It has sufficient capacity for two lines of hose. It has plenty of power for high pressure effective spraying. It is little in first cost, weight, and upkeep. It is big in real value, engine power, pump capacity and ability to do successful spraying. We believe this is the greatest small power sprayer ever manufactured, and placed on the market with phenomenal success in every fruit section in United States and vouched by thousands who own the Famous Hardie Junior. Equipped with 1½ horsepower engine, Magneto ignition, 150-gallon tank with mechanical agitator, capacity of four gallons per minute with a steady working pressure of 200 pounds, and two 25-foot of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

All for $340.00. ***Delivered anywhere in this state***

If truck is not needed, deduct $55.00.
These prices are subject to change without notice. The wise buyer will place his order now.
This low price is made possible by big production.
If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer.
The HARDIE ORCHARD GUN is $12.00, none better. Every one is guaranteed to give satisfaction to the user, or his money refunded.
The Hardie Spray Hose is the safest hose to buy.

America's Pioneer Dog Medicines

Schilling Tea, fine as it is, costs less per cup than any other tea we know of, and surely less than any tea selling at a lower price.

It costs a lot of money—the biggest part of the price you pay for tea—to get tea to you from the tea-plant.

So why pay that good money and get only common tea?

Schilling Tea costs more per pound but less per cup.

There are four flavors of Schilling Tea—Japan, Ceylon-India, Oolong, English Breakfast. All one quality. In parchmyn-lined moisture-proof packages. At grocers everywhere.

Household Department

THE OLD YEAR AND THE NEW

Somebody went away last night, when all
was dim and dark,
The hall clock slow, the lamplight low,
the fire but a spark,
The chamber chill, the nursery still, a
ghostly moon agleam,
In every bed a sleepyhead, in every heart
a dream.
Somebody tiptoed softly out, his bundle
on his back,
And good and glad and queer and sad the
contents of that pack:

The things you did, the things I did, the
things we hoped and thought,
The things we oughtn't to have said, the
other things we ought;
The smiles we smiled, the sighs we sigh-
ed, the little schemes we schemed,
The laughs we laughed, the tears we
cried, the little dreams we dreamed,
And all the rest a gaunt, gray guest had
gathered in his sack—
The Old Year, the bent year, and he
never will come back.

Somebody else crept in last night, when
the door was left ajar,
A tiny stranger, slim and slight, who had
not traveled far;
A curious empty bag he bore across one
dimpled shoulder,
And in it many a treasure'll go before
he's one day older:
The things you'll think, the things I'll
think, the doings that we'll do,
The words you're going to say to me, the
words I'll say to you;

The time we'll use, the time abuse, the
plans we'll make and break;
He'll peep around till each is found, and
every one he'll take;
The New Year, the Young Year. We'll
greet him, but remember,
He may not stay with us alway, and the
last of next December,
When he has gathered what we gave,
then, in the other's track,
Old, too, and gray, he'll slip away,
and he never can come back.
—Nancy Byrd Turner in Youth's Companion.

THE BROKEN PROMISE

By John Clair Minot, in Youth's Companion

THIS is the story of how Billy Brewster lost something that he had set his heart on, and of how he came to make a certain new year resolution that he has kept ever since.

Billy lives with his mother in a little house on the edge of the village of Bayville. As he was walking home from school one day, Mr. Briggs, who owns the cotton mill, came along in his automobile.

"Jump in!" called Mr. Briggs.

So Billy eagerly clambered into the big car, and had his first automobile ride. When Mr. Briggs left Billy near his home, he said, "We will have another ride some day."

Several times after that he gave Billy a ride when he saw him in the village street or overtook him on the way home from school. One day Mr. Briggs said, "I am going over to Denton some day before long. Would you like to take the ride and see the sights?"

Of course Billy would like to go, and he was so happy that he could hardly stammer his thanks. Denton was a large city, 60 miles away, and Billy had never been there. The trip would mean an all-day ride in the automobile, instead of a ride of a few minutes, and he would surely see many wonderful things in the city. He ran breathlessly into the house to tell his mother, and he whistled louder than usual as he did his chores that night.

It was early in the winter, and a few days later the school closed for the holiday vacation. One morning Billy's mother said, "Will you bring the rest of that wood into the shed today, Billy? There is likely to be snow before long."

"Yes," answered Billy, promptly. "I'll do it today."

He began his task with the best intention, but in a few minutes Tom Halsey called to him from the street:

"Come on, Billy! We are all going skating on the mill pond. The ice is fine!"

Billy looked sadly at the woodpile. It could wait, he thought; he would surely do the work tomorrow. He remembered his promise to his mother that he would get in the wood that day, but he thought that he could explain it all when he got back from the mill pond. That is the way he argued to himself as he ran to join Tom and the other boys.

Several hours later he came back from skating, and ran in to tell his mother how it had happened.

She listened in silence, a[nd] hen he was done she said, "I see t was, but I am very sorry t[h]roke your promise, Billy."

"But it was such mise," pleaded Billy. "A I could get in the wood

"A promise i[s] ," said his mother, gentl[y] ttle promise is to be kept , a big one."

"But it d[oesn't]," urged Billy.

"It alw[ays] arm to break a promise." his mother. "In this ca[se] e lost great deal."

"W[hat] mean?" cried Billy.

"A f[ew] ments ago Mr. Briggs called fo[r] on his way to Denton. He is going South for the winter, and s[o] have lost the long ride and the e city."

B[illy] of thinkin[g] he was g[lad] y and whe[n] for making le made one res[olution] as kept ever since. It was about little promises.

NEW YEAR RECIPES FROM CULTIVATOR READERS

Caramel Pie

Two cups brown sugar, two cups milk, butter size of an egg. Put on stove and bring to a boil, then add well mixed:

Ten tablespoons water, eight tablespoons flour, yolks of two eggs well beaten. Cook until thick being careful not to burn. Cool and put in baked crust. Ice with white of two eggs beaten to a froth, one tablespoon sugar. Flavor icing and pie filling with vanilla. Spread icing over pie and set in oven to brown. Be careful not to burn.—Mrs. A. Le Muir, San Bernardino.

Mince Meat

Dear Sirs: I am sending a recipe for mince meat, concocted by me during "war times" when we were conserving sugar, meat, etc., and during the present scarcity of sugar will no doubt be acceptable to many other housekeepers. The small amount of meat used in it keeps it from being a rich dessert such as we always think of mince pie being:

Two cups meat, five cups apples, two cups raisins, one and one-half cups currants, one cup honey or syrup, three cups brown sugar, two cups stock, one pint fruit juice, one ounce citron, one tablespoon salt, one tablespoon cinnamon, one teaspoon cloves, one teaspoon nutmeg, one teaspoon mace, juice three lemons, rind two lemons, pinch of cayenne pepper.

Grape or blackberry juice or liquor from pickled fruits is very good to use for the fruit juice called for. A cheap cut of meat or an old rooster may be used for the meat. Chop meat, apples and raisins fine separately. Mix all ingredients. Let stand half a day. Heat thoroughly. Seal in glass jars. Store in cool place.

Devil Food Cake

Part 1.—Mix the following: One cup brown sugar, one-half cup butter, one cup sweet milk, three egg yolks, one teaspoon soda, two cups flour.

Part 2.—One cup brown sugar, one cup grated chocolate, one-half cup sweet milk, flavor with vanilla.

Cook Part 2 in a double boiler and let it come to a boil. Then cool and mix with Part 1. Bake in layers. Spread with any desired frosting.—Mrs. Joe S. Menezer, Paicines.

Apple Sauce Cake

Two cups sweetened apple sauce two cups sugar, four cups sifted flour, one-half cup ground chocolate, two cups raisins, three tablespoons lard, two teaspoons soda dissolved in apple sauce, two teaspoons baking powder, two teaspoons cinnamon and nutmeg.

Raisins may be omitted or nuts added. This cake is good the day it's baked or may be kept almost indefinitely if raisins are used. It makes an excellent foundation for fruit cake. —Mrs. L. D. W.

Never Fail Chocolate Cake

Two cups sugar, one cup milk, three fourths cup butter, three cups flour, four eggs, two teaspoons baking powder, one teaspoon vanilla.

One-half cake Baker's chocolate, three-fourths cup sugar, one-half cup

milk, yolk one egg. Cook together before adding to the above mentioned mixture.

Frosting for Chocolate Cake: One cup each of white and brown sugar, one-half cup sweet milk, butter size of an egg, one teaspoon vanilla. Boil eight minutes. Beat until light and creamy.—Mrs. H. W. Shephard, National City.

ARIZONA GIRL CANS 240 VARIETIES

By Leland S. Parke

It is not an uncommon thing for the girls in the canning clubs to can 240 jars of products. It is quite a different story when every jar of that number represents a different product.

Such was the achievement of Wyona Taylor, aged 15, of Pima, Arizona, and a member of the Pima United Clubs under the leadership of Mrs. Phil C. Merrill. This is the highest record that has ever been made in the state, although a record of 211 varieties was made the year before by Opal Webb of the same club. It is probably safe to say, too, that this record would rank high among records made in other parts of the United States. The following were among the many fine prizes that Wyona won: (1) Handsome silver cup given by the state fair association for the best variety exhibit at the fair; (2) Hall canning outfit, given by the Hall Canning Company of Grand Rapids, Michigan, for the best variety record in the state; (3) free trip to the University of Arizona by the Arizona Bankers Association for her unusual achievement, this trip to be taken in connection with the Boys and Girls Club Congress to be held at Tucson January 15-17; (4) membership in the Arizona All Star Club,, an affiliated organization of the national club (this award made by the committee on All Star membership); (5) a $5 War Saving stamp, given by the Pima farm bureau, for being the most helpful, sportsmanlike member in the club; (6) and last but not least, she has been recommended for the Perfection All Star Medal, which represents the award of highest honor in boys and girls club work.

Wyona has been an untiring worker throughout the season and if the Pima United Club does not win the state championship it will not be her fault. Her work has been carried on under the auspices of the agricultural extension service of the university and the United States department of agriculture cooperating. It is through the encouraging of such achievements and other achievements on the farm and in the home that the agricultural extension service hopes to help the agricultural interests of the state.

GOING OVER THE SHABBY SPOTS

House cleaning is too frequently limited to scrubbing the woodwork, beating the carpets and brushing the furniture. Need of renewals is generally overlooked—sometimes because of the expense involved, sometimes because the housewife does not realize how easily she could do the work herself, and sometimes because she doesn't think of it.

In every house are to be found many things made of metal which become tarnished and shabby. Such things as andirons, water faucets, etc., can be gone over with a little metal lacquer and made to look like new.

Picture frames, chandeliers and other articles which were originally gilded or gold enameled can be easily and quickly renewed with a little gold enamel. It is better to get that sold in combination cans ready for mixing with a little brush with which to apply it. Gold enamel will also vastly improve the appearance of tarnished radiators.

Even the shabbiness of the leather chairs may be removed with leather renewer with which the worn spots may be touched up.

All of these re-vampers and renewers are to be found in drug, paint and general stores. They are obtainable in small packages, cost very little and are easily applied. One cannot realize how greatly their use improves and brightens the appearance of the home at house cleaning time.

HELPFUL IN THE HOME

By A. M. H.

There is nothing more helpful in the home than a bottle of good olive oil. It will help to keep all the family in good health, if used daily, as it is recommended by many specialists both as a food and as a tonic. For delicate children mothers will find a free use of the nutritious olive oil invaluable. Not only should it be taken as a tonic, but if there is any tendency to weakness of lungs it should frequently be rubbed into the chest. Olive oil taken internally arouses a torpid liver. In time of croup it can be given frequently and will not disturb the digestion, as do many medicines. Sufferers from nervous disorders should certainly try the olive oil cure. It is often given in place of cod liver oil and it is as effective in building up the system and far less disagreeable.

Excellent results are obtained by applying a fattening cream made from equal parts of lanolin, coco butter and olive oil. A few drops of a preferred perfume may be added.

If troubled with eczema use a plentiful supply of olive oil to which has been added dry sulphur. If used regularly it will cure some of the worst cases in a short time.

One of the safest and best household antiseptics is a boric solution, and this can easily be prepared at home by dissolving one-half ounce of granulated boric acid in one pint of boiled water. A bottle of this solution well corked is useful in bathing sore eyes and is especially good to use after taking long automobile rides in the cold and wind, and toothache often yields to a bit of cotton saturated with it. A little olive oil and a little of this solution added to the water used for bowel injections both for children and grown people adds greatly to the beneficial effect.

Keep plenty of dishes filled with water about the yard if you want bird neighbors.

Instant heat—
when and where you want it

Pearl Oil in a good oil heater, brings instant comfort at the touch of a match. No smoke, no odor, no dust, no dirt. Clean and economical.

Pearl Oil is refined and re-refined to be pure and clean burning. Sold in bulk and five-gallon cans. Order by name—Pearl Oil.

We recommend Perfection Oil Heaters.

STANDARD OIL COMPANY
(CALIFORNIA)

Own a "Selected" Farm in Western Canada

Make Bigger Profits!

THE most wonderful opportunity in the world for Business Farmers is in the "SELECTED" FARMS which can be bought for $15 to $40 an acre along the lines of the Canadian National Railways in Western Canada.

"Selected" Farms

These "SELECTED" Farms are carefully chosen from the cream of the richest wheat and cattle country in America, to meet your special needs, on the advice of experts representing 14,000 miles of railway, whose assistance, though free to home seekers, is of great practical value.

A Cordial Welcome

Western Canada extends a helpful hand to home seekers. Friendly neighbors, with the same customs and language—splendid schools, churches and social life—every benefit that you formerly enjoyed and many advantages that you could not get from higher priced land elsewhere—warm, sunny, growing summers and dry, cold, healthy winters—await you in this wonderfully prosperous "LAST WEST."

Taxes Are Low

Western Canada taxes fall lightly on the farmer. A small tax on land, but buildings, improvements, animals, machinery and personal property are all tax exempt.

Big Profits in Wheat and Dairying

Western Canada is famous for its big wheat yields. "SELECTED" FARMS along the lines of the Canadian National Railways average more than 20 bushels of wheat to the acre. Under specially favorable conditions a yield of 50 to 60 bushels per acre is not uncommon.

Dairying is exceptionally profitable. That soil and climate are well adapted to it is shown in greatly increased production and high quality maintained. A world-wide market awaits all that Western Canada can produce.

Fortunes from Beef and Dairy Cattle

Western Canada, the Cattle Man's Paradise! Beef and dairy cattle yield great profits. Stock thrive on the prairie grasses, which in many cases cure standing and make fine hay. Cattle and horses require only natural shelter most of the weather, and bring high prices without grain feeding.

Easy Terms

Terms on "SELECTED" Farms: About 10 per cent cash down, balance in equal payments over a term of years; interest *usually* 6 per cent.

Special Rates to Home Seekers

Special railway rates will be made for home seekers and their effects to encourage personal inspection of the Farms along the lines of the Canadian National Railways. Rates and full information will be sent free on request. *Write or mail coupon TODAY!*

FUTURE OF NEW FRUITS

Continued from Page 859.

necessarily be restricted until more stock is available.

Another fruit commanding more or less attention in the ever increasing list of California horticultural productions is the date. With the introduction of the better varieties the growing of this fruit has reached quite extensive proportions in the Coachella Valley and gives promise of being very remunerative. Every one is familiar with the imported dates carried in stock by all fruit stores, but the product of these new varieties now being grown here is far superior and commands much higher prices.

The jujube, or Chinese date as it is sometimes called, is a recent introduction that is commanding some attention and gives promise of being wortby of quite extensive planting. Unlike the date palm, the jujube is a tree of rather pleasing appearance, entirely hardy and very productive. The government plant introduction garden at Chico has a number of trees fruiting and some of the larger varieties seem quite promising. As a fresh fruit to eat out of hand it can not be said to be very attractive but when processed it reminds one very much of the date excepting that its acid content gives it a more attractive flavor. When better known it will no doubt become an important horticultural production. The trees are said to thrive on all varieties of soil and do not require a great deal of moisture. The trees are carried in stock by the leading nurseries but at present only in limited quantities.

We recently made reference to the excellent report made by Manager Schureman of the Anaheim Citrus Fruit Association. We said that 184,511 loose boxes averaged net to the grower $241. This is some sizable average and we hasten to correct, as the decimal was omitted between the two and the four. $2.41 per loose box is the average secured for the Anaheim orchardist.

FROSTED GRAPES

Director Hecke reports regarding an experiment tried in Tulare County to test out the keeping qualities of Emperor grapes after the severe freeze of the last week in October:

Considerable argument was used at that time as to the degree of frost injury necessary to prohibit the packing of this fruit. As it required several days for slight injury to develop, Commissioner Collins feared to draw the line too tightly at first, but placed in cold storage a sample crate taken from a lot which was being packed for Eastern shipment. At the same time he had packed for experimental purposes a crate of more severely injured fruit. These crates were placed in cold storage October 30 and opened 30 days later. Both were in very bad condition, the more severely injured fruit not being edible at all, while 90 per cent of the better grade had stems covered with mold and there was much soft fruit.

Mr. Collins' office is also conducting some experiments with grapes packed in drums under various conditions, but these will not be opened until the holiday season as they are supposed to keep until that time in many cases when shipped.

CATTLEMEN ELECT OFFICERS

At the meeting of the California Cattlemen's Association held at San Francisco, Saturday, December 13, Fred H. Bixby of Long Beach was elected to succeed L. A. Nares as president. D. J. Stollery was re-elected secretary and the following vice presidents were elected to represent the various zones: M. D. Lack, Redding; T. H. Ramsay, Red Bluff; John Bryan, Hollister; A. S. Goode, Bakersfield, and Harry Jones, Brawley.

WHAT WORRIED HIM

"Are you sure your voice will fill this large hall?" asked the friend.

"I only hope," sadly replied the amateur singer, "that it won't empty it."—Jacksonville Times-Union.

My K Hand Stump Puller

Gives Your Hand 96,000 Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER

K Stump Puller

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not* work

Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

Special Offer We are making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write us today for full information and for free book on Land Clearing and about our Wonderful Drag Saw.
